Petitioners do not dispute the substantial discrepancy between the invoiced value of the imported jewelry and the declared value. However, they contend that the failure to declare all of the merchandise immediately upon arrival was the result of jet lag, disorientation, and a language barrier. Petitioners allege that the commercial invoices covering the initial declaration were given to [redacted] by petitioner [redacted] that [redacted] arrived at the weighing station sometime after the others, and subsequently gave his invoices (covering the balance of the jewelry) to [redacted] who then attempted to submit them to the Customs inspector before he weighed the shipment. Petitioners allege that the inspector refused to accept the additional invoices before the weighing took place. The concerned inspector states that he accepted the completed entry form

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A3

653374

and invoices from [redacted] at the baggage counter, with the understanding that it was complete and represented the entire shipment of jewelry. Both petitioners were present when it was submitted. The inspector states that he then advised he was going to weigh the merchandise, and escorted the petitioners and [redacted] to an office for that purpose. Upon finding the office locked, he left for several minutes to obtain a key, and upon return proceeded with the weighing process. He advises that he does not recall any of the individuals offering additional invoices before he weighed the shipment. However, after the discrepancy was noted, he recalls that [redacted] advised that there was a misunderstanding and that one of the petitioners at that time removed six (6) invoices from his bag covering the additional jewelry. (While there appears to be some confusion in the recitation of events as to who submitted the additional invoices, the petitioners claim, and so it appears from the record, that it was petitioner [redacted] who produced these documents.)

Petitioners' claim that a language barrier was partially the cause of the difficulty is not accepted. True, an interpreter was needed to interview petitioner [redacted] who is an Italian resident. However, it was petitioner [redacted] a British subject, who had the additional invoices in his bags and did not produce them upon entry. This petitioner had no difficulty with the English language.

Furthermore, whether or not petitioners attempted to submit the additional invoices to the inspector at the weighing room before the weighing took place is, we believe, irrelevant. Petitioners had already discussed the entry with their broker, and the Immediate Delivery Application with supporting invoices reflecting only part of the shipment had been prepared and submitted to the inspector. The latter accepted the entry with all parties present with the obvious understanding that the entry represented the entire shipment. A period of time passed during which the inspector advised that he was going to weigh the jewelry, and escorted the three gentlemen to the weighing room. Additional time was expended while the inspector obtained the key to the room and returned to unlock the door. Assuming, arguendo, that petitioners submitted the additional invoices upon the inspector's return and before the merchandise was weighed, at this point in time petitioners would have been aware that the discrepancy was going to be revealed upon weighing the merchandise. Therefore, they would have nothing to lose by disclosing the violation before the jewelry was actually weighed. In any event, whether petitioners had attempted to submit the additional invoices before or after the merchandise was weighed, at either point in time the false entry had already been filed with Customs.

We also find it difficult to believe that in making entry through the broker petitioner [redacted] would inadvertantly omit listing approximately two-thirds of the imported shipment, some $400,000 worth of jewelry, when in fact he had six (6) invoices covering such merchandise in his possession.

The record also shows that upon interview on the date of the seizure, petitioner [redacted] stated through an interpreter that this was the first time he had brought in merchandise. However, in an affidavit [redacted] states that he was aware that both petitioners had previously delivered Italian jewelry to the same consignee. He also alleges that prior to arrival

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

065374

of the passengers, he advised a Customs inspector at LAX by telephone that a shipment of gold chains with an approximate value of $500,000 would be arriving from England on board a particular flight, and as broker, he would be there for the purpose of meeting the shipment and assisting in its processing.

While there is no verification of the telephone call, we note that if [redacted] was aware of the approximate value of the shipment, why did he not question petitioners when they presented invoices to him for jewelry valued at only $203,000?

In summary, the record shows that petitioners made entry for gold jewelry with commercial invoices reflecting a value of $203,015, and a weight of 31,299.5 grams, when in fact they had in their possession invoices reflecting a value of $629,053 and a weight of 98,728 grams; that petitioners had ample time to make proper entry and engaged the services of a customhouse broker for this purpose; that petitioners have previously imported gold jewelry into the United States and therefore are not inexperienced in Customs matters; and that no language barrier prevented petitioner [redacted] from understanding Customs requirements and submitting his invoices to [redacted] or the Customs inspector for proper entry.

In accordance with your finding, these facts reflect that the violation was the result of gross negligence, for the reason that petitioners acted with actual knowledge of or wanton disregard for their obligations under the statute. The statutory penalty in cases of gross negligence is an amount not to exceed (in this case) four times the loss of revenue, or $168,711 (4 X $42,177.76).

You recommend no relief from the assessed penalty.

We concur. Under the circumstances, relief from the monetary penalty of $168,711 is denied.

Please advise petitioners through counsel of this decision, and include a copy of our letter with your notice.

Sincerely,

Donald W. Lewis
Director, Entry Procedures
and Penalties Division

TO : District Director of Customs
Baltimore, Maryland 21202

FROM : Director, Entry Procedures and Penalties Division

SUBJECT: Settlement of Civil Liability Assessed Pursuant to Title 19, United States Code, Section 1592, of [redacted] Case No. 77-5401-10803 and J.F.K. Area Case Nos. 76-4701-00081 and 77-4701-02174

In our memorandum to you dated September 26, 1983, (652398 BNS) a copy of which is enclosed, we indicated that certain jewelry seized from [redacted] and stored in your district could be returned: upon receipt of a certified check for $85,000; upon advice from the United States Attorney, E.D.N.Y., that the jewelry was no longer needed as evidence in connection with an ongoing criminal proceeding, and; provided that Customs had not been prevented from releasing the jewelry through receipt of a court order or writ of attachment. Subsequent to our initial memorandum your office was orally informed by us that the above conditions could not be fulfilled by October 3, the date initially set for release, because the criminal proceeding would not be concluded by that time.

Please be advised that the United States Attorney's office has now informed us that the criminal proceedings were recently concluded. Accordingly, there appears to be no impediment to releasing the jewelry. In this regard, Mr. Perregoy of your staff has orally indicated that it would be convenient to release the jewelry on November 7 at 11:00 A.M. Therefore, assuming that you are presented with a check for $85,000 and are not judicially prevented from releasing the jewelry, it may be returned to [redacted] or his representative on November 7.

[redacted]

Dear [redacted]

This is in reply to your letter dated June 26, 1985, whereby you confirmed the offer by [redacted] (hereinafter [redacted]) to settle pursuant to title 19, United States Code, section 1617, the potential civil penalties arising as a result of a Houston grand jury investigation of the company's steel importation during the period of July 1, 1980, through June 30, 1982.

Specifically, the amount of $2,400,000, has been offered to settle "any and all liabilities arising out of possible violations of 19 U.S.C. 1592 relating to 77 entries" described in paragraphs (a) through (f) on pages 2 through 3 of the above letter (hereby incorporated by reference). Upon acceptance by the Customs Service, the check for $2,400,000, will be delivered to the Customs Service on the day that the plea is entered in the related criminal proceeding.

In addition to the offered amount of $2,400,000, you state that as further conditions of the settlement, [redacted] will provide:

A schedule identifying the entries covered by the grand jury investigation;

The specific 77 entries encompassed by the subject settlement and indications of the violations related thereto, along with a schedule of their f.o.b. values and resale invoice numbers;

A copy of the "Supplemental Proffer In Re the Matter of Grand Jury Investigation of [redacted] relating to the nine entries to which [redacted] will plead guilty under title 18, United States Code, section 1001;

An agreement to an order under Fed. R. Cr. P. 6(e)(3) for disclosure of the grand jury documents to Customs; and

A waiver of the statute of limitations dated July 1, 1985, with respect to the 77 entries covered by the instant settlement offer.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A1

You also advise that [redacted] recognizes that any information provided will be subject to verification by the Customs Service.

In accordance with the specific conditions set forth above and in further detail in your letter dated June 26, 1985, the offered amount of $2,400,000, is accepted for settlement of the potential civil penalty claims with respect to the 77 entries described above; provided that the check for the above amount is delivered to the Customs Service Headquarters on the same day that the plea is entered in the United States District Court for the Southern District of Texas in the related criminal proceeding.

Sincerely,

/s/ Donald W. Lewis

FEB 12 1985

ENF 4-02.2 CO:R:E:C
653755 SLG

653755

Dear [redacted]

This is in response to your letter dated November 26, 1984, concerning Customs' continued seizures of wearing apparel in Miami, to which your client, [redacted] (hereinafter, [redacted] has claimed an ownership interest (Miami Seizure Case No. 84-5201-00282.) The shipments of wearing apparel, which consisted of textile products subject to quota and visa requirements that had been smuggled into the United States, were seized pursuant to title 19, United States Code, section 1592 and title 18, United States Code, section 545.

In our previous response to your inquiry concerning the above seizure you were advised that there was insufficient evidence establishing your title to the above goods prior to the dates of the seizures. We concluded that the evidence of record indicated that the contracts governing the purchase of the goods by your client, [redacted] from the seller, [redacted] called for delivery to [redacted] and that inasmuch as tender of delivery had not been made within the meaning of U.C.C. 2-503(1), at the time of the seizures of the shipments in Miami on January 24 and 25, 1984, and in accordance with the criteria set forth under U.C.C. 2-401(2), title to the goods had not passed to [redacted] Contrary to your present contention, however, the Customs Service did not conclude that because full payment had not been made for the goods, [redacted] did not have title to the goods seized in Miami. It was concluded that although the time of [redacted] payment for the goods was relevant to the parties' intent regarding the passage of title, there was insufficient evidence that full payment in fact had been made for the goods.

You also now contend that the position that title to the goods had not passed to [redacted] because delivery of the goods had not been accomplished in accordance with the terms of the purchase orders, was erroneous. As we understand your present contention, the fact that the contract provided for a "landed" price sales transaction, signified the parties intended that title pass to [redacted] at the moment that the shipper, through its agent, notified [redacted] that the goods were available for delivery from the warehouse.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A9

It remains our opinion that title to the shipments of wearing apparel under seizure in Miami had not passed to [redacted] by the time the goods were seized. You concede that a "landed" price purchase transaction would require that a seller such as [redacted] "ship the merchandise to the United States, enter and clear the merchandise through Customs and comply with all relevant laws and regulations." In this case, however, [redacted] obviously did not comply with the terms of "landed price" sale even under your interpretation, inasmuch as proper entry of the goods had not been made through Customs. Nevertheless, you claim that legal title to the goods still had passed to [redacted] with respect to the subject smuggled goods. More significantly, the Supreme Court decision, Hoover & Allison v. Evatt, 324 U.S.652, 660 (1945), cited in your letter not only held that the components of a "landed price" included the contract cost of the goods at the point of origin, charges for ocean freight, marine and war risk insurance and United States Customs clearance, but the Court also held that landed price included "the expense of arranging for transshipment from the port of entry [to the purchaser at the designated place for delivery.]"

It is our position that the contracts governing the sale by [redacted] of the seized wearing apparel to [redacted] specifically called for delivery of the shipments to New York. This determination was not based upon the "shipped to" provisions of the purchase orders. We indeed are aware of the principle of law that the "ship to" provision has "no significance in determining whether a contract is a shipment or destination contract" and that a "ship to" address must be supplied to the seller in any case in which carriage is contemplated [noted in Electric Regulator Corporation v. Sterling Extruder Corporation, 280 F. Supp. 550, 557 (D. Conn. 1968) and Eberhard Manufacturing Co v. Brown, 61 Mich. App. 268, 232 N.W. 2d 378 (1975) cited in your letter]. Rather, as stated in our previous letter to you on this matter, the fact that the price was a "landed" price coupled with the existence of specific terms in the delivery section of the contract, citing dates for delivery in New York, formed the basis for our conclusion that the contract covering the subject shipments was a "destination" contract. Thus, in order for title to have passed otherwise than at the time physical delivery to New York was accomplished, the subject contracts must have so explicitly provided.

The contract relating to [redacted] purchases from [redacted] on a "landed price" basis is contrasted to the F.O.B. "shipment" contract between [redacted] and [redacted] (hereinafter [redacted]) also reflected in the records. In

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A10

653755

the [redacted] contract, the terms of sale specifically provide for an F.O.B. price of $28.00, and a delivery date of July 25 through November 30, 1983, at "Thailand," even though the "shipped to" provision specified, "New York". Unlike [redacted] contract with [redacted] its contract with [redacted] did not require [redacted] to "deliver" the goods to the "shipped to" destination specified: "New York". Thus, we indeed would have recognized that title to the goods covered by the [redacted] contract passed to [redacted] at the time and place of shipment of the goods (U.C.C. 2-401(2)(a)).

In view of the express provision of U.C.C. 2-401(2), specifying when title passes to a purchaser of goods in the absence of explicit agreement to the contrary, the issue of whether full payment had been made is only remotely relevant to the subject seizures. Nevertheless, you still have not substantiated that [redacted] in fact had paid for the seized shipments in full prior to the dates of the seizure. Although you have provided copies of wire transfers to [redacted] in the respective amounts of $75,000, $200,000, and $70,000, date-stamped as received on December 19, 29, 1983, and January 24, 1984, respectively, there still is no evidence as to which shipments these payments pertained.

Hence, although you submit that the amount of $80,606, which we cited as unpaid [redacted] charges in our previous letter, actually pertained to different merchandise, at the same time there is no evidence that the $345,000 amount, actually pertained to the shipments under seizure in Miami. It remains our opinion that any representations by [redacted] as to its lack of ownership of the subject seized goods are self-serving since [redacted] and [redacted] allegedly were responsible for the smuggling and attempted smuggling of the goods into the United States, a matter still under criminal investigation.

We, however, have been advised that the Assistant United States Attorney handling the criminal investigation of the smuggling of the subject goods will not seek forfeiture of the goods. We also recognize that the fact that [redacted] has repeatedly claimed that it has been paid for the goods and has no ownership interest therein demonstrates that the continued seizure of the goods would not penalize [redacted] for its violation of section 1592.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

All

653755

Therefore, in view of the foregoing circumstances and the equities involved, we are authorizing the release of the goods held under Miami Seizure Case No. 84-5201-00282 to [redacted] for export only under Customs supervision, provided; that (1) [redacted] agrees to hold the United States and its officers and employees harmless with respect to any matter relating to the seized goods; and (2) samples are provided from the seized shipments to the United States Attorney, as necessary, for the criminal proceedings.

Sincerely,

(Signed) Edward T. Stevenson
Acting

John M. Walker, Jr.
Assistant Secretary
(Enforcement and Operations)

[redacted]

Dear [redacted]

This is in response to your letter dated February 26, 1985, whereby on behalf of [redacted] you tendered the amount of $175,000, for our consideration pursuant to title 19, United States Code, section 1617. The offered amount is submitted as a full settlement of "all sums and amount of whatever nature, including without limitation, penalties or damages of any kind...,relating to any of the entries involved" in Ogdensburg District Case No. 83-0701-50019.

We are advised by the District Director, Ogdensburg that he is aware of no other claims relating to the subject entries. We also are advised that the potential loss of duties cited for some of the entries in this case was paid upon liquidation of these entries at the corrected rates. As you noted in your letter, however, the offer in compromise has been made pursuant to section 161.5 of the Customs Regulations. Section 161.5(a) specifically provides that the "offer shall be limited to the civil liability of the proponent in the matter which is the subject of the Government's claim." Thus, the current offer of compromise has been considered only with reference to the claim for monetary penalty and demand for duties that have been assessed pursuant to title 19, United States Code, section 1592 in the above-entitled case.

Upon review of the entire file in this case, including your presentation accompanying the offer, the offered amount of $175,000, is accepted in full settlement of the Customs Service's claims for penalty and duties under section 1592 with respect to the entries in Ogdensburg District Case No. 83-0701-50019.

[redacted] Sincerely,

[redacted] /s/ Donald W. Lewis

Area Director of Customs
Newark, New Jersey 07114

Dear Sir:

This is in response to your memorandum dated March 19, 1985, forwarding a petition dated October 22, 1985, submitted by petitioner, [redacted] The petition seeks relief from a seizure and a claim for a monetary penalty in the amount of $92,115, assessed against petitioner for a violation of title 19, United States Code, section 1592, in your Newark Area Case No. 84-4601-50870.

The penalty claim under section 1592 arose on the basis that petitioner attempted to introduce into the commerce of the United States merchandise by means of false and material entry documents. The documents were false because 900 ladies coats were misdescribed as ladies dresses. The merchandise was invoiced as dresses and had visas indicating quota category No. 436, whereas the merchandise was actually ladies coats with a proper quota category of No. 435. In addition the Government claims it suffered a potential loss of revenue of $446.71.

As we understand the facts, on November 30, 1983, petitioner filed an Immediate Delivery Application, Customs Form 3461, No. 1001-84-701-884-4 reflecting in Block 11 a description of"...900 pcs ladies dress." [redacted] The commercial invoice of the exporter, [redacted] reflected a visa category number of "436". Upon examination of the merchandise by a Customs officer, it was determined that the merchandise was not ladies dresses as described but rather were ladies coats. The proper quota category should have been 435. Accordingly, on December 1, 1983, the 900 ladies coats were seized to prevent the unlawful introduction of the merchandise into the commerce of the United States.

It is reflected in the file that on two previous occasions, penalty notices in the total amount of $25,872 were issued against the petitioner for the same type of violation. The claims were assessed because the shipments of ladies coats were misdescribed as ladies dresses. By letter dated July 9, 1984, the Director, Newark Area, determined that there were negligent violations of section 1592, and mitigated the penalties to $6,468.

It is further reflected in the file that on December 9, 1983, Customs officers visited petitioner and were advised that petitioner received a written opinion from a Customs officer that the garments which are the subject of the current

A14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

penalty case could be classified as dresses. However, petitioner advised then that the opinion was verbal. Moreover, the Customs officer later advised that a sample of the seized merchandise was not the same style as shown by petitioner.

On January 23, 1984, Customs issued a prepenalty notice to petitioner in the amount of $92,115 for violation of section 1592 with a tentative determination of fraud as the level of culpability.

In a meeting on February 3, 1984, petitioner stated to Customs officers that (1) after the two previous violations, it conceded that the merchandise was coats, not dresses; (2) it notified the exporter that it did not want the third shipment (the subject of the current penalty action); (3) it was notified by the exporter that it was too late to cancel the shipment; (4) it sent the exporter a telex dated November 1, 1983, to concel the shipment but that it did not receive a response (petitioner never produced this telex); and (5) it still attempted to make entry because the merchandise represented only a small portion of its volume.

By letter dated March 12, 1984, [redacted], filed a response to the prepenalty notice on behalf of petitioner. It is stated therein that petitioner intended to refuse delivery of the merchandise, had cancelled the order, but the merchandise was included in the same container with garments for a "Spring Program" thereby precluding the possibility of refusal.

On August 1, 1984, Customs issued a "no change" penalty notice. By letter dated October 22, 1984, petitioner filed a petition in response to the penalty notice. Petitioner states (1) it cancelled the shipment after receiving the two previous penalty notices; (2) the shipper included the merchandise in the same container with spring merchandise using a spring letter of credit; (3) concedes that it should not have made entry, but that the documents were processed by an import clerk who was not aware of the importance of this matter and forwarded the documents to the broker for entry; and (4) it never had any intention to import the merchandise under a false category or to deceive the Government.

Upon review of the entire file, it is our decision that petitioner violated section 1592 by misdescribing the merchandise as ladies dresses with an improper quota category of No. 436, whereas the proper description of the merchandise is ladies coats with a proper quota category of No. 435.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B1

653858

Petitioner had actual knowledge that on two prior occasions, it had similarly violated section 1592. Notwithstanding these violations, petitioner made entry and failed to notify Customs. Moreover, petitioner improperly advised Customs agents that it had obtained a written opinion on the merchandise in question. A sample provided to Customs for the opinion was not the same as the merchandise seized. Furthermore, petitioner failed to provide any documentation evidencing cancellation of the shipment in question.

It is our opinion that the evidence establishes that petitioner acted in a fraudulent manner with intent to avoid quota restrictions. Furthermore, we consider the merchandise seized in this case to be a prohibited entry and, therefore, for purposes of mitigation, this case does not involve a loss of revenue.

In accordance with our national guidelines relating to mitigation of assessed penalties, we conclude that the merchandise be released from seizure and the penalty claim be mitigated to $19,930 which represents an amount of 80 percent of the dutiable value of the merchandise ($24,912), provided petitioner exports the merchandise under Customs supervision, and pays storage charges incurred by Customs. If petitioner fails to make payment timely and comply with the conditions of this decision, summary forfeiture proceedings under title 19, United States Code, section 607, (as amended by Pub. L. 98-573, October 30, 1984), should be instituted.

Please notify petitioner of this decision and enclose a copy of this letter with your notification.

Sincerely,

'S/ Donald W. Lewis

[redacted]

Dear [redacted]

This is in response to your letter dated June 14, 1985, in which you submitted an offer in compromise pursuant to title 19, United States Code, section 1617, on behalf of your client, [redacted] involving entries of flanges imported into the United States from and including May 1, 1979, and May 1, 1984.

In the referenced matter, Customs has conducted an investigation with respect to alleged violations by your client of United States laws involving the removal of country of origin markings on the imported flanges during the aforementioned period. You indicate that your client has tendered a certified check in the amount of $250,000 with the District Director of Customs in Houston, Texas, which represents civil penalties and the full and complete settlement of all Customs civil claims and potential Customs civil claims concerning the entries filed during the aforementioned period, <u>except</u> for the 10 percent marking duty due (if any) with respect to these entries, as specified under title 19, United States Code, section 1304(c). Also, upon acceptance of the subject offer, your client has agreed to provide Customs with the documentation and information as set forth in Exhibit A attached to your June 14, 1985, letter.

After careful consideration of the record in this matter, and the terms of the proposed settlement, we hereby accept the subject offer. The terms of the settlement as described in your letter and accompanying Exhibit A are incorporated herein by reference.

Sincerely,

[redacted]

DATE: 28 JUN 1986

FILE: ENF 4-02.2 CO:R:E:C
653941 SLG

653941

TO : District Director of Customs
Boston, Massachusetts 02109

FROM : Chief, Commercial Fraud and Negligence Penalties Branch

SUBJECT: Settlement of Prepenalty Claim Against Medical Devices of Fall River in Boston District Case No. 84-0401-50293/1

Please be advised that the claims involved in the above entitled penalty case have been settled by the Stipulation For Dismissal entered on June 14, 1985, in United States v. Medical Devices of Fall River, No. 84-1835-C (D. Mass.).

By letter dated November 13, 1984, the Assistant Secretary of Treasury (Enforcement and Operations) authorized the Assistant United States Attorney handling the above case to include the potential section 1592 penalty claims against Medical Devices in the settlement of the civil action. Medical Devices had offered the amount of $100,000, to settle all pending claims by the government due to its poor financial condition. Authorization to include the Customs service in the above settlement was granted on the condition that the company's financial condition was as poor as represented and provided that the Customs Service share of the $100,000, was no less than the $28,791, in marking duties not assessed because of the company's alleged violations of section 1592. Last October 1984, Headquarters Regulatory Audit Division reviewed the company's financial data for fiscal years 1982 and 1983 and concluded that at year end September 30, 1983, the company would have had current assets of only $26,608 and that the $100,000 offer over a period of three years appeared acceptable if the company's financial situation had not changed materially in fiscal year 1984.

In May of this year, the Assistant United States Attorney began negotiating the exact terms of the settlement agreement, which provided for payment of the $100,000, over a period of four years with 8 percent interest. At that time, we were advised that Customs total share of the settlement would be $34,944. We also were advised by the United States Attorney that the company had represented that its current financial

B4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

condition was worse than before and that submission of its latest financial statements reflecting such would be a condition provided in the stipulation for dismissal. Thus, in accordance with the previous authorization from Treasury, the stipulation for dismissal was drafted to include the Customs claims in Boston District Case No. 84-0401-50293/1.

Attached is a copy of the Stipulation For Dismissal of the complaint against Medical Devices approved by the United States Magistrate on June 14, 1985, which settles the Customs claims pending in Boston District Case No. 84-0401-50293/1 (paragraph 6). Also attached is a copy of a letter dated June 4, 1985, from Assistant United States Attorney [redacted] to [redacted] outlining the specific shares of the recovery by DLA, GSA, and Customs: DLA and GSA to receive $44,928, and Customs to receive $34,944.

The actual payments by Medical Devices pursuant to the stipulation will be made to the collections department at United States Attorney's Office. Please forward copies of the above stipulation and letter to the regional financial management office so that appropriate action may be taken to ensure that Customs receives credit against the above penalty case for the amount of $34,944, which will be paid over a period of four years.

/s/Edward T. Rosse

District Director of Customs
Honolulu, Hawaii 96806

Re: Petition on Behalf of [redacted] for Relief from a Monetary Penalty of $27,854, Assessed Under Title 19, United States Code, Section 1592; Case No. 85-3205-00604

Dear Sir:

This is in reference to your letter dated July 26, 1985, concerning the above-captioned matter.

The record reveals that petitioner arrived at Honolulu Airport on March 4, 1985, and presented a Customs Declaration which reflected the total value of goods purchased or acquired abroad as $500. Upon secondary examination, petitioner was specifically asked if she had purchased or was given any jewelry, to which she responded in the negative.

Upon examination, two pro forma invoices for the same commercial shipment of pearls were found. One invoice reflected the total cost of the shipment at $8,837, and the second at $22,713 (converted from yen). Petitioner then brought forth the invoiced pearls from a bag she was carrying, and advised that the higher priced invoice represented sample prices from another company. She was permitted to amend her declaration and declared the pearls at a value of $8,037. The actual price paid for the pearls was found to be $22,713, as reflected on one of the two discovered invoices.

As a result of the violation, a potential loss of duties totalling $305.26 was sustained. The pearls were seized as security for payment of a monetary penalty, but have now been released upon deposit of $3,053.

Counsel advises that the owner of the pearls is the [redacted] and that in importing the merchandise from Japan, [redacted] was merely doing a favor for the owner, who had purchased the items.

In an affidavit, petitioner claims that she verbally declared the jewelry and since she was inexperienced in Customs matters, asked the Customs official for assistance in fulfilling the required procedures. She contends that she did not conceal the merchandise nor did she intend to

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B6

653971

mislead Customs officers regarding the value of the merchandise, nor did anyone else request that she do so. The owner of the [redacted] also advises that he had no knowledge that the seller was providing two conflicting invoices.

Petitioner's explanation as to the circumstances do not reconcile with the facts as described by the involved Customs inspector. As noted above, petitioner failed to declare the pearls when asked about the presence of any jewelry, but finally showed the inspector the merchandise only when the invoices had been found upon examination of petitioner's handcarry. While petitioner was allowed to amend her Customs declaration, she refrained from declaring the true purchase price of the merchandise as reflected on the higher-valued invoice by falsely stating that this invoice did not relate to the subject pearls. She then declared a much lower value as the price paid for the pearls.

Under the circumstances, we concur with your finding that the violation was the result of a deliberate intent to defraud the United States of lawful revenues. Accordingly, also in concurrence with your recommendation, the monetary penalty is mitigated to $3,053.

Please advise petitioner, through counsel, of this decision, and include a copy of our decision with your notice.

Sincerely,

/S/ Donald W Lewis

[redacted]

Dear [redacted]

This is in reply to your letter of February 11, 1976, regarding the trademark "Jarlsberg" owned by Norske Meieriers Salgssentral (Norwegian Daires Sales Association) and recorded with United States Customs (COP-4-R:E:R) dated July 10, 1974).

Your letter states that a cheese from West Germany marked [redacted]" is being or may be imported into the United States. You indicate the owner of the recorded trademark has reason to believe this mark is an attempt to simulate the Jarlsberg trademark and request that Customs deny entry to shipments of [redacted] cheese. Recently, a shipment of cheese bearing the [redacted] mark was detained by Customs pending final determination of this trademark issue.

After examining both marks, we have concluded that [redacted] does not copy or simulate the mark recorded with Customs within the meaning of section 133.21 of the Customs Regulations (19 CFR 133.21). The similarity of the last syllable of each mark would not, in our opinion, be likely to cause the public to associate [redacted] with the recorded trademark "Jarlsberg". Accordingly, we have directed Customs Officials in New York to release the shipment of [redacted] cheese.

Sincerely yours,

(Signed) DONALD W. LEWIS

[redacted]

Dear [redacted]

This is in reply to your letters of December 16, 1977 and January 6, 1978, concerning the country of origin marking requirements applicable to strapped bundles of sawed lumber and timbers that your client imports from Mexico.

As you know, sawed lumber and sawed timbers are exempt from the requirement for marking to indicate their country of origin, pursuant to 19 U.S.C. 1304(a)(3)(J) and section 134.33 of the Customs Regulations (19 CFR 134.33). In the case of any article described on the "J" list which is imported in a container, the outermost container in which the article ordinarily reaches the ultimate purchaser is generally required to be marked to indicate the origin of its contents.

TD 74-36(1), however, ruled that the containers of Canadian sawed lumber and timbers were also excepted from the country of origin marking requirement. The ruling stated that, by operation of Article IX of the General Agreement on Tariffs and Trade, the exemption was extended to the containers of foreign sawed lumber and timbers of any other member country of the GATT.

The Customs Service is of the opinion that this marking exception also applies to containers of sawed lumber and timbers of all foreign countries, including Mexico, that are entitled to the application of the most-favored-nation principle of 19 U.S.C. 1881, even though they may not be member countries of GATT. Accordingly, the bundles of sawed lumber and timbers imported by your

[redacted]

Dear [redacted]

This is in reference to your letter of January 8, 1978, concerning marking requirements for hand-woven wool blankets imported from Mexico.

Pursuant to 19 U.S.C. 1304, all articles of foreign origin imported into the United States must be legibly and conspicuously marked to indicate the country of origin to an ultimate purchaser in the United States, unless certain marking exceptions are applicable. For purposes of 19 U.S.C. 1304, the country of origin (Mexico) may be included on the fabric label also indicating textile fiber content and care labeling.

As marking of wool products also concerns compliance with the Wool Products Labeling Act, we are forwarding your letter to the Division of Special Statutes, Federal Trade Commission, 33 Indiana Ave., N.W., Washington, D.C. 20580 for direct reply to your regarding those labeling requirements.

In addition to our pamphlets "Marking of Country of Origin on U.S. Imports" and "Import Quotas," we enclose a Department of the Treasury News Release indicating import restraint levels of December 2, 1977 (Mexico; page 6), and the visa requirement for wool textile products imported from Mexico (page 10).

Sincerely yours,

[redacted] (Signed) [illegible]

DEPARTMENT OF THE TREASURY-U.S. CUSTOMS SERVICE — CORRESPONDENCE APPROVAL AND CLEARANCE — Form 100 (11-18-73)

JUL 1 0 1978

MAR-2-05-R:E:R
709207 DB

[redacted]

Dear [redacted]

This is in reference to your letter of June 8, 1978, regarding the country of origin marking of plastic bags which are to be used as a holder for advertising material which will be given away free to the public. You indicated that the bags will have the name of a large department store printed on it, and the department store's advertisement will be inside the bag. The name of the department store without the address or any other printed information will appear on the bag.

You would like to know if the marking on these bags meets the requirements of section 304, Tariff Act of 1930, as amended (19 U.S.C. 1304), copy enclosed.

The Customs Service has ruled that plastic bags of this type must be marked to indicate the country of origin pursuant to the requirements of 19 U.S.C. 1304. The ultimate purchaser of these bags, for purposes of 19 U.S.C. 1304(a), is considered to be the consumer who is given the bags as part of advertising material.

Accordingly, the individual bags must be legibly and conspicuously marked to indicate the country of origin. The marking does not have to appear in proximity to the name of the department store. However, if the bags carry the name and address of the U.S. company which imports or distributes the bags, the country of origin marking must appear in proximity thereto, in accordance with section 134.46 of the Customs Regulations.

Sincerely yours,

(Signed) D. D. KAST

[redacted]

Dear [redacted]

This is in reference to your letter of August 22, 1978, concerning the marking of country of foreign origin of the "USA OLYMPICS" shoe. The Olympic emblem is a registered trademark and appears on each shoe in several locations (inner tongue, middle outer sole and heel).

This is to confirm that we advised you in conference on August 15, 1978, that marking by permanently and conspicuously printing the country of foreign origin on the inner sole of each heel in a contrasting color or, alternatively on a side inner lining near the heel of each shoe in lettering at least more prominent than shoe size marking would, in our opinion, satisfy the marking requirements of 19 U.S.C. 1304.

Sincerely yours,

Request for Definition of the Terms "Discharge" or "Land" of Passengers as Used in 19 U.S.C. 1459

We have reviewed our files and cannot find any case whereby we have defined those terms in connection with passengers. However, since those terms are used in this statute in connection with merchandise and baggage, as well as passengers, we believe that those two terms do not have any unique meaning when used in connection with passengers.

The terms "land" and "discharge" in reference to cargo is referring to the unlading of cargo. For example, section 4.30 of the Customs Regulations requires that a permit or special license must be issued to the vessel before any passengers, cargo, baggage, etc., may be unladen from the vessel.

Therefore, we believe that those two terms would likewise refer to the unlading of passengers. Thus, taking into account the fact that cargo is taken off a vessel or vehicle, whereas passengers are able to take themselves off, we believe that the two definitions suggested by the Regional Commissioner of Customs at Los Angeles are satisfactory. Hence, in reference to passengers, "land" would refer in the case of vessels to the setting foot by the passenger on the dock, wharf, etc., and "discharge" would refer in the case of vehicles to the setting foot by the passenger on the ground from the vehicle.

In those instances where a vehicle carrying passengers departs a port of entry without a permit and is later apprehended, we believe that there was no discharge of such passengers. However, the vehicle itself would have proceeded farther inland without receiving the requisite permit and would violate that provision of 19 U.S.C. 1459.

711039

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B14

Also, it would appear to us that where Customs apprehends a vehicle which has left a port without the requisite permit and orders the driver and passengers out of the car, there was no discharge of the passengers without a permit in the connotation as used in this statute. Such discharge was done under Customs orders. The reason for requiring a permit before permitting passengers and cargo to be discharged is to make sure that Customs has had an opportunity to make the necessary examinations and receive the necessary declarations, entries and duties before the passengers and cargo are released from Customs supervision. In this case the ordering of the passengers out of the vehicle would in effect serve for the limited purpose needed as a permit for that purpose.

[redacted]

Dear [redacted]

This is in reference to your letter of August 9, 1979, concerning the country of origin marking of two ancillary forms included with travelers checks.

The first form, positioned at the top of the check pack, bears the words "Printed in Canada" on the reverse side next to the consumer's check cashing record. The second form, the purchase agreement form, also bears the words "Printed in Canada." The positioning of this marking is to the left of the purchaser's signature and address.

We are of the opinion that both of these forms can be considered "articles" and as such must be marked with the country of origin in accordance with section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304). We are also of the opinion that the "Printed in Canada" designation described above satisfies Customs requirements.

If you have any other questions concerning this matter please feel free to contact us again.

Sincerely,

(signed) Harvey B. Fox

The Honorable
Samuel L. Devine
Member of Congress
Federal Building
Columbus, Ohio 43215

OCT 12 1979

Dear Mr. Devine:

This is in response to your letter of September 21, 1979, enclosing copies of correspondence you received from [redacted] is concerned about the notice of proposed rulemaking which, if implemented, would remove imported nuts, bolts, and rivets from the so-called J-List of exceptions to the individual marking of country of origin requirements of the law (19 U.S.C. 1304). [redacted] points out that if the proposal were enacted, it would have a pronounced restraint on fasteners imported into this country, creating a production shortage that our domestic industry would be unable to absorb, thus adding to inflationary pressures. You asked for information concerning the reasons for the impending change and the current status of the products in question.

The "J-List," established by legislation (19 U.S.C. 1304(a)(3)(J)), excepts from country of origin marking requirements articles which the Secretary of the Treasury, pursuant to public notice published in the Treasury Decisions before July 1, 1939, determined "were imported in substantial quantities during the five-year period immediately preceding January 1, 1937, and were not required during such period to indicate their origin." Nuts, bolts and rivets appear on the list, which is set forth in section 134.33, Customs Regulations (19 CFR 134.33). The notice in the Federal Register of August 10, 1979, was published as a result of our receipt of a petition from the attorney for the [redacted] alleging that bolts, nuts and rivets were not imported into the United States in substantial quantities from 1932 to 1936 and, therefore, should not be excepted from marking requirements. [redacted] comments will be considered along with others we have received in response to the notice of proposed rulemaking, and a decision will be reached in due course as to what action, if any will be taken in response to the petition, and the substance of that decision will be published in the Federal Register and the Customs Bulletin.

The Honorable
John Glenn
United States Senate
Washington, D. C. 20510

Dear Senator Glenn:

OCT 12 1979

This in response to your letter of September 25, 1979, enclosing correspondence you received from [redacted] is concerned about the notice of proposed rulemaking which appeared in the Federal Register of August 10, 1979, which, if implemented, would remove imported nuts, bolts, and rivets from the so-called "J List" of exceptions to the country of origin marking requirements of the law (19 U.S.C. 1304). [redacted] feels that this move would be highly inflationary and would help the domestic manufacturers by decreasing the importation of fasteners.

The "J-List," established by legislation (19 U.S.C. 1304(a)(3)(J)), excepts from country of origin marking requirements articles which the Secretary of the Treasury, pursuant to public notice published in the Treasury Decisions before July 1, 1939, determined "were imported in substantial quantities during the five-year period immediately preceding January 1, 1937, and were not required during such period to indicate their origin." Nuts, bolts and rivets appear on the list, which is set forth in section 134.33, Customs Regulations (19 CFR 134.33). The notice in the Federal Register of August 10, 1979, was published as a result of our receipt of a petition from the attorney for the [redacted] alleging that bolts, nuts and rivets were not imported into the United States in substantial quantities from 1932 to 1936 and, therefore, should not be excepted from marking requirements. 712749

[redacted]

Dear [redacted]

This is reference to your letter of March 26, 1980, that refers to a ruling we issued to you on behalf of the [redacted] dated March 21, 1980, (MAR-2-05 RRUEE 712458 PO). In pertinent part, we ruled that "MADE IN TAIWAN FOR [redacted]" was an acceptable country of origin marking under section 304 of the Tariff Act of 1930, as amended, (19 U.S.C. 1304).

You now request that we approve the marking "MADE IN TAIWAN FOR [redacted] deleting [redacted]. As we stated in our March 21, 1980, ruling, the proposed marking must be legible and conspicuous with the English name of the country of origin, "Made in Taiwan" clearly indicated to the ultimate purchaser in accordance with 19 U.S.C. 1304. You stated in a telephone conversation with Fred Burns-O'Brien of this office on March 26, 1980, that all facts in the prior ruling are the same, but you merely wish to delete [redacted] from the marking, which you said was the original intent of [redacted].

The marking now proposed, with all other facts in our prior ruling unchanged, "Made in Taiwan for the [redacted]" meets the country of origin marking requirements of 19 U.S.C. 1304, as amended.

Sincerely,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

REFER TO
ENT-1-01 RRUEE
713122 DK

713122

The Honorable
David L. Boren
United States Senate
Washington, D.C. 20510

Dear Senator Boren:

This is in reply to your letter of May 28, 1980, concerning a ruling issued by the Customs Service, Legal Determination 80-0001, April 28, 1980, to the effect that imports from Taiwan must not carry any reference to the "Republic of China" or "R.O.C.". The ruling was to become effective on December 1, 1980.

As you undoubtedly know, the Department of State has been in further communication with the Customs Service about this matter, and has requested us to revise our ruling and reissue it. A copy of the revised ruling is enclosed. You will note that it provides that the marking "Republic of China" or "R.O.C." following "Taiwan" will not be a cause for refusing to admit the goods.

In general, all articles of foreign origin imported into the United States must be legibly and conspicuously marked to indicate the country of origin to an ultimate purchaser in the United States, pursuant to 19 U.S.C. 1304 and the Customs Regulations issued thereunder, copies enclosed. Ordinarily, determining the name of a country that is acceptable for country of origin marking purposes presents no problems.

Occasionally, however, as in the case of East Germany during the period 1953-1975 (copies of T.Ds. 53210, 53281(3), 55104, 67-94, and 75-172 enclosed), the status of a particular country will be somewhat unusual and it is the policy of the Customs Service to be guided by the views of the Department of State as to appropriate country of origin markings. This is the policy we have followed in connection with the marking of goods from Taiwan.

C8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Pursuant to your request, there are also enclosed the text of letters dated January 8 and 16, 1980, from the Department of State requesting us to issue our initial ruling requiring the deletion of "Republic of China" and "R.O.C." on goods imported from Taiwan.

If we can be of further assistance in this matter, please do not hesitate to let us know.

Sincerely,

Donald W. Lewis

[illegible]

AUG 28 1980

MAR-3 BRUEE
713151 F10

This ruling concerns the country of origin marking requirements for fur animal pelts, snake skins, wild animals and birds plus the eggs of wild birds.

ISSUE:

What are the marking requirements of fur animal pelts, snake skins, wild animals, wild birds and eggs of wild birds.

FACTS:

The importer wishes to ship fur products, snake skins, wild animals, wild birds, and the eggs of wild birds from Mexico to the United States. The importer wants to know the marking requirements for those items.

LAW AND ANALYSIS:

Unless excepted by law, section 304 Tariff Act of 1930, as amended (19 U.S.C. 1304), requires that every article of foreign origin (or its container) imported into the United States shall be marked in a conspicuous place as legibly, indelibly, and permanently as the nature of the article (container) will permit, in such manner as to indicate to an ultimate purchaser in the United States, the English name of the country of origin of the article at the time of importation into the Customs territory of the United States. There are some articles which are excepted from the requirements of country of origin marking in accordance with the provisions of 19 U.S.C. 1304(a)(3)(J), known as the "J-List." Skins, furs, hides, eggs, animals and birds are on the "J-List." However, in the case of any article on the "J-List" which is imported in a container, the outermost container in which the article ordinarily reaches the ultimate purchaser is required to be marked with country of origin according to Subpart C of this part (copy enclosed).

C11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

713717

713717

This ruling concerns the country of origin marking requirements of brochures imported from West Germany.

ISSUES:

Whether country of origin marking requirements may be waived for brochures imported from West Germany.

FACTS:

The importer wishes to import brochures from West Germany unmarked with the country of origin. A waiver of marking requirements under Section 304 of the Tariff Act of 1930, as amended, (19 U.S.C. 1304) has been requested. The importer claims that the brochures by their very nature would suggest their foreign origin. The brochures are printed in both English and German. The name and address of the distributor is on the back of each brochure and they have been distributed free of charge at an exhibition in Washington, D.C., of merchandise manufactered by a foreign company.

LAW AND ANALYSIS:

Title 19 U.S.C. 1304 provides generally that all articles of foreign origin must be legibly and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States. Section 134.1(d)(4) of the Customs Regulations (19 CFR 134.1(d)(4)) holds that if the imported articles are distributed as gifts, or as in this case free of charge, the recipient is the ultimate purchaser.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C13

There are waivers of marking country of origin permissible under 19 U.S.C. 1304. However, they are not applicable in this case and we cannot grant your waiver request.

HOLDING:

The brochures in question must be marked with the country of origin "West Germany."

OCT 20 1980

The Honorable
Andrew Maguire
Member of Congress
277 Forest Avenue
Paramus, New Jersey 07652

Dear Mr. Maguire:

This is in further reference to your letter of August 26, 1980, forwarded to us by the Regional Commissioner of Customs, New York, New York, transmitting a copy of a letter dated May 21, 1980, from your constituent, [redacted] letter expressed his concern over a ruling that had been issued by the Customs Service concerning the country of origin marking of goods imported from Taiwan.

The Customs Service did issue a ruling dated February 7, 1980, 712176, which was circulated to Customs officers as Legal Determination 80-0001, April 28, 1980, which stated that goods from Taiwan should be marked only "Taiwan," and that the words "Republic of China" or the letters "R.O.C." should not appear on the goods. This ruling was issued pursuant to a request from the Department of State. Subsequently, however, the Department of State requested us to modify our ruling to provide that the presence of "Republic of China" or "R.O.C." following "Taiwan" would not cause Customs to refuse to admit goods produced in Taiwan. A copy of the modified ruling dated July 25, 1980, is enclosed.

If we can be of further assistance to you please do not hesitate to let us know.

Sincerely,

(Signed) William C. Byrd

Acting Special Assistant to the Commissioner
(Congressional Affairs)

719520

Dear [redacted]

This is in response to your letter of May 19, 1982, requesting the procedures for obtaining an import license to import articles of linen and wool.

The United States Customs Service does not require an importer to obtain a license to import merchandise into the United States. However, Customs officers are required to aid in the enforcement of regulations administered by other government agencies, some of which require import licenses for particular commodities. This subject and other aspects of importing are outlined in the enclosed publications. (See page 14 of "Importing Into the United States" for the requirements on imports of wool and textiles).

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), requires that every article of foreign origin (or its container) imported into the United States shall be marked in a legible and conspicuous manner to indicate the English name of the country of origin to the ultimate purchaser in the United States.

In the past, the Customs Service has ruled that wearing apparel should be marked to indicate the country of origin by means of a cloth label sewn or otherwise permanently attached to the garment, preferably in the neck area on blouses and/or shirts.

Under the Wool Products Labeling Act of 1939 and the Textile Fiber Products Identification Act administered by the Federal Trade Commission, there are certain marking and labeling requirements to be included on imported textile and wool products; in addition to the country of origin marking requirements.

MAR 2 - 1983

DRT 1-01 CO:R:E:E
720369 M

Dear [redacted]

This is in reply to your letter of September 14, 1982, concerning the clearance of passengers in the Virgin Islands on direct flights between New York and the Virgin Islands when forced to make a fuel stop in either Bermuda or Nassau, Bahamas.

You note that such unscheduled landings in either Bermuda or Nassau are due to factors beyond your company's control. Due to the refueling stop, no one boards or exits the aircraft and no cargo is loaded or unloaded. However, under present practice, whenever this flight has been required to make an unscheduled landing, upon arrival in St. Thomas, it is classified as a foreign arrival with the attendant formal entry procedures. This results in a delay in the processing of passengers.

In order to expedite the processing of passengers, you suggest that one of the following two procedures be adopted:

1. Since the U.S. Customs Service has personnel in Bermuda and Nassau, you suggest that one of those officials would simply sign off on a form acceptable to us attesting to the fact that no one enplaned or deplaned and that no cargo was onloaded or offloaded, or

2. For U.S. Customs in the Virgin Islands, to accept a statement from the pilot certified in writing upon arrival in St. Thomas that no one enplaned or deplaned during the refueling stop and that no cargo was removed or loaded.

We oppose the adoption of either of your two proposals. Arriving aircraft in the Bahamas and in Bermuda fall under the jurisdiction of the host government. The use of U.S. Customs officers to provide security during a fuel stop is not provided for under the bi-lateral agreements and may be looked upon unfavorably by the host government. In addition, positions in preclearance are tightly controlled by U.S. Customs in cooperation with the U.S. State Department. Customs does not have the manpower available to provide for such service and continue to perform our normal functions there. In regard to your second proposal, we believe that it does not provide for sufficient control or guarantees of security. Finally, in regard to both proposals, we are unaware of any current provision in the Customs Regulations which would allow for either procedure.

720369

D4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In addition, you submitted on July 20, 1980, a proposal to amend the Customs Regulations to permit the preclearance by Customs officers in the U.S. Virgin Islands of unaccompanied parcels destined for the United States. As pointed out by you, from 1978 to 1980 local procedures were established by Customs in the Virgin Islands which permitted such preclearance. This was done without Customs Headquarter's or even the Region's approval. It was discovered that the package preclearance procedures were frequently abused. Dutiable goods and shipments exceeding size, value, and weight requirements were often presented to and cleared by Customs, despite prior agreements to preclear only nondutiable shipments of acceptable size and limited value.

Furthermore, Customs officers stationed outside the U.S Customs territory are authorized to inspect U.S. bound travelers and their accompanying baggage. Any duties and taxes collected are considered to be voluntary tenders by the importer, since duties and taxes do not accrue until goods are actually imported.

Also, cargo preclearance of express parcels would pose additional operational problems. It would impede passenger facilitation by diverting manpower to outbound cargo examinations at peak passenger processing periods, as express parcels usually arrive near the time of aircraft departure. Serious enforcement problems could also result if such cargo preclearance procedures were to be implemented at all preclearance stations. It would be much more difficult to selectively perform thorough cargo exams as the volume of cargo preclearance increases.

For the reasons mentioned in the above three paragraphs, we do not believe an amendment to the Customs Regulations which would provide for the preclearance of unaccompanied parcels by Customs officers in the U.S. Virgin Islands would be justified.

If you have any further questions on this matter, please feel free to contact us.

Sincerely,

(Signed) DONALD W. LEWIS

720802 SO

Dear Mr. Thompson:

In your memorandum of November 9, 1982, you asked for our advice regarding whether certain used firearms bearing the "WALTHER IN DESIGN" trademark, imported from Mexico and entered into a bonded warehouse in the United State States before the effective date for enforcement of the import prohibitions applicable to genuine Walther firearms by Customs, may be withdrawn from warehouse for consumption in the United States.

Our response to your request is contained in the enclosed ruling.

Sincerely,

720802 SO

This ruling concerns the applicability of the prohibitions set forth in 19 U.S.C. 1526 against the importation of foreign merchandise bearing an American trademark.

ISSUE:

Would the entry from bonded warehouse of a shipment of used firearms from Mexico, placed in warehouse on August 22, 1981, bearing the "WALTHER IN DESIGN" trademark (the name WALTHER in a banner), infringe the registered trademark "WALTHER IN DESIGN," owned by International Armament Corporation (Interarms) and recorded with the U.S. Customs Service for import protection pursuant to applicable regulations (19 CFR Part 133, Subpart A).

FACTS:

The trademark, "WALTHER IN DESIGN," was recorded with the Customs Service for import protection effective November 2, 1981. Since the trademark owner (Interarms) is a corporation organized under the laws of the State of Delaware, with no foreign parent firm, subsidiary firms or firms under common ownership or control, the Manual Supplement issued to Customs officers in the field stated that articles bearing genuine trademarks applied by the foreign manufacturer could not be imported unless said articles were consigned to or for the account of the American trademark owner, or unless importation by a third party was specifically authorized by Interarms. Subsequently, Customs Headquarters was asked by our Washington, D.C. field office to decide whether or not the pistols referred to under ISSUE above could be entered into the commerce of the United States.

Subsequently, On July 14, 1982, the registered trademark "WALTHER" (without the banner) was recorded with the Customs Service for import protection by Interarms. Our notice to Customs officers in the field specified that the trademark "WALTHER" is also entitled to the same broad protection against the importation of articles bearing genuine trademarks as is the "WALTHER IN DESIGN" trademark.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

LAW AND ANALYSIS:

Section 526 of Tariff Act of 1930, as amended (19 U.S.C. 1526), prohibits the importation into the United States of any merchandise of foreign manufacture bearing a trademark owned by a corporation created or organized within the United States, provided a copy of such trademark registration is filed with the Secretary of the Treasury and recorded in the manner provided by regulations (19 CFR 133.1 - 133.7). Infringement of federally registered marks is governed by the test of whether defendant's use of a similar (or identical) mark is likely to cause confusion, or to cause mistake, or to deceive.

The Customs Procedural Reform Act of 1978, Public Law 95-410, contains a new section 19 U.S.C. 1526(e) which provides a different disposition for seized and forfeited merchandise "bearing a counterfeit mark." The term "counterfeit" is defined as, "A spurious mark which is identical with, or substantially indistinguishable from, a registered mark" (15 U.S.C. 1127, 19 CFR 133.23a(a)). We are of the opinion that this stringent definition does not include the trademarks "WALTHER IN DESIGN" and "WALTHER" when applied to genuine goods manufactured by Manurhin under a licensing agreement with Carl Walther, Waffenfabrik, since these trademarks would not be "spurious marks" within the definition of the term "counterfeit."

In view of the fact that Interarms has recorded both the "WALTHER" and the "WALTHER IN DESIGN" trademarks with Customs for import protection after the date the used firearms in question, bearing the genuine trademark "WALTHER IN DESIGN," arrived in the United States and were entered for bonded warehouse, we are of the opinion that used firearms referred to above may be withdrawn from warehouse and entered into the United States without restriction. In the case of American Parfums Corporation v. Stramiello, 66 Civ. 1670 USDC S.D.N.Y., the court said that:

> "'Import' as used in 19 U.S.C. Sec. 1526 means simply to bring in, and refers to the time when the goods were brought into the United States."

The Court concluded in the American Parfums case, that since importation within the meaning of 19 U.S.C. 1526 was not restricted at the time the trademarked goods in question were entered for warehouse, they were subsequently admissible to entry upon withdrawal for consumption in the United States.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

720802

HOLDING:

Used firearms, bearing the genuine trademark "WALTHER IN DESIGN," which were imported into the United States and entered into a Customs bonded warehouse before the dates the trademarks "WALTHER IN DESIGN" and "WALTHER" were recorded with Customs by Interarms for import protection, may be withdrawn from warehouse and entered for consumption in the United States without restriction after the dates of recordation for these trademarks. You may furnish a copy of this decision to all concerned parties.

This ruling concerns the country of origin marking requirements for imported printed plastic bags.

ISSUE:

1. Is the marking as suggested at the bottom of the bag in "close proximity" to suggested advertisements in the upper portion of the bag.
2. Whether a marking at the bottom of the bag near the supplier's name and address is adequately legible and conspicuous.

FACTS:

[illegible] bags are manufactured in [illegible] product will be manufactured, extruded, [illegible] and [illegible] the bags will be shipped directly to the United States from [illegible] factory in China. Samples submitted to Customs indicate that [illegible] side of the bottom of each bag is printed indicating the [illegible] company's name. The importer would like to mark the bags in the [illegible] position and manner with clear identification of the country of origin in the same space.

LAW AND ANALYSIS:

Section 304, Tariff Act of 1930, as amended (19 U.S.C. 1304) provides in general that all articles of foreign origin imported into the United States shall be legibly and conspicuous marked to indicate the country of origin to an ultimate purchaser in the United States.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D10

Section 134.46, Customs Regulations (19 U.S.C. 1304) provides generally that in any case in which the name of any city, country, or other locality other than the country of origin appears on an article or its container, the name of the country of origin preceded by such words as "Made in" or "Product of" must appear in proximity thereto. The purpose of this requirement is to try to prevent ultimate purchasers from being misled or confused as to the origin of imported products. The printing of the country of origin at the bottom would be in close proximity to advertisement above, however, the actual size of the letters should be larger than is presently indicated on the samples to be legible and conspicuous.

HOLDING:

1. For purposes of 19 U.S.C. 1304, the marking at the bottom of the bag near the supplies name is adequate.

2. The lettering as shown on the sample is too small and must be larger to be legible and conspicuous.

721967

This ruling concerns the country of origin marking requirements for handbags.

ISSUE:

Whether a hang tag will be sufficient to mark handbags.

FACTS:

An importer imports nylon handbags from Korea. The handbags have on them a leather patch that has the legend [redacted] The importer asks if the handbags can be marked with the hang tags indicating that Korea is the country of origin to meet the test of close proximity. There is also a sewn-in tag denoting Korea as the country of origin.

LAW AND ANALYSIS:

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), provides generally that all articles of foreign origin (or their container) imported into the United States must be legibly and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States.

Section 134.46 of the Customs Regulations (19 CFR 134.46) states that in any case in which the words "United States," or "American," the letters "U.S.A.," any variation of such words or letters, or the name of any city or locality in the United States, or the name of any foreign country or locality other than the country or locality in which the article was manufactured or produced, appear on an imported article or its container, there

D12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

shall appear, legible and permanently, in close proximity to such words, letters or name, and in at least a comparable size, the name of the country of origin preceded by "Made in," Product of," or other words of similar meaning.

If the hang tags are secure and they state in legible and conspicuous characters that the handbag is of Korean origin so that the ultimate purchaser will know the origin upon reasonable inspection without mistaking the [redacted] for the origin, we will permit the hang tags to mark the handbags. This meets the test of close proximity to the use of [redacted]

The use of a sewn-in label follows a Circular Letter dated January 16, 1970 (MAR-2-RM) which held that handbags must be marked by a fabric label sewn to the lining of the handbag so it can be seen easily when the handbag is opened, or a permanently stamped marking in a contrating color, or by some other form of permanent marking.

HOLDING:

The requirements of 19 U.S.C. 1304 will be met if the hang tags clearly indicate "Korea" as the country of origin and hang in close proximity to the legend [redacted] and 19 CFR 134.46 is met by the sewn-in label.

723488

This ruling concerns country of origin markings on advertising brochures which will be distributed without charge by the importer to prospective customers.

ISSUE:

Whether imported advertising brochures and flyers, to be distributed without charge by the importer to prospective customers of the importer's business, may be exempted from country of origin marking requirements under the exceptions to marking set forth in 19 U.S.C. 1304(a)(3)(F) or (H).

FACTS:

An importer intends to have advertising brochures and flyers printed abroad. These advertising materials will then be imported and distributed by the importer to prospective customers in connection with the importer's business. The imported advertising materials will not be resold, but will be distributed without charge. The importer requests a ruling excepting the advertising materials from country of origin marking requirements on the ground that "(s)uch article is imported for use by the importer and not intended for sale in its imported or any other form." 19 U.S.C. 1304(a)(3)(F). In the alternative, the importer believes it is the "ultimate purchaser" of the advertising materials because the ultimate users, i.e., the prospective customers, will not purchase the materials, but receive them free of charge. 19 U.S.C. 1304(a)(3)(H).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E6

LAW AND ANALYSIS:

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), provides in general that all articles of foreign origin imported into the United States must be legibly and conspicuously marked to indicate the English name of the country of origin to the ultimate purchaser in the United States.

The imported advertising brochures are intended for use not only by the importer, but also for the use of customers or prospective customers of the importer's business. Therfore, an exemption under 19 U.S.C. 1304(a)(3)(F) cannot be granted.

The importer has stressed that the imported brochures will not be resold, but distributed without charge. The importer believes it may be the "ultimate purchaser" under the exemption provided in 19 U.S.C. 1304(a)(3)(H). The term "ultimate purchaser" is defined by the Customs regulations as "the last person in the United States who will receive the article in the form in which it was imported." 19 CFR 134.1(d). The regulations further explain that "(i)f the imported article is distributed as a gift the recipient is the 'ultimate purchaser.'" 19 CFR 134.1(d)(4).

Because the imported advertising materials will be distributed without charge, they are virtual gifts to customers who are the "ultimate purchaser" for the purposes of the marking exception.

In conclusion, no marking exception may be granted under either 19 U.S.C. 1304(a)(3) or (H).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

FEB - 1 1984

MAR 2-05 CO:R:E:E
724100 HL

[redacted]

Dear [redacted]

This is in reply to your submission of November 22, 1983, requesting Customs approval for the following country of origin marking which your company proposes to print on cartons or packages which contain related computer articles: "Packaged in (designated country) with certain components of multiple countries of origins as specified thereon." Each article will be individually marked with its particular country of origin.

According to your submission, each of several different components may be produced in one or more production facilities located in various countries, including the United States. The different components (each individually marked) will be shipped to a particular country to be packaged in a consumer carton and then imported into the United States. The consumer package will bear the company name and its United States address. Thus, the country or countries of origin must appear in close proximity to the U. S. address in accordance with 19 CFR 134.46. However, because one permanently labeled master package is desired, the countries of origin of the package contents cannot reasonably be identified precisely, i.e., it would not be feasible to maintain, in the packaging country, lot segregation of the components by their vendor countries.

Although we agree in principle with your proposal, we would require that the label on the master package indicate the "foreign" origin of the package contents as follows: "Packaged in (name of country) with certain components from foreign countries of origin as specified thereon." We believe this label would be adequate for the purposes of 19 U.S.C. 1304 in view of the fact that each article in the package would be individually marked.*

If you have any further questions, please do not hesitate to contact us.

Sincerely,

Darrell D. Kast
Chief, Entry, Licensing and
Restricted Merchandise Branch

* The word "foreign" need not be underlined on the label.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

DATE: JAN 02 1985

FILE: COP-2-83 CO:R:E:E
724382 KP

TO: District Director of Customs
Dallas/Fort Worth, Texas

FROM: Chief, Entry, Licensing and Restricted Merchandise Branch

SUBJECT: Decision of Disputed Claim of Copyright Infringement; Detention No. 83-5581-843

On September 13, 1983, your office notified [redacted] that you were detaining a microcomputer and a disk drive which that company had ordered. The detention was made under section 133.43(a), Customs Regulations (19 CFR 133.43(a)), on suspicion of copyright infringement against certain computer programs that are recorded with the Customs Service. Pursuant to 19 CFR 133.43(a), the importer filed a statement with your office denying that the merchandise contained infringing copies of any copyrighted programs. Consequently, you notified [redacted] the owner of the copyrights on the programs in question, of the action you had taken and advised the company that you intended to release the imported equipment unless, within 30 days, they filed a written demand for its exclusion from entry accompanied by a bond conditioned to hold the importer harmless in the event of wrongful detention, as required by 19 CFR 133.43(b). [redacted] filed such documents with your office. Accordingly, under 19 CFR 133.43(c)(1), you submitted the case to Customs Headquarters for a decision regarding the disputed claim of copyright infringement.

Title 17, United States Code, section 602(b) (17 U.S.C. 602(b)) authorizes Customs to prevent the importation of copies or phonorecords of copyrighted works whose making would have constituted an infringement of copyright if title 17 had been applicable. To establish copyright infringement, one must prove ownership of a valid copyright and copying by another. Atari, Inc. v. North American Philips Consumer Electronics Corp., 672 F.2d 607, 614 (7th Cir.), cert. denied, 459 U.S. 880 (1982); Novelty Textile Mills, Inc. v. Joan Fabrics Corp., 558 F.2d 1090, 1092 (2d Cir. 1977). Because direct evidence of copying often is unavailable, copying may be inferred where the alleged copier had access to the copyrighted work and the accused work is substantially similar to the copyrighted work. Atari, 672 F.2d at 614; Warner Bros., Inc. v. American Broadcasting Cos., Inc., 654 F.2d

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

284, 287 (2d Cir. 1981). On the issue of whether similarities between two works are sufficient to prove copying, detailed analysis ("dissection") of the works is relevant. Universal Athletic Sales Co. v. Salkeld, 511 F.2d 984, 987 (3d Cir.), cert. denied, 423 U.S. 863 (1975); Arnstein v. Porter, 154 F.2d 464, 468 (2d Cir. 1946). If evidence of access is absent, the similarities between the works must be so striking as to preclude the possibility that the two parties independently arrived at the same result. Arnstein, 154 F.2d at 468.

Title 17, United States Code, section 410(c) (17 U.S.C. 410(c)) provides in part:

> In any judicial proceedings the certificate of a registration made before or within five years after first publication of the work shall constitute prima facie evidence of the validity of the copyright and of the facts stated in the certificate.

To record its copyrights with the Customs Service, [redacted] furnished Customs with duplicate certificates of registration for its computer programs. The certificate of registration for the [redacted] 16-Sector Boot ROM" copyright lists [redacted] as the copyright claimant. It also shows that that program was first published on January 2, 1979, and registered on May 4, 1982. Thus, under 17 U.S.C. 410(c), that certificate of registration would constitute prima facie evidence of [redacted] ownership of the copyright in question as well as the validity of that copyright in any judicial proceedings. Accordingly, we similarly regard the certificate as prima facie evidence of the ownership and the validity of the copyright in issue, and the importer has not demonstrated sufficient facts to overcome this presumption of validity.

We have no direct evidence that the manufacturer of the detained computers copied any of [redacted] copyrighted works. Nevertheless, copying may be inferred upon a showing that the manufacturer had access to the copyrighted work and that his work is substantially similar to the copyrighted one.

The program that Customs suspects the imported merchandise of infringing is embodied in a Read-Only Memory (ROM) chip that is affixed to Disk Controller peripheral cards sold for [redacted] computers. Inasmuch as [redacted] computer peripheral cards are sold and distributed in [redacted] foreign countries, we find that the manufacturer had access to the copyrighted work. Having found access, we may therefore infer copying if the computer program contained within the detained computer's ROMs is substantially similar to [redacted] copyrighted program.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E11

724382

On the issue of whether similarities between two computer programs are sufficient to prove copying, evidence of identical bytes of information is relevant. See, Midway Mfg. Co. v. Strohon, 564 F. Supp. 741, 752-753 (N.D.Ill. 1983); Midway Mfg. Co. v. Artic Int'l, Inc., 547 F. Supp. 999, 1004 (N.D.Ill. 1982), aff'd, 704 F.2d 1009 (7th Cir.), cert. denied, 104 S. Ct. 90 (1983). A detailed analysis of the imported computer by Customs' Technical Services Division shows that it has a ROM chip containing a computer program that is 100% identical to the [redacted] 16-Sector Boot ROM" program. Thus, the imported computer's disk interface program is a duplicate of the 256-byte string that comprises the [redacted] 16-Sector Boot ROM" program. Accordingly, we conclude that the computer program contained in the imported computer is substantially similar to the copyrighted program found on [redacted] Disk Controller peripheral cards.

Our finding of substantial similarity between the program in the detained computer's ROMs and the copyrighted program in conjunction with our finding that the manufacturer of the detained computer had access to the copyrighted program compels the conclusion that the manufacturer of the imported computer copied that copyrighted program. We add, however, that in our opinion, the similarities between the works in this case are so striking as to preclude the possibility that the two parties independently arrived at the same result. Therefore, even had we not found that the manufacturer had access to the copyrighted work, we believe our conclusion that the manufacturer of the imported computer copied the Apple programs would still be legally correct under the Arnstein rule.

We have already established that [redacted] owns a valid copyright on the subject copyrighted work. Therefore, with our conclusion that the manufacturer of the imported computer copied the copyrighted program, we deduce that the making of the program in the imported computer would have constituted a copyright infringement if title 17, United States Code, had been applicable. Accordingly, under 17 U.S.C. 602(b), Customs is authorized to prevent the importation of this copy of [redacted] copyrighted work.

Under section 133.44(a), Customs Regulations (19 CFR 133.44(a)), when it is determined that an article detained on suspicion of copyright infringement is in fact an infringing copy, the district director must seize and forfeit the imported article. However, 17 U.S.C. 603(c) provides that articles imported in violation of the importation prohibitions of title 17 may be returned to the country of export whenever it is shown to the satisfaction of the Secretary of the Treasury that the importer had no reasonable grounds for believing that his acts constituted a violation of law.

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Accordingly, if you are satisfied that [redacted] had no reasonable grounds to believe that it was violating the Copyright law by importing the detained computer, then you may offer that importer the option of shipping the computer back to the country of export. On the contrary, if you find that the importer does not want to return the computer to the country of export or is not entitled to that option, then you should seize the computer pursuant to 19 CFR 133.44(a), and forfeit it as follows: The ROM chips containing the copies of the copyrighted software shall be forfeited under 17 U.S.C. 603(c), for violation of 17 U.S.C. 602(b), and destroyed. All other seized computer components shall be forfeited under 19 U.S.C. 1595a(a), and reported to the Chief, Commercial Fraud and Negligence Penalties Branch, as per Headquarters Telex No. 84871, dated May 17, 1984. Any questions concerning the reporting of seized computer components may be directed to Mr. Lou Cegala at U.S. Customs Headquarters (FTS 566-8717).

The imported disk drive does not contain any of the copyrighted programs in question. Accordingly, it does not fall within the importation prohibitions of 17 U.S.C. 602(b) and cannot be prevented from entering the country on that basis.

Section 133.44(b), Customs Regulations (19 CFR 133.44(b)), provides that upon a determination that an article detained on suspicion of copyright infringement is not an infringing copy, the district director must release the imported article and transmit the bond that was posted by the copyright owner pursuant to 19 CFR 133.43(b) to the importer. With this ruling, we have determined that the disk drive in fact is not prohibited from importation under 17 U.S.C. 602(b). Therefore, please turn the copyright owner's bond over to [redacted] along with its disk drive even though the imported computer cannot enter the country.

[redacted]

Dear [redacted]

This is in reply to your letter of July 9, 1984, requesting approval of certain garment labels for country of origin marking purposes under 19 U.S.C. 1304 and 19 CFR 134.47.

The subject labels on their front side indicate the trade name of your company which contains the state name, "Florida." The labels are also legibly marked to indicate the country of origin, i.e., "Assembled in Honduras" or "Assembled in Jamaica." We believe that these labels satisfy the requirements of 19 CFR 134.47.

In order that the subject labels satisfy the general requirements of the marking statute, 19 U.S.C. 1304, they must appear in a conspicuous place on the garment itself if such labels provide the only indication of the country of origin. We are enclosing information on the placement of country of origin marking labels on garments. If we can be of further assistance, please call Hal Loring of this office at 202-566-5765 or contact local Customs officials.

Sincerely,

(Signed) Darrell D. [redacted]

[redacted]

Dear [redacted]

This is in reply to your letter of June 21, 1984, forwarded to us by the New York Seaport (File No. 809959), concerning the country of origin marking requirements applicable to small plastic boxes which will be imported and sold by the carton to firms in the United States which will fill the boxes with items for resale.

We have examined the submitted sample. It may be described as a small clear plastic container comprised of two identical square sections which interlock to form a closed box. Each side is approximately 1.25 inches in length. The boxes will be sold by the carton to firms which will fill the boxes with an item for sale. It is our position that these boxes are disposable containers.

Accordingly, the individual plastic boxes may be excepted from country of origin marking requirements pursuant to section 134.24(c)(1), Customs Regulations, on the theory that the firms which fill these disposable containers are the ultimate purchasers of the boxes under section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304). However, the cartons which reach these firms must be legibly and permanently and conspicuously marked to indicate the country of origin of the plastic boxes contained therein. Such cartons should reach these firms unopened.

Sincerely,

(Signed) Darrell D. Kast

[redacted]

Dear [redacted]

This is in reply to your letter of July 31, 1984, concerning the country of origin of towels finished in Argentina from cloth woven in Brazil.

According to your letter, you wish to purchase unfinished woven cloth made in the designs and specifications you require from a textile mill in Brazil. The cloth will then be shipped to Argentina for cutting, finishing, and packaging. The finished product, beach towels, will then be imported into the United States. You request us to identify Argentina as the country of origin for marking purposes under section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304).

We cannot comply with your request in view of the new Customs Regulations which were published in the Federal Register on August 3, 1984 (49 FR 31248) (copy enclosed). We invite your attention to 19 CFR 12.130 in particular and note that the information necessary to the criteria for determining country of origin in subsection (b) has not been presented in your letter.

Please review the enclosed document. If you wish to present further information, we will be happy to entertain a further submission.

Sincerely,

Steven I. Pinter

[redacted]

Dear [redacted]

This is in reply to your letter of August 14, 1984, concerning the country of origin marking requirements applicable to lubricant dispensers from Taiwan. In one case, the dispenser will be imported empty and filled in the United States with lubricant of American origin. In the alternative, the American lubricant will be exported to Taiwan, placed in the Taiwanese dispensers, and will then be reimported into the United States. The instant dispensers are, upon examination, considered to be "disposable."

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), requires that, unless excepted, every article of foreign origin or its container must be legibly, permanently, and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States. In the first instance described above, it is our position that your company which fills the imported dispensers with lubricant is the ultimate purchaser of the dispensers which, by virtue of the filling, lose their identity as separate articles of commerce. Therefore, the dispensers may be excepted from individual marking pursuant to 19 U.S.C. 1304(a)(3)(D), provided (1) the shipping containers in which the dispensers are imported are properly marked to indicate the country of origin of the dispensers contained therein; (2) the shipping containers reach your company unopened; and (3) your company will fill the imported dispensers as described and such dispensers will not be otherwise sold. The Customs officers at the port of entry must be satisfied that these requirements are met before approving the exception, and may require statements or affidavits concerning these requirements for each entry for which an exception is requested.

In the alternative situation, in which American lubricant is exported to Taiwan and filled into dispensers in Taiwan, and then reimported into the United States, it is our position that the lubricant itself is not transformed by the foreign repackaging into dispensers; therefore, the lubricant is exempt from marking pursuant to section 134.32(m), Customs Regulations (19 CFR 134.32(m)). The lubricant dispenser is also excepted from country of origin marking requirements because, pursuant to 19 U.S.C. 1304(b), it is a usual container in use as such at the time of importation.

Sincerely,

[redacted]

[redacted]

Dear [redacted]

This is in reply to your letter of August 17, 1984, requesting an exemption from individual country of origin marking requirements in the case of imported universal joints which are further processed in the United States.

In their condition on importation, the subject joints are in a solid hub configuration. In this unfinished condition, the universal joints cannot be utilized for their end purposes which involve attachment to rods or shafts. Therefore, further machining must be domestically performed. In most cases, a standard boring process will be performed in order for a rod or shaft to be inserted into the joint. You indicate that the standard bored joint requires that the inside diameter of the fork hubs be precision machined to a dimension equal to one-half of the outside diameter. For the "special" bored joint, additional machining such as broaching may be required, as well as boring. The boring operation is performed on a lathe.

Section 134.35, Customs Regulations (19 CFR 134.35), provides that a manufacturer or processor in the United States who substantially transforms an imported article into a new and different article will be considered the "ultimate purchaser" of the imported article under section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), and the imported article shall be excepted from marking. On the other hand, section 134.1(d)(2), Customs Regulations, states that if the manufacturing process is merely a minor one which leaves the identity of the imported article intact, then the consumer or user of the article who obtains the article after the processing will be regarded as the ultimate purchaser. There is no question that the instant domestic machining (boring) is essential to making the imported joints into functional articles. Complex machining may effect a substantial transformation. See Midwood Industries, Inc. v. United States, 64 Cust. Ct. 499, C.D. 4026 (1970). However, in the case you present, a substantial amount of machining and processing has already occurred prior to importation compared to the boring process performed in the United States. The imported joint is far along to becoming a finished article as imported, and its identity is not fundamentally changed in the United States.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

DEPARTMENT OF THE TREASURY · U.S. CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

* U.S. GPO: 1981-617-700

Furthermore, we are not persuaded by the fact that the imported articles could not be used in their condition as imported. Such fact is relevant, but not determinative. The court in Uniroyal, Inc. v. United States, 542 F.Supp. 1026 (C.I.T. 1982), denied a marking exemption in the case of footwear uppers notwithstanding that the uppers were not marketable at retail as completed shoes. In that case, the court required a comparison of the complexity and cost of the processing which created the initial article versus the complexity and cost of the processing allegedly transforming that article into a new and different article. Although you have not submitted cost information which would permit us to make a detailed comparison, the foreign processing appears to be more substantial than the domestic processing, at least where more boring occurs in the United States. Additional machining performed domestically such as broaching may tip the balance; however, more detailed information would be required.

Accordingly, it is our position that the domestic processing (boring) operation finishes the imported articles into functional joints, but does not effect a substantial transformation of the imported articles to the extent that would justify an exception to country of origin marking requirements. Therefore, an exception under 19 U.S.C. 1304 is denied. The subject universal joints should be individually marked with their country of origin in such a manner that the marking will not be obscured by domestic processing.

Sincerely,

[redacted]

Darrell D. Fast

Dear [redacted]

This is in reply to your letter of July 2, 1984, forwarded to us by the New York Seaport Area (file No. 810014), concerning the country of origin marking requirements applicable to leaf springs imported in bulk.

The leaf spring in question is of the kind chiefly used on trucks, trailers, automobiles and tractors. The springs will be imported from the People's Republic of China in wooden containers with approximately 200 springs in each container (light springs) or approximately 30 springs of the heavy duty kind banded to a skid. You question whether each leaf spring is required to be marked to indicate the country of origin in view of the fact that similar merchandise may be imported with mere container marking.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), requires in general that, unless excepted, every article of foreign origin or its container must be legibly, permanently, and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States. Container marking will suffice only if it it virtually certain that the container will reach the ultimate purchaser in the United States unopened. If this requirement is met, only then may be contents be considered for an exception from individual country of origin marking requirements.

If automobile parts, i.e., leaf springs, were being imported for the use of an original equipment manufacturer for use in the manufacture of automobiles, then such manufacturer would probably be considered the ultimate purchaser of those parts. Such parts would not have to be individually marked if they reached the manufacturer in a properly marked container unopened and were guaranteed to be used in the production of his automobiles. Another result obtains, however, if the parts were being imported for sale to distributors whose chains of distribution varied. Container marking would not suffice in such case because the guarantees of the first situation could not be made by the importer. Such parts (leaf springs, for instance) would have to be individually marked. Please also note that if a distributor repackages marked articles imported in bulk, then the marking requirements of 19 CFR 134.35 may apply.

Sincerely,

Darrell D. Kast

[redacted]

Dear [redacted]

This is in reply to your letter of August 31, 1984, requesting an exemption from individual country of origin marking requirements in the case of vinyl zippered blanket bags.

The bags in question are containers chiefly used for the packing, transporting, or marketing of blankets, comforters, bedspreads, and the like. The vinyl bags are not sold individually at retail, but rather to manufacturers or distributers of these home furnishings who pack and market the furnishings in the bags.

It is our position that, for the purposes of 19 U.S.C. 1304, the "ultimate purchaser" of the vinyl bags is not the purchaser of the blanket or comforter, but rather the blanket manufacturer or distributor who packs and markets his product in this bag. The vinyl bag loses its identity as a separate article of commerce when used in this manner.

Accordingly, the vinyl bags may be excepted from individual marking requirements under 19 U.S.C. 1304(a)(3)(D), provided the bags reach the party who packs or markets the home furnishing in these bags, in a container that is legibly, permanently, and conspicuously marked to indicate the country of origin of the vinyl bags therein; and that such container reach that party (the ultimate purchaser) unopened; and further that these bags will be used by the ultimate purchaser to pack or market the home furnishing (blanket or comforter) and not otherwise sold. Customs officers at the port of entry must be satisfied that these requirements are met and may require affidavits or statements to this effect.

Sincerely,

Darrell D. Kast
Chief, Entry, Licensing and
Restricted Merchandise Branch

Dear [redacted]

This is in reply to your letter of August 30, 1984, concerning the country of origin of fabric woven in Japan, but subjected to hand screen printing and finishing in Brazil.

The subject fabric is described as 100 percent cotton broadcloth which is woven in Japan from yarn of Japanese origin. The fabric is then subjected to a process in Japan characterized as "lime sour and scouring." The fabric is then shipped to Brazil where it is subjected to hand screen printing and finishing. Importation into the United States follows.

In accordance with interim section 12.130, Customs Regulations, it is our position that the country of origin of the subject fabric is Japan. No substantial transformation is deemed to have occurred in Brazil; see, in particular, interim section 12.130(b)(1)(iv), Customs Regulations.

Sincerely,

Steven I. Pinter

[redacted]

Dear [redacted]

This is in reply to your letter of October 2, 1984, forwarded to us by [redacted] concerning the country of origin marking requirements applicable to Christmas ornaments designed by your company in Germany, but made in Taiwan.

According to your letter, the ornaments will be sold in individual poly bags closed by a header which indicates that the ornament is an original design by your company in West Germany, but that the ornament is "Made in Taiwan." Both header samples bear the country of origin marking in close proximity, and in a size comparable, to the reference to West Germany. Therefore, both headers are adequate for purposes of section 134.46, Customs Regulations.

Inasmuch as the ornaments will be sold to ultimate purchasers in the United States in individual poly bags sealed with a header, and the law requires that either an article or its container be marked to indicate the country of origin, we find the proposed marking to be adequate for country of origin marking purposes under 19 U.S.C. 1304.

Sincerely,

Steven I. Pinter

OCT 30 1984

Dear [redacted]

This is in reply to your letter of October 22, 1984, concerning the country of origin marking requirements applicable to cologne bottles imported empty, but to be filled in the United States by firms which will fill the empty bottles with their own product. The bottles are disposable and will not be sold apart from the product they are intended to contain when filled.

The empty cologne bottles are exempt from individual country of origin marking requirements under 19 CFR 134.24(c)(1) on the theory that when disposable containers are imported by persons or firms who fill or package them with various products which they sell, these persons or firms are the ultimate purchasers of the containers (which may then be excepted from individual marking under 19 U.S.C. 1304(a)(3)(D)). When imported, only the outside wrappings or packages containing the empty cologne bottles need be marked to indicate the country of origin of the bottles.

You also indicate that the cologne bottles will be pre-printed with the name and address of the firm(s) that will fill these bottles with their product. The address may be a United States address or make reference to a foreign locale. We do not consider these to be misleading markings, i.e., the consumer of the filled product is not misled as to the origin of the empty cologne bottle with such marking. Customs has taken the view that the marking on the bottles will not be mistakenly viewed as relating to the origin of the bottles, since such containers will lose their identity as separate articles of commerce after they are filled. ORR Ruling 679-70.

Sincerely,

Steven I. Pinter

The Honorable
Richard T. Schulze
House of Representatives
Washington, D.C. 20515

Dear Mr. Schulze:

Thank you for your letter of November 14, 1984, forwarding the comments of [redacted] concerning the new country of origin marking requirements applicable to textile and wool garments and the identification of such merchandise as foreign-made in mail order catalogs (Title III of Public Law 98-417).

[redacted] applauds Title III of Public Law 98-417, amending the Wool Products Labeling Act of 1939 and the Textile Fiber Products Identification Act, insofar as the new law affects country of origin labeling of imported garments. He objects, however, to the country of origin information to be required by the new law in mail order promotional descriptions for textile and wool products sold in the United States.

[redacted] objects to that area of the new law entirely within the jurisdiction of the Federal Trade Commission (FTC) which has just published a notice of proposed rulemaking to conform FTC regulations to the new law. For your convenience, we are enclosing a copy of the FTC notice inviting comments which appeared in the Federal Register on November 13, 1984 (49 FR 44913). We trust that the enclosed materials will be helpful to you and your constituent.

If we can be of further assistance, please do not hesitate to contact us.

/S/ J Simpson
For

Sincerely,

[redacted]

Robert P Schuster
Assistant Commissioner

TO: District Director of Customs
Portland, Oregon 97209

IMPORTED ARTICLE: Unfinished steel forgings or "blanks" for chipper knives, measuring 1/2" by 4" by 22". The blank is bevelled on one edge.

FURTHER MANUFACTURING OR PROCESSING PERFORMED IN U.S:

Top and bottom surfaces of the blank are ground ('trued'). The forged bevel edge is ground to impart a cutting edge, then honed to remove the burr created by this grinding. In some cases bolt slots are ground into the blades.

APPLICABLE LAW AND CUSTOMS INTERPRETATION: Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), generally requires that every article of foreign origin or its container be marked legibly, permanently, and conspicuously to indicate the name of the country of origin to an ultimate purchaser in the United States. If an imported article will be used in manufacture in the United States, the U.S. manufacturer may be the "ultimate purchaser" if he subjects the imported article to a process which results in a substantial transformation of the article. In such case, the imported article is exempt from marking. A substantial transformation occurs when the further manufacturing transforms the imported article into an article having a name, character, or use different from the imported article. If, however, the manufacturing process is merely a minor one which leaves the identity of the imported article intact, there is no substantial transformation and the imported article is not exempt from country of origin marking. See U.S. v. Gibson-Thomsen Co., Inc., 27 C.C.P.A. 267, C.A.D. 98 (1940); Sections 134.1(d) and 134.35, Customs Regulations. Although each case must be decided on its own facts, the following examples are illustrative of Customs interpretation: No substantial transformation found where further processing in the United States included: combination without further manufacture of imported ax handles with ax heads of U.S. origin; encoding of admission information on the magnetic strip of imported printed admission tickets; attachment of porcelain socket and base to zinc lampholder casting; attachment of handle to screwdriver blade-ratchet assembly; purification and heating of imported raw honey and blending with domestic honey to produce processed honey; and, silk-screening applied to imported shirts. In each case, Customs determined that the further processing did not result in an article with a new name character, or use. Substantial transformation was found where further processing included: grinding and polishing of unfinished forgings to produce scissors; tooling and threading operations performed on imported nut blanks to produce free spinning, vibration resistant locknut; canning process involving processing for preservation and consumption; and, cutting, sewing, and finishing of piece goods to make finished goods. In each case, Customs determined that the further processing resulted in an article with a new name, character, or use.

DETERMINATION:

____ No Substantial Transformation: The process(es) described above do not result in a substantial transformation of the imported article. Therefore, the imported article must be legibly, permanently and conspicuously marked to indicate its foreign country of origin.

X Substantial Transformation: The process(es) described above results in a substantial transformation of the imported article. Therefore, the imported article is exempt from individual marking provided the container in which it is imported is legibly and conspicuously marked with the country of origin, and Customs officers at the port of entry are satisfied that the article will reach the ultimate purchaser (processor) in the original marked containers unopened, and that the article will be manufactured as described above and not otherwise sold.

727843

COUNTRY OF ORIGIN-MARKING RULING
(USE OF ABBREVIATIONS)

TO: Mr. Jan C. Vandenberg
Traffic Manager
Interlek, Inc.
2367 Bering Drive
San Jose, CA 95131

MERCHANDISE: 8-lead cerdip integrated circuits

COUNTRY OF ORIGIN: Philippines

REQUESTED ABBREVIATION: PHIL

ADDITIONAL PERTINENT FACTS: International Standard Country Code for Philippines is PH.

APPLICABLE LAW AND CUSTOMS INTERPRETATION: Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), requires that every article of foreign origin or its container be marked legibly, permanently, and conspicuously to indicate the English name of the country origin to an ultimate purchaser in the United States. Abbreviations which "unmistakably" indicate the name of a country are acceptable (19 CFR 134.45(b)). The instances in which the Customs Service has permitted the use of abbreviations instead of the entire name of the country or origin have been limited. For example, Customs has ruled that the following abbreviations are not acceptable: CAN or CANA for Canada, PHIL for Philippines, ZBW for Zimbabwe, RSA for Republic of South Africa; no acceptable abbreviations were found for Netherlands or Holland. Abbreviations found acceptable include Gt. Britain for Great Britain, U.K. for United Kingdom and S. Africa for South Africa.

DETERMINATION:

There is no acceptable abbreviation for Philippines. No waiver of marking requirement of full name can be granted for this product.

Mr. David Mickelson
D. F. Mickelson & Company
401 Wilshire Boulevard
Santa Monica, California 90401

Dear Mr. Mickelson:

This is in response to your letter of February 1, 1985, concerning the country of origin marking requirements for labels which are imported in bulk for use in the United States. According to your letter, you wish to mark the cartons which contain the paper wrappers and the paper wrappers which contain the labels themselves, "Made in Hong Kong" or "Printed in Hong Kong" in lieu of marking the individual labels. After importation, the labels will be placed on containers of products such as juices.

We believe that the ultimate purchaser of your labels is the manufacturer who affixes the labels to the container. Thus, he is the one who must be apprised of the country of origin of the label. Title 19 U.S.C. 1304(a)(3)(D) permits the marking of a container in lieu of marking the individual articles themselves if this is a reasonable means of assuring that the ultimate purchaser is aware of the country of origin.

Marking the cartons and the paper wrappers is a reasonable means of indicating the country of origin under the above provision provided that the paper wrappers which contain the labels reach the manufacturer unopened.

Sincerely,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

SUBJECT: Request for Internal Advice 46 U.S.C. 289, Section 4.80a C.R.

An issue has been raised as to whether or not purchases from gift shops on board passenger vessels traveling between ports in Puerto Rico and other ports in the United States qualify for personal exemptions as "articles acquired abroad".

According to C.I.E. 209/62, T.D. 53585(2), travel between United States ports without touching a foreign port does not constitute foreign travel or returning from abroad. Thus, purchased articles as described above are not "articles acquired abroad" and do not qualify as such for personal exemptions.

R.F. Cooke, Marketing Manager
Williams and Company, Inc.
901 Pennsylvania Avenue
Pittsburgh, Pa. 152233

Dear R. F. Cooke:

This is in response to your letter dated May 7, 1985, concerning country of origin marking on repackaged imported fasteners.

As distributors of stainless steel and nonferrous fasteners, you state that you presently repackage imported fasteners in properly marked boxes in accordance with 19 CFR 134.25. You would like to know whether at the request of an end-user you may discontinue this marking provided you inform him in writing that in some instances you will supply repackaged fasteners containing a mixture of domestic article and article from one or more foreign countries in descending order as follows: Canada, Japan, Taiwan, Korea, and China.

We believe that the above notification does not satisfy the requirements of 19 CFR 134.25. Basically, this provision requires that an importer certify to Customs that if he repacks he shall not obscure or conceal the country of origin marking appearing on on the article, or else mark the new container with the country of origin; if the importer transfers the merchandise to a repacker, he must notify the repacker of the requirements (that is to properly mark the repacked goods). The repacker cannot merely notify his transferee of the country of origin.

Sincerely,

Steven I. Pinter

728216 LR

[redacted]

Dear [redacted]

This is in response to your correspondence dated April 30 and June 6, 1985, concerning country of origin marking and fiber content labeling of certain foreign-made garments. You pose five questions indicated below. Please note that unless indicated otherwise, our responses pertain only to the marking requirements pursuant to 19 U.S.C. 1304 enforced by the Customs Service. There may be additional requirements under the Textile Fiber Products Identification Act administered by the Federal Trade Commission (FTC).

1) Is it still permissible to state made in United Kingdom as well as made in England?

For purposes of the country of origin marking statute enforced by Customs, United Kingdom is an acceptable alternative for England.

2) Is it permissible that the country of origin only be shown on the fiber content label sewn to the front facing of the ladies coat?

For purposes of country of origin marking statute enforced by Customs, the only requirements are that the marking is conspicuous, legible and permanent. Assuming the proposed marking satisfies these criteria, it is satisfactory.

3) Must each and every garment carry a country of origin label sewn to the center back neck?

The country of origin marking statute does not specify where the country of origin marking must be placed. So long as it is in a conspicuous location, it will be acceptable.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

G3

728216

4) Is it so that either the manufacturer's name or the importer's name be included on a label?

There is no such Customs requirement although the Textile Fiber Products Identification Act enforced by the FTC does require this this information. The FTC should be contacted for the exact requirements in this regard.

5) What is "R.N." number and is it necessary that we have one?

"R.N." is a registered identification number issued by the FTC which may be used to satisfy the identification requirements of the Textile Fiber Products Identification Act. The FTC should be contacted for specific information in this regard.

Sincerely,

Steven I. Pinter

[redacted]

Dea[redacted]

This is in response to your inquiry concerning the applicability of the country of origin marking requirements to brochures utilized for self-promotion. You state that the subject brochures are to be given away and are not for resale.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) generally provides that all articles of foreign origin (or their containers) imported into the United States are required to be legibly, conspicuously, and permanently marked to indicate the country of origin to an ultimate purchaser in the United States (emphasis added). The ultimate purchaser is generally the last person in the United States who will receive the article in the form in which it was imported. Section 134.1(d), Customs Regulations (19 CFR 134.1(d)). If the imported article is distributed as a gift the recipient is the ultimate purchaser. Section 134.1(d)(4), Customs Regulations (19 CFR 134.1(d)(4).

In this case, the recipient of your brochure would be the ultimate purchaser. As the above regulation makes clear, the fact that the brochure is given away as a gift is not determinative. Accordingly, the brochures must be individually marked with the country of origin. The words, "Printed in Hong Kong" would be an acceptable marking.

Sincerely,

S. Drandle

GS

AUG 7 1985

MAR-1 CO:R:E:E
728342 LR

Mr. Bob Maynard
Hallman Racing
315 W. Bradley Avenue
El Cajon, California 92020

Dear Mr. Maynard:

This is in response to your letter of June 5, 1985, concerning country of origin marking on certain sports apparel. The company's logo, "H USA" or "Hallman USA", appears on each of the garments.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) generally requires that every article of foreign origin (or their containers) imported into the United States are required to be legibly, conspicuously, and permanently marked to indicate the country of origin to an ultimate purchaser in the United states. If the word United States or some variation of it (e.g. U.S.A.) appears on the article further requirements are applicable. If it is part of a trademark or tradename, the country of origin of the article must be preceded by "Made in", "Product of" or other similar words. Section 134.47, Customs Regulations. If it is not part of a trade mark of trade name, the country of origin marking must also be placed in close proximity to and in letters in at least a comparable size to word United States or U.S.A. Section 134.46, Customs Regulations.

728342

In this case, it appears from the submitted brochure that U.S.A. is part of the company's trademark. Accordingly, so long as the country of origin marking is legible, conspicuous, permanent, and preceded by the words "Made in" or other similar words, it is acceptable. However, if there are additional references to U.S.A. on the garment the requirements of section 134.46 must also be satisfied.

You ask whether the following markings would be conspicuous: 1) a tag sewn in the cuff on gloves; 2) a tag sewn in the back by the size tag in racing pants; and 3) the marking molded into the rubber outer sole and stamped on the outside of leather at the top of a boot. Without samples of the merchandise in question we cannot provide a definitive ruling. However, it it is likely that the above markings would be found to be conspicuous.

G6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

We note that the letters U.S.A. appear on two of the submitted labels and that such letters are not a part of the Ballman trademark. In one case, it is in connection with the size of the garment; in another case it is part of an address. In order to satisfy the requirements of section 134.36, Customs Regulations, the country of origin marking must appear in close proximity to and in letters of at least a comparable size to the U.S.A. reference. The red label does not comply with the latter requirement.

Sincerely,

S. Brandle

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

JUL 9 1985

ENT-1 CO:R:B:E
728393 JL

Leonard L. Rosenberg, Esq.
Sandler & Travis, P.A.
444 Brickell Avenue
Miami, Florida 33131

Dear Mr. Rosenberg:

In your letter of May 2, 1985, you asked for a binding ruling on behalf of your client, Meldisco, Division of Melville Corporation, that countervailing duties paid voluntarily as the result of the findings of a review by the Department of Commerce are refundable with interest in the event of a later decision reducing or eliminating duties and that said deposit would stop the accrual of interest which could legally be assessed pursuant to 19 U.S.C. 1677(g).

You state that in Treasury Decision 80-13 Customs published a suspension of liquidation of all entries of certain Brazilian footwear and your client was required to make a deposit of countervailing duties in the amount of 1 percent as a result. You state that on April 19, 1985, the Department of Commerce published the results of its administrative reveiw conducted pursuant to 19 U.S.C. 1675 and found countervailable bounties or grants in the amount of 8.84 percent ad valorem for entries made during calendar year 1980 and ordered Customs to begin liquidations of those entries which had been suspended pursuant to Treasury Decision 80-13. You continue that the Customs Service has been enjoined from liquidating those entries by the United States Court of International Trade (Case No. 85-04-00579). Your client is offering to make the voluntary payments in order to stay the accrual of additional interest at the time of liquidation.

19 U.S.C. 1677g(a), was amended on October 10, 1984, by Public Law 98-573, and provides as follows:

> (a) General Rule.-Interest shall be payable on overpayments and underpayments on accounts deposited on merchandise entered, or withdrawn from warehouse, for consumption on and after-
>
> > (1) the date of publication of a countervailing or antidumping duty order under this subtitle or section 1303 of this title, or

G8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

(2) the date of a finding under the Antidumping Act, 1921.

This provision therefore provides for the payment of interest on the difference between the cash deposits of estimated countervailing or antidumping duties and the duties finally assessed on the entries. Where there is no difference between the two figures, then no interest would be collected.

You asked that if it is finally determined that if any part of the countervailing duties deposited voluntarily as well as any amount representing interest alleged to be due on the amount of the countervailing duties voluntarily deposited are not owed, that such duties would be returned to the importer with all applicable interest charges, in the same manner as countervailing duties deposited at the time of entry.

Customs is of the opinion that all monies voluntarily tendered and accepted on an entry before its liquidation are characterized as "estimated duties" and may be refunded pursuant to a liquidation or reliquidation, and may be the subject of a protest under 19 U.S.C. 1514.

Sincerely,

Steven I. Pinter

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

OCT 15 1985

MAR-1 CO:R:E:E
729001 LR

Richard Hirschman
Vice President
Hudson Optical Corporation
842 Broadway
New York, N.Y. 10003

Dear Mr. Hirschman:

This is in response to your recent letter regarding the country of origin marking requirements that apply to spectacle frames and eyeglasses. Specifically, you wish to know the requirements that apply when parts of the frames come from different countries.

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) generally provides that all articles of foreign origin (or their containers) imported into the United States are required to be legibly, conspicuously, and permanently marked to indicate the country of origin to an ultimate purchaser in the United States (emphasis added). The ultimate purchaser is generally the last person in the United States who will receive the article in the form in which it was imported. 19 CFR 134.1(d). If an imported article will be used in manufacture, the manufacturer may be the "ultimate purchaser" if he subjects the imported article to a process which results in a substantial transformation of the article; however, if the manufacturing process is merely a minor one which leaves the identity of the imported article intact, the consumer or user of the article after the processing, will be regarded as the "ultimate purchaser." 19 CFR 134.1(d)(1)&(2).

The questions you have raised are addressed in Customs Ruling No. 709266 (copy enclosed). In that ruling Customs found that the assembly of imported frames does not constitute a substantial transformation of the item sufficient to make the importer the ultimate purchaser and that in such case, country of origin marking would be required on the imported fronts and temples. Accordingly, in the first situation you present both the imported fronts and temples must be individually marked with their country of origin. If, however, the temples and fronts are produced in the same country and are imported together for assembly into a complete frame, we will permit the marking "Frame made in _____ or "Frame _____" on only one of the components. Where there is additional processing performed (i.e. more that mere assembly of the fronts and temples) Customs might find a substantial transformation, depending on the particular circumstances involved.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

G10

729001

In the case where an importer/manufacturer assembles the imported fronts or temples with domestically produced fronts or temples, the above ruling states that the importer/manufacturer would be considered the ultimate purchaser. Therefore, in the second and third situations you present the imported articles would be excepted from marking pursuant to 19 U.S.C. 1304(a)(3)(D) provided Customs officers at the port of entry are satisfied that the importer will assemble the imported fronts or temples with domestically produced fronts or temples and will not sell them in their imported condition. In the event that this exception is applicable, the shipping containers would still have to marked with the country of origin.

Please be advised that Ruling No. 709266 is in effect unless revoked after appropriate prior notice.

Sincerely,

/S/

Steven I. Pinter
Chief, Entry, Licensing and
Restricted Merchandise Branch

729174

Harold I. Loring, Esq.
Grunfeld, Desiderio, Lebowitz
& Silverman
Two World Trade Center
New York, New York 10048-0654

Dear Mr. Loring:

This is in response to your letter of November 19, 1985, concerning the country of origin marking of imported bicycles.

You state that your client marks both the individual carton and the bicycle itself in order to provide the ultimate purchaser with the country of origin. Some of the bicycles are sold unassembled in the cartons while others are assembled and sold, but in either case the country of origin is visible. The cartons are marked in large letters "MADE IN TAIWAN, R.O.C." on the flat side of the carton. The bicycles are marked with the same country designation on the head-tube just below the handlebars.

We find that the country of origin markings on the carton and on the bicycle itself meet the test of section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) that every article of foreign origin or its container must be legibly, permanently and conspicuously marked to indicate the English name of the country of origin to an ultimate purchaser in the United States.

Sincerely,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Mr. Robert Follick
Follick & Bessich
299 Broadway, Suite 1309
New York, NY 10007

Dear Mr. Follick:

Your letter of May 9, 1986 on behalf of your client, Class Kid, Ltd., requested this office to rule upon the tariff classification of infant boys' apparel from Thailand. Your sample will be returned as requested.

The submitted sample, style no. 75-550, consists of a full front opening four button short sleeve shirt and matching shorts with partially elasticized rear waistband. The shorts have shoulder straps that are secured in place by fabric loops at the shirt shoulders. The shirt and shorts are made of identical 65% polyester, 35% cotton woven fabric. Both items are sized for male infants 4-7.

Style no. 75-550 is classifiable under the provision for other women's, girls', or infants' wearing apparel, not ornamented: of man-made fibers: not knit: other: other: playsuits ... and similar apparel, in item 384.9415, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 4 cents per pound plus 18.8 percent ad valorem.

Style no. 75-550 falls within textile category designation 637. As a product of Thailand, this merchandise is subject to a visa requirement based upon international textile trade agreements.

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Mr. D. S. Brown
Products Manager
Montedison USA Inc.
1114 Avenue of the Americas
New York, N.Y. 10036

Dear Mr. Brown:

In your letter dated May 12, 1986, you inquired about the dutiable status of Fomblin and Galden from Italy.

According to your letter you are of the belief that Fomblin and Galden products should not be classified in item 428.47, Tariff Schedules of the United States because they are perfluorinated polyethers produced from tetrafluroethylenes or hexafluoropropenes without alcohol functions. You also indicate that the products in question are not polyhydric alcohols nor are they substituted derivatives of alcohols.

It is our opinion that the deriviation from tetrafluoroethylene or hexafluoropropene is immaterial. We do agree however that there are no alcohol functions in all the Fomblin products you sent us except Fomblin Z-DOL. All the Fomblin products have ether (of polyhydric alcohol) functions however, including Fomblin Z-DOL.

Since it is our opinion that Fomblin Z-DOL, Y06/6, Y-04, Y-25 and Galden D-02 have ether of polyhydric alcohol functions and since compounds with those functional groups are classifiable in item 428.47, TSUS, we believe they are properly classified.

Therefore we affirm that Fomblin Z-DOL, Y06/6, Y-04, Y-25 and Galden D-02 are classifiable under the provision for ethers of polyhydric alcohols in item 428.47, Tariff Schedules of the United States, and dutiable at the rate of 12.3 pecent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the

Mr. G. Van Zyl
Haggie Rand Limited
P.O. Box 40072
Cleveland, South Africa

Dear Mr. Zyl:

In your letter dated April 24, 1986, you inquired about the dutiable status of steel wire rope from South Africa.

Typical lengths of these ropes are between 200 and 700 feet and diameters may vary from 1 1/4 inches to 4 inches. They will be imported with becket loops welded on the ends for use in installing the ropes in excavating machines.

These steel wire ropes with becket loops attached are classifiable under the provision for wire ropes, fitted with fittings in item 642.2000, Tariff Schedules of the United States, and dutiable at the rate of 6.2 percent ad valorem.

You also inquired about importing this merchandise outside the Bilateral Trade Arrangements (Voluntary Restraint Agreement). There is currently no South African export visa requirement for merchandise classified in item 642.2000, TSUS, but visa requirements change from time to time so it is suggested that you check with the United States Department of Commerce in Washington D.C. or with your own government in order to keep informed of changes in the visa requirements as they occur.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Beaumaris 3193, Victoria, Australia

Dear Mr. Saunders:

In your letter dated April 30, 1986 , you inquired about the dutiable status of plastic packaging from Australia. A sample and a brochure were submitted.

The submitted sample is an article of polyvinyl chloride with a reinforced carry handle formed to snugly hold two bottles and a glass for sale at retail to consumers. The packaging can be customized to hold bottles, glasses, cork pullers, and other promotional items. The products are packed in the plastic packaging before they are sold to retail stores. The consumer does not buy the packaging as a separate article, but purchases the merchandise which comes packaged in these containers.

The plastic packaging is classifiable under the provision for containers of plastic chiefly used for the packaging, transporting, or marketing of merchandise in item 772.20, Tariff Schedules of the United States, and dutiable at the rate of 3.6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Sincerely,

John J. Martuge
Area Director
New York Seaport

Mr. J. M. Abrahams
President
Phil Patterson, Corp.
Room 16
Airport Terminal Building
Des Moines, Iowa 50321

Dear Mr. Abrahams:

In your letter of May 12, 1986, you requested the tariff classification for 3 styles of gloves from Korea. Samples of each style were submitted with your request.

The shooter's mittens consist of a woven outer shell of 65 percent polyester and 35 percent cotton. The lining is made of dacron polyester and has a Gore-Tex insert. The applied, ribbed knit cuff is made of polyester. The palm has a flap opening that can be secured by a velcro closure. Sewn within this mitten is an insulated glove. The flap opening permits the user to keep his or her hand warm by being continuously in both the glove fingers and the mitten. By opening the flap, the user can extend his or her fingers through the flap while keeping them warm. This combination glove/mitten shows special design for use in the sport of hunting.

The glove you describe as an extended gauntlet ski glove has a woven outer shell of 65 percent polyester and 35 percent cotton including the fourchettes and extended gauntlet. Leather reinforcement covers the palm and thumb. The hand portion of this glove is lined with Dacron polyester and has a Gore-Tex insert. The wrist has a single row of elastic gathering across both the front and back. A hook and clasp is attached through a leather loop in the side seam. The uninsulated gauntlet is sewn onto the glove starting approximately 1 inch below the elastic gathering. The gauntlet extends for approximately 10 1/2 inches and has elastic in the hem. This length covers the entire forearm to the elbow. An inseam construction is used throughout. An embroidered applique ornaments the back of the hand.

Although you describe this glove as a ski glove, the unlined, extended, gathered gauntlet is neither of a type normally found on ski gloves nor of a type that is particularly suited and adapted for use by skiers. This glove cannot, therefore, be classified as ski equipment.

The last sample is described as a simulated leather dress glove. The shell is described as "Sofrina" polyester, which, for tariff pur-

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

poses, is a plastic material, and the interlining is sponge, bonded to the tricot lining. A single row of elastic gathers is sewn into the center of the wrist on the front and back and extends for approximately 3/4's of the width. This glove is hemmed at the cuff. A half-pique construction is used on the palm side of the fingers and for the inset thumb. The balance of the glove has an inseam construction.

The first sample, the shooter's mitten, is classifiable under the provision for ...other gloves, not provided for in the foregoing provisions of this subpart, specially designed for use in sports, in item 735.0700, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 5.2 percent ad valorem.

The second sample, the extended gauntlet glove, is classifiable under the provision for gloves ... ornamented: of man-made fibers: in item 704.3210, TSUSA, and is dutiable at the rate of 21.7 percent ad valorem.

The extended gauntlet glove falls within textile category designation 631. As a product of Korea, this merchandise is subject to quota restaints and visa requirements based upon international textile trade agreements.

Due to the changeable nature of these agreements, you are advised to contact your local Customs officer prior to importation of this merchandise to determine the current status of any import restraints or requirements.

The third sample, the simulated leather dress glove, is classifiable under the provision for gloves of rubber or plastics: with fourchettes, in item 705.8560, TSUSA, and is dutiable at the rate of 14.1 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Karl E. Lomberk
V.P. Sales Director
Windsor Toys Inc.
140 Grand Street
Carlstadt, NJ 07072

Dear Mr. Lomberk:

This is in reply to your letter of May 8, 1986, regarding the tariff status of a "Heart-to-Heart Bear," a product of Korea, presumably the Republic of Korea (South Korea).

The subject merchandise is a stuffed bear figure, approximately 14 inches in height, consisting of a shell or "skin" of plush textile material filled with polyester fibers, safety-lock black plastic eyes and nose and a toy textile nightshirt and hat.

The merchandise also contains a battery-powered (9 volt, included) audio unit which is activated by pressing the chest area of the toy figure. The sound device incorporates an integrated circuit with chip which electronically reproduces a simulated heart beat. Access to this component is by means of a velcro fastened compartment within the bear's plush exterior shell.

Headnote 2, Schedule 7, Part 5, Subpart E, Tariff Schedules of the United States (TSUS), provides that the term "toy" encompasses "any article chiefly used for the amusement of children or adults". Further, Headnote 1 of this Subpart requires that articles described therein, with certain exceptions not applicable in the instant situation, be so classified irrespective of whether provided for more specifically elsewhere in the tariff schedules.

Although the heart beat audio unit is a feature not normally associated with a toy animal figure, we do not see where its purpose is so functional or non-toy like that it would detract from the figures overall attraction as a plaything or source of amusement for children. In fact, the beating heart just serves as an amplification or enhancement of the concept of the toy bear, much like animation or a programmed voice supplement the attraction of other toy animal figures.

Accordingly, the subject "Heart-To-Heart Bear" figure with its incorporated sound device is considered on entirety classifiable under the provision for toy figures of animate objects(except dolls),

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A11

not having a spring mechanism, stuffed and valued over 10 cents per inch of height, in item 737.30, TSUS, and dutiable at the rate of 5.9 percent ad valorem.

The battery imported with the article is separately classified under the provision for primary cells and primary batteries in item 682.95, TSUS, dutiable at the rate of 5.7 percent ad valorem.

Articles classifiable under item 682.95, TSUS, which are the products of Korea are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1 (a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

Peter J. Baish

Washington, D.C. 20007-2173

Dear Mr. Caradec:

In your letter of May 12, 1986, on behalf of Cacolac S.A. of Bordeau, France, you inquired about the dutiable status of a chocolate dairy beverage from France.

This chocolate dairy beverage consists by weight of sterilized skim milk (92.1 percent), sugar (6.6 percent), cocoa (1.2 percent), and carrageenan (0.1 percent) as a stabilizer. This beverage is ready to drink and will be packaged either in a snap-top retail tin holding 8.45 fluid ounces or in a retail bottle holding 6.76 fluid ounces.

This chocolate dairy beverage is classifiable under the provision for Chocolate milk drink in item 118.1500, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 2[illegible] percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Mike Babcock
1366 W. 700 South
Salt Lake City, Utah 84104

Dear Mr. Babcock:

In your letter dated May 14, 1986, you inquired about the dutiable status of a PVC picnic bag, the Sportsoft Cooler, from Korea.

Sample submitted is composed of PVC and measures approximately 12.5 inches by 21 inches. There is a nylon coil zipper closure running along the top front and side panels. Affixed to all sides are woven nylon adjustable straps for easy carrying. Imprinted on the top of the bag is the name "Sportsoft Cooler." Furthermore, it is described as being "constructed from a waterproof, super-resilient material," which is well-insulated and collapsible for convenient storage purposes.

You claim that your product is designed for food only and should not be considered a carrying bag for personal effects. It is to be noted that your advertisement shows both food and beverages within the bag.

One can ascertain Congressional intent through the Tariff Classification Study which reads: "The luggage and handbags covered here may be fitted with bottle, dining, drinking, manicure, sewing, traveling or similar sets of a type used for convenience while traveling..." Thus, in the case of Prepac Inc. v. United States, 78 Cust. Ct. 108, C.D. 4694 (1977), the court stated "it is clear that the intent in enacting this provision was to encompass such travel goods as are primarily used for travel which are utilized for food and beverages." Therefore, this office feels that the PVC picnic bag is primarily for the convenience of the traveler to carry food and beverages when traveling.

The Sportsoft Cooler is classifiable under the provision for luggage, of other materials, other, in item 706.6245, Tariff Schedules of the United States, and dutiable at the rate of 20 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry

Mr. Andrew Knox
DSM, Sales Office Rubber
Post Office Box 43 6130 AA
Sittard, Netherlands

Dear Mr. Knox:

Although our letter of January 2, 1986 requested additional information and dumbell specimens regarding Kelrinal CM rubber, the data you sent with your letter of May 12, 1986 relates to a Kelrinal VP 17 from the Netherlands. Therefore, we cannot issue a tariff classification ruling covering the Kelrinal CM rubber until the information regarding this product is submitted.

However, the technical information and dumbell specimens covering Kelrinal VP 17 were forwarded to our laboratory. The analysis indicates that this product falls within the tariff definition of rubber, and is classifiable under the provision for synthetic rubber in item 446.1557, Tariff Schedules of the United States Annotated. The rate of duty is 0.4 percent ad valorem.

With respect to Kelrinal VP 17, this is a ruling letter issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Raleigh C. Perry
Raleigh Perry and Associates, Inc.
3963 Magnolia Lane
Buford, GA 30518

Dear Mr. Perry:

In your letter dated May 27, 1986, you inquired about the dutiable status of electronic instrument cases, styles Ramm, Unicom, and Clydesdale from Canada.

You have submitted several pictures depicting various hard shell carrying and transporting cases for different types of merchandise including video cameras, video recorders, audio-visual products and other similar electronic equipment.

In general, the cases appear to be differentiated in terms of overall size and slight constructional and compositional features.

The light duty, style Ramm, to medium-light duty, style Unicom, carrying cases consist basically of the following specifications:

1) P.V.C. edge moulding fastened with split rivets;
2) plated steel surface mount handles;
3) plated steel corners and corner clamps;
4) A.B.S. Plastic laminated to 1/4" plywood;
5) serialized nameplates;
6) standard 1" polyester foam lining.

The medium to heavy duty carrying cases, style Clydesdale, consist basically of the following specifications:

1) positive locking aluminum "tongue and groove" valence;
2) custom extruded aluminum "double edge" corner moulding;
3) plated steel handles and catches;
4) zinc plated steel corners and corner clamps;
5) A.B.S. Plastic or natural finish, embossed aluminum to 1/4" plywood;
6) serialized nameplates;
7) standard 1" polyester foam lining.

You have stated that your merchandise should not be considered luggage since it is not sold for any personal end use but rather to commercial, industrial, educational and similar markets for the purposes of protection, storage and transportation of the above mentioned equipment.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

87

Schedule 7, Part 1, Subpart D, Headnote 2, TSUS, provides that "For the purposes of the tariff schedules (a) the term 'luggage' covers — (ii) brief cases, portfolios, school bags, photographic equipment bags, golf bags, camera cases, binocular cases, gun cases, occupational luggage cases (physicians', sample, etcetera), and like containers and cases designed to be carried with the person."

This office feels the instant merchandise is ejusdem generis with the items enumerated in subsection (ii). In essence, ejusdem generis means that when general words in a statute follow a specific enumeration of persons or things, the general words are not to be construed in their widest sense or meaning, but rather are to be limited, or held to apply, only to persons or things of the same kind or class as those specifically enumerated.

The term "luggage" was discussed in Adolco Trading Co. and Adolco Trading Corp. v. United States, 71 Cust. Ct. 149, C.D. 4487 (1973). With respect to the items listed in Headnote 2(a) (ii), the court observed as follows:

> The exemplars in subsection (ii) are containers or cases designed to hold specific items which give them their names: brief cases to hold papers, school bags to hold school articles, golf bags to hold golf equipment, gun cases to hold guns, camera cases to hold cameras, etcetera.

Upon reviewing the data submitted, it appears that the electronic instrument cases are of the same kind or class as those specifically enumerated articles preceding the words "like containers and cases." The electronic instrument cases are designed to hold items which gives the cases their names. Therefore, the electronic instrument cases are "like containers and cases" within the meaning of the headnote.

In addition, you have suggested the classification of item number 726.0500, TSUS, since these cases can be designed so as to protect musical instruments. The items shown do not appear to be dedicated for use with any specific instrument, but rather do appear to be carrying cases designed to protect the contents during travel.

The electronic instrument cases, style Ramm, Unicom, and Clydesdale are classifiable under the provision for luggage, of other material, other, in item 706.6245, Tariff Schedules of the United States, and dutiable at the rate of 20 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported.

Ms. Olga Padilla
R.L. Jones Tecate, Inc.
P.O. Box 970
Tecate, CA 92080

Dear Ms. Padilla:

In your letter of May 31, 1986, you requested the tariff classification of various products from Mexico on behalf of your client Design Models, Inc.

Your inquiry concerns the classification of topographic scale contour maps, architectural models of office buildings, apartment and condominium complexes and acrylic fabrication of articles. Pursuant to a telephone conversation with you on June 19, 1986 with NIS Stephanie Joseph, it was confirmed that you did not supply sufficient product information on the architectural models nor on the acrylic fabrication of articles, to give you a proper classification. It was confirmed that you will supply the needed information for proper tariff classification at a future date on another ruling request letter.

The topographic contour map is cut from rigid urethane foam which is machined into a three dimensional contoured surface. You contend that the article is properly classified under the provision for models of inventions and of other improvements in the arts, to be used exclusively as models, in item 737.05, TSUS. This provision is only applicable to models which are exclusively used as prototypes for the purpose of constructing the actual articles. Moreover, the prototype must feature a final design representing an invention or other improvement in the art of whatever the prototype represents. Topographic maps are not applicable under this model provision.

Topographic urethane foam geographical contour "map" is classifiable under the provision for expanded, foamed, or sponge rubber or plastics, and articles not specially provided for wholly or almost wholly of such rubber or plastics: not flexible in item 770.30, Tariff Schedules of the United States, and dutiable at the rate of 5.7 percent ad valorem.

Articles classifiable under item 770.30, TSUS, which are the products of Mexico are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

Mr. Paul Curry
Anthony Williams, Inc.
6466 City West Parkway
Eden Prairie, Minnesota 55344

Dear Mr. Curry:

Your letter of May 23, 1986 concerns the dutiable status of soap in the form of fishes, ducks, butterflies and other animals from Switzerland. Samples and a brochure were submitted for our review.

The soap in the form of animals is classifiable under the provision for toilet soap, valued over 20 cents per pound, in item 466.1500, Tariff Schedules of the United States Annotated. The rate of duty is 0.5 cent per pound plus 3.8 percent ad valorem. This rate of duty has been temporarily reduced to 0.4 cent per pound plus 2.9 percent ad valorem under item 947.26 (part 2, Appendix to the Tariff Schedules and general headnote 3(d)(ii)).

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

Peter J. Baish
Area Director

Mr. Ray Cahill
Concepts International, Inc.
425 N. Michigan Avenue
Suite 920
Chicago, IL. 60611

Dear Mr. Cahill:

Your letter of June 3, 1986 concerns the dutiable status of a compact containing cosmetics, a color pencil and applicators from Taiwan. A sample of the compact was submitted for our review.

The plastic compact, 4-1/4 inches by 3-1/2 inches and 1/2 inch deep, contains various shades of eye shadow, blush-on and lipstick, as well as a color pencil and two applicators for the eye shadow and lipstick. The compact comes with a "velvet" pouch.

The compact with its pouch and the cosmetics, including the color pencil, are classifiable under the provision for cosmetic and other toilet preparations, not containing alcohol, in item 461.4030, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 5.2 percent ad valorem.

One applicator, a brush, believed to be of natural hair and over 10¢ each, is classifiable under the provision for artists' brushes and hair pencils, in item 750.6000, TSUSA, with a rate of duty of 3.2 percent ad valorem. The second applicator is a combination toilet article which has a brush on one end and a plastic applicator on the other end. This item is classifiable under the provision for combination toilet articles which contain combs, brushes, or combs and brushes, as integral parts, in item 750.7500, TSUSA, with a rate of duty of 6.7 percent ad valorem.

Articles classifiable under items 461.4030, 750.6000, & 750.7500, TSUSA, which are the products of Taiwan are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

Cosmetics are subject to the regulations and requirements of the Food and Drug Administration (FDA), and any questions you may have should be addressed to the Food and Drug Administration, 5600 Fishers Lane, Rockville, Maryland 20857, telephone: (301) 443-3370.

Mr. S. Richard Shostak
Stein, Shostak, Shostak, and O'Hara
3580 Wilshire Blvd. Suite 1240
Los Angeles, California 90010-2597

Dear Mr. Shostak:

In your letter of June 7, 1986, you inquired on behalf of your client, Formulabs, Inc. about the tariff classification of "Wire-Coding Ink" from Mexico.

The prospective import is used to print or mark on insulated wire and cable. This printing includes legends, numbers, longitudinal stripes, hashmarks, and simulated bandmarks. The printing process is caused by direct contact of the insulated wire or cable with an engraved printing wheel. This printing wheel, identified as an "Intaglio Engraved Marking Wheel" results in a gravure printing process utilizing special printing machines that support the wheel, extrudes the substrate (insulated wire) and holds the ink.

"Wire-Coding Inks" having a pigment (dye), binder, solvent, etcetera, utilizing printing wheels are classifiable under the provision for ink and ink powders, other, in item 474.2620, Tariff Schedules of the United States, and are dutiable at the rate of 1.8 percent ad valorem.

Articles classifiable under item 474.2620, TSUS, which are the products of Mexico are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Ms. Pat Johnson
P & J Associates, Inc.
1055 West Baseline #2020
Mesa, AZ 85202

Dear Ms. Johnson:

In your letter dated June 4, 1986, you inquired about the dutiable status of a PVC inflatable ice chest from Taiwan.

The sample that was previously submitted is stated to be an inflatable ice chest of 18 gauge PVC and measured approximately 12 inches by 12 inches by 18 inches. There was a textile coil zipper closure running along the top and removeable woven double handle straps. It was advertised as a lightweight, durable bag utilized for holding your favorite beverage and rugged enough to take anywhere.

You claim that the item's sole purpose is to keep the beverages cold and is in no way to be used as a picnic bag. Since you feel the luggage provision is not applicable, you suggest the merchandise in question be classified under the provision for pneumatic mattresses and other inflatable articles not specially provided for, in item 790.3900, TSUS.

Although you claim its sole purpose is for keeping the beverages cold, it is also stated to be sturdy enough for travel purposes. In addition, to be classified under 790.3900, TSUS, it cannot be specially provided for elsewhere in the tariff.

As previously noted, it was Congressional intent, through the Tariff Classification Study, that the luggage and handbags covered in the tariff "may be fitted with bottle, dining, drinking, manicure, sewing, traveling or similar sets of a type used for convenience while traveling..." In the case of Prepac Inc. v. United States, 78 Cust. CT.108,C.D. 4694 (1977), the court stated "it was clear that the intent in enacting this provision was to encompass such travel goods as are primarily used for travel which are utilized for food and beverages".

This office feels the instant merchandise is more comparable to the above ruled upon picnic bags. Its stated purpose is in fact subordinate to its primary function of conveniently carrying food and beverages when traveling.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C4

Since it is more specially provided for than other inflatable articles under 790.3900, TSUS, the PVC ice chest is classifiable under the provision for luggage, of other material, other, in item 706.6245, Tariff Schedules of the United States, and dutiable at the rate of 20 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

Peter J. Raish

CIBA-GEIGY Corp
Ardsley, NY 10503

Dear Ms. Washenko:

In your letter dated June 5, 1986, you inquired about the dutiable status of Hardener HY 2959 from Switzerland.

Hardener HY 2959, a hardener for epoxy resins, is a mixture of Euredur 370, bisphenol-A and N-aminoethylpiperazine. Euredur 370 is a reaction product between a fatty ester and a polyalkylamine.

Hardener HY 2959 is classifiable under the provision for mixtures in whole or in part of any of the products provided for in Schedule, 4 part 1, Subpart B in item 407.1910, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 1.7 cents per pound plus 13.6 percent ad valorem but not less than the highest rate applicable to any component material. Based on the bisphenol-A, which is dutiable under item 403.4900, TSUSA, the rate of duty would be 1.7 cents per pound plus 13.7 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

American Nafta Corporation
721 Walnut Avenue
P.O. Box 1363
Barrington Il. 60001

Dear Mr. Plooyer:

In your letter dated June 5,1986, you inquired about the dutiable status of a butylene/butane mix from West Germany.

Accordng to your letter you believe that since all the components of the mixture are individually free of duty, that the mixture will also be free. Unfortunately we cannot agree.

Such a mixture is classifiable under the provision for mixtures of two or more organic compounds in whole or in part of hydrocarbons derived in whole or part from petroleum, shale oil or natural gas in item 430.10, Tariff Schedules of the United States, and dutiable at the rate of 5 percent ad valorem, but not less than the highest rate applicable to any component compound. No compound has an higher rate.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. S. A. Mitha, Traffic Manager
Montedison USA Inc.
1114 Avenue of the Americas
New York, NY 10036

Dear Mr. Mitha:

In your letter dated May 29, 1986, you inquired about the dutiable status of various chemical mixtures from Italy.

According to information received from your office these products will be used in conjunction with plastics and rubbers.

Peroximon VR71 when produced from benzenoid sources is classifiable under the provision for compounds which can be benzenoid derived, in item 407.06, Tariff Schedules of the United States, and dutiable at the rate of 13.5 percent ad valorem.

Peroximon VR71 when produced from non benzenoid sources is classifiable under the provision for other organic compounds in item 429.95, Tariff Schedules of the United States, and dutiable at the rate of 3.9 percent ad valorem.

Peroximon BP50 is classifiable under the provision for mixtures, not specially provided for in item 407.19, Tariff Schedules of the United States, and dutiable at the rate of 1.7 cents per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be benzoyl peroxide classifiable under item 403.65. Tariff Schedules of the United States, and dutiable at the rate of 20.7 percent ad valorem.

Peroxin DH is classifiable under the provision for benzenoid mixtures in item 407.19, Tariff Schedules of the United States, and dutiable at the rate of 1.7 cents per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be diisopropyl benzene hydroperoxide classifiable under item 403.65, Tariff Schedules of the United States, and dutiable at the rate of 20.7 percent ad valorem.

Retilox F and Peroximon CH are classifiable under the provision for other benzenoid peroxides of alcohols in item 403.65, Tariff Schedules of the United States, and dutiable at the rate 20.7 percent ad valorem.

C8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Peroximon K1, and K2 are classifiable under the provision for benzenoid mixtures in item 413.54, Tariff Schedules of the United States, and dutiable at the rate of 11.9 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be dimethyl phthalate classifiable under item 409.34, Tariff Schedules of the United States, and dutiable at the rate of 0.3 cents per pound plus 17.7 percent ad valorem.

Peroximon S163, peroximon S164 and Peroximon S165 are classifiable under the provision for benzenoid mixtures in item 413.54, Tariff Schedules of the United States, and dutiable at the rate of 11.9 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be a benzenoid plasticizer (ester of pthalic acid type) classifiable under item 409.34, Tariff Schedules of the United States, and dutiable at the rate of 0.3 cents per pound plus 17.7 percent ad valorem.

In order to classify peroximon K3 and K4, we require the complete chemical name or structure, using Chemical Abstract Service terminology, for the non-benzenoid alkyl ketones present in both products.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. David Lavi
1034 17th Street, #103
Santa Monica, Ca. 90403

Dear Mr. Lavi:

Your letter of June 8, 1986 concerns the dutiable status of 33 brands of European perfumes, colognes and toilet water from Panama.

All of the 33 different perfumes, colognes and toilet waters you have listed in your letter bear trade-names or trademarks which have been registered with the U.S. Patent Office, many of which have also been recorded with the United States Customs Service. Accordingly, there may be some restrictions on the importation of some of these products. Since you have written to the Entry, Licensing and Restricted Merchandise Section, Customs Headquarters, Washington, D.C., that office will advise you regarding the matter of registered and recorded trademarks and trade-names as it relates to importations of cosmetic products from Panama and elsewhere.

Regarding your request for a tariff classification ruling covering perfumes, colognes and toilet waters, these type products are classifiable under the provision for perfumes, colognes, and toilet waters: not containing alcohol, in item 461.3000, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 5.3 percent ad valorem. When containing alcohol, these products are classifiable in item 461.3500, TSUSA, dutiable at the rate of 1 cent per pound, plus 5.3 percent ad valorem. In addition, perfumes containing alcohol are subject to a Federal Excise Tax (26 U.S.C. 5001) of $12.50 per wine gallon, and a proportionate tax at the like rate on all fractional parts of such wine gallon.

Since the perfumes, colognes and toilet water which you contemplate importing are not the products of Panama, they are not entitled to duty free treatment under the Generalized System of Preferences (GSP).

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Miss Reina Gil De Karam
Reira Import - Export of Canada Ltd.
5940 Boul. Des Grandes Prairies
St. Leonard, Quebec, Canada H2P 1A4

Dear Miss Gil De Karam:

In your letter dated June 11, 1986, you inquired about the dutiable status of two soft margarines from Canada.

Samples of these two soft margarines, labels LACTANTIA and LACTANTIA "Garlic flavor," were forwarded with your inquiry. LACTANTIA is comprised, by weight, of soya oil (about 80.2 percent) and moisture (about 16.4 percent), with the remaining ingredients consisting of non-fat milk solids, salt, monoglycerides, soya lecithin, potassium sorbate, lactic cultures, color, B.H.A.-B.H.T., Vitamin A Palmitate, and Vitamin D. LACTANTIA with Garlic flavor contains, as flavoring ingredients, white wine, garlic oil, dry garlic, parsley, and red pepper. The two samples were packaged in retail plastic tubs of 250 grams and 454 grams.

LACTANTIA and LACTANTIA with Garlic flavor are classifiable under the provision for oleomargarine and butter substitutes in item 116.3040, Tariff Schedules of the United States, and dutiable at the rate of 7 cents per pound.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Roger Bonazzi
Comobar Inc.
2301 Collins Avenue, Suite 300
Miami Beach, FL 33139

Dear Mr. Bonazzi:

In your letters dated June 13, 1986 and June 23, 1986, you inquired about the dutiable status of a sugarless cappuccino mix from France and Italy.

Ingredient breakdowns accompanied both letters. Two samples, submitted with your June 13 letter, were examined and disposed of. The mixture consists of instant skimmed milk powder (80 percent by weight), instant soluble coffee (16 percent), and "chocolate in powder" (4 percent). The cost figures you have submitted indicate the instant soluble coffee is the component material in chief value. The product may be imported in 25 kilogram bags, for repackaging in the United States, or in 10 gram, ready to use packages.

The cappuccino mixture in 25 kilogram bags is classifiable under the provision for edible preparations not specially provided for...other, in item 183.0040, Tariff Schedules of the United States Annotated (TSUSA), dutiable at the rate of 10 percent ad valorem, and subject to quota restrictions in item 950.19, TSUS.

The cappuccino mixture in 10 gram, ready to use packets, is classifiable under the provision for edible preparations not specially provided for...other ...other, in item 183.0520, TSUSA, and dutiable at the rate of 10 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

Peter J. Baish

Mr. Joel K. Simon
Serko, Simon & Abbey
Counsellors at Law
One World Trade Center, Suite 3371
New York, NY 10048

Dear Mr. Simon:

In your letter dated June 19, 1986, on behalf of your client, Russ Berrie and Company, you inquired about the dutiable status of a stuffed teddy bear in a metal can from China.

The sample submitted with your inquiry is a soft plush textile representation of a bear labelled item number 245 and measuring approximately 4 inches in height. The figure has a plastic nose and eyes attached to the face and a textile ribbon tied around the neck. The bear is fully stuffed with textile clippings. The figure will be imported inside a cylindrical metal canister labelled item number 4908 that will be manufactured in Hong Kong. The can is composed of tin coated iron sheets and measures approximately 3 3/4 inches high, including its lid, and 3 1/2 inches in diameter. The metal can is not considered a usual type of container ordinarily sold at retail with its contents; the bear and metal container are classified separately.

You state the can should be classified under tariff item 657.15, the provision for articles of tin plate not specially provided for. The canister has a utilitarian function; it is generally used to store various objects in one's household. The can is not classified under tariff item 657.15 because it is more specifically provided for elsewhere in the tariff schedules.

The teddy bear, item number 245, is a fully distended, amusing depiction of an animal. Accordingly, it is classifiable under the provision for toy figures of animate objects (except dolls), not having a spring mechanism, stuffed and valued not over 10 cents per inch of height, in item 737.2800, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 13.3 percent ad valorem. If the figure is valued over 10 cents per inch of height, the bear is classifiable under the provision for toy figures of animate objects (except dolls), not having a spring mechanism, stuffed and valued over 10 cents per inch of height, in item 737.3000, TSUSA, and dutiable at the rate of 5.9 percent ad valorem.

The metal can, item number 4908, is classifiable under the provision for articles not specially provided for of a type used for

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D1

household, table or kitchen use, of tin plate, in item 653.9000, TSUSA, and dutiable at the rate of 3.2 percent ad valorem.

Articles classifiable under item 653.9000, TSUSA, which are the products of Hong Kong are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Michael J. Goldman
G.S. International, Inc.
70 Walnut Street
Wellesley, Maine 02181

Dear Mr. Goldman:

In your letter of June 20, 1986, you asked for information about the tariff status of "micro-nutrients" (metal chelating agents) from France.

You suggested that these micronutrients (chelates) be classified as fertilizer under item number 480.6560, Tariff Schedules of the United States, TSUS, since they will be used as micronutrient fertili[illegible]. Classification under item 480.65 requires that the importe[illegible]ticle be used chiefly for fertilizers, or chiefly as an ingredi[illegible] in the manufacture of fertilizers.

A tariff classification controlled by use (other than actual use) is to be determined in accordance with the use in the United States at, or immediately prior to, the date of importation, of articles of that class or kind to which the imported articles belong, and the controlling use is the chief use, i.e., the use which exceeds all other uses (if any) combined.

Chelating agents are used in the fields of analytical chemistry, plant and animal nutrition, medicinal chemistry, the separation of metals, purification of natural products, detergents, metal cleaning, scale removal, etcetera.

Your inquiry does not provide enough information for us to issue a tariff classification ruling. Requests for rulings must be submitted in accordance with Part 177, Customs Regulations. Your request for a classification ruling should include evidence of chief use.

If the subject chelating agents (FeEDTA), (ZnEDTA), (MnEDTA), (MgEDTA), and (CuEDTA) are Chiefly used as micronutrients in agriculture, they would probably be classified under the provision for nitrogenous fertilizers and fertilizer materials in item 480.6560, TSUS, and would be free of duty.

If chief use cannot be established, the above metal chelates would probably be classified under the provision for other nitrogenous compounds in item 425.5290, TSUS, with duty at the rate of 7.9 percent ad valorem.

Mr. Roman E. Longoria, Jr.
International Consulting
1418 Beach, Suite 122
The Village by La Posada,
P.O. Box 578
McAllen, Texas 78502

Dear Mr. Longoria:

In your letter of June 18, 1986, you requested the tariff classification of two peanut confectionery products from Mexico.

The first product is "Palanqueta de Cacahuate" or peanut brittle bar. It is an individually wrapped 30 gram (1.06 ounce) bar measuring approximately four inches long by one and a half inches wide by three eighths of an inch thick. This product is essentially composed of roasted peanuts encased in a butterscotch flavored hard sugar candy.

The second product is sugared peanuts. These are individual roasted peanuts which have been given a thin coating of vanilla flavored caramelized sugar. The finished product will be imported in a vacuum packed transparent shrink plastic container which holds 125 grams (4.4 ounces) of this confection.

Both of these products are classifiable under the provision for candy and other confectionery, not specially provided for, in item 157.1005, Tariff Schedules of the United States, and dutiable at the rate of 7 percent ad valorem.

Articles classifiable under item 157.1005, TSUS, which are the products of Mexico are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations. Such articles are not subject to any quota restrictions.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the

Mr. Michael R. Toole
Arthur J. Fritz & Co.
40 Exchange Place
New York, NY 10005

Dear Mr. Toole:

In your letter dated June 25, 1986, on behalf of Atlantic Display Corporation, you inquired about the dutiable status of a rattan picnic basket from the People's Republic of China.

The sample submitted, composed of rattan, measures approximately 15 inches by 15 inches by 8 inches. It has a 31 inch double handle which is wrapped with rattan over a metal base covered with plastic. Its top and bottom interior are lined with textile covered with a clear see through plastic sheeting. Along its interior top portion, there are four open compartments and above them are priated "Bella Bella - Bell' agio."

One can ascertain Congressional intent through the Tariff Classification Study which reads: "The luggage and handbags covered here may be fitted with bottle, dining, drinking, manicure, sewing, traveling or similar sets of a type used for convenience while traveling ..." Thus, in the case of Prepac Inc. v. United States, 78 Cust. Ct. 108, C.D. 4694 (1977), the court stated "it is clear that the intent in enacting this provision was to encompass such travel goods as are primarily used for travel which are utilized for food and beverages." Therefore, this office feels that the PVC picnic bag is primarily for the convenience of the traveler to carry food and beverages when traveling.

The rattan picnic basket is classifiable under the provision for luggage, of unspun fibrous vegetable materials, of rattan or of palm leaf, other, in item 706.2100, Tariff Schedules of the United States, and dutiable at the rate of 18.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported.

Houston, Texas 77032

Dear Mr. Lord:

In your letter dated June 25, 1986, written on behalf of your client, Isotech, you inquired about the dutiable status of Tedimon 31 from Italy.

Tedimon 31 is polymethylene polyphenyl isocyanate. Your technical data indicates the product is used in the production of rigid polyurethane foams.

Tedimon 31 is classifiable under the provision for other benzenoid compounds with other nitrogen functions in item 405.8000, Tariff Schedules of the United States Annotated, and dutiable at the rate of 1.3 cents per pound plus 16.2 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. William H. Chambless
Allco Chemical Corp.
P.O. Box 6200 B
Pittsburg, Kansas 66762

Dear Mr. Chambless:

In your letter of June 19, 1986, you inquired about the dutiable status of BTDA and PMDA from Japan.

BTDA is 3,3', 4,4' - benzophenonetetracarboxylic dianhydride. PMDA is benzene - 1,2,4,5 tetracarboxylic dianhydride. You state that these products are specialty chemicals that are used to make high temperature plastic and plastic composites.

BTDA is classified under the provision for other single or complex oxygen-function carboxylic acids and their anhydrides in item 404.4600, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 1.7 cents per pound plus 17.9 percent ad valorem.

PMDA is classified under the provision for other polycarboxlic acids and their anhydrides in item 404.3700, TSUSA. The rate of duty is 20.4 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Mr. J.F. Bell
Le Thermogene
176 Rue del' Arbrisseau 5900 Lille

Dear Mr. Bell:

In your letter dated June 23, 1986, you inquired about the dutiable status of two pharmaceutical products from France. The samples as submitted are not marked in compliance with the marking regulations of the United States.

The sample marked "Le Thermogene" balm consists of a collapsible metal squeeze tube containing a formulated ointment. The ointment consists of capsicum extract, glycol salicylate (a benzenoid drug) and excipients. This product is used as a counterirritant and antirheumatic for muscular pain, upper respiratory conditions, arthritis, etc.

"Le Thermogene" balm is classifiable under the provision for benzenoid drugs, other in item 412.7000, Tariff Schedules of the United States, and dutiable at the rate of 6.9 percent ad valorem.

The sample marked "Le Thermogene" quate (cotton/wool) is a woven cotton bandage that is impregnated with the medicinal capsicum extract.

"Le Thermogene" quate is classifiable under the provision for bandages impregnated with a medicinal in item 495.0500, Tariff Schedules of the United States, and dutiable at the rate of 2.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Harold Alden
President
Brentwood Originals
P.O. Box 6272
Carson, CA. 90749

Dear Mr. Alden:

In your letter dated June 27, 1986, you inquired about the dutiable status of an unstuffed acrylic pile animal face from either China or Taiwan.

The submitted sample is a round unstuffed animal face composed of an acrylic fabric of pile construction. It measures approximately 16-inches in diameter with the facial features of a cat distinguishable by different colored yarns and a felt tongue. It has a botton slit and a sewn-on pouch on its back, approximately 9-inches by 9-inches, for storage purposes. It will be imported in its unstuffed condition and then filled in the United States with man-made fibers and the bottom slit sewn shut.

You believe the unstuffed animal face is classifiable under the provision for toy figures of animate objects, not having a spring mechanism, not stuffed, other, in item 737.4000, Tariff Schedules of the United States Annotated (TSUSA), dutiable at 8.3 percent ad valorem. This item is precluded from such provision since it is not chiefly used for the amusement of children or adults.

Accordingly, the unstuffed acrylic pile animal face is classifiable under the provision for articles not specially provided for, of textile materials, of man-made fibers, pile or tufted construction, in item 389.5000, TSUSA, and dutiable at the rate of 2 cents per pound plus 13.3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mine and Process Service, Inc.
P.O. Box 484
Kewanee, IL 61443

Dear Mr. Ptasnik:

In your letter dated June 26, 1986, you inquired about the dutiable status of a gamma coal thickness indication system from England.

The system consists of a gamma probe, a coal thickness indicator unit, a remote indicator unit, a power supply, a survey unit, and a probe simulator. The system determines the distance to the roof or the floor of a coal seam by measuring the strength of the natural gamma radiation from the rock and shale above or below the seam. The indicator unit provides analog and digital outputs which can be used to indicate the thickness of the seam or to control a digging machine. However, none of the digging machine controls are included in the system.

The system is classifiable under the provision for instruments and apparatus for measuring or detecting gamma radiation, in item 712.1510, Tariff Schedules of the United States, and dutiable at the rate of 5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

819626

Mr. R. N. Plooyer
American Nafta Corp.
721 Walnut Avenue
P.O. Box 1363
Barrington, IL 60010

Dear Mr. Plooyer:

In your letter dated July 7, 1986, you inquired about the dutiable status of a butylene/butane mixture from West Germany.

In our letter to you under number 819116 we indicated that in our opinion the product you requested a ruling on was classifiable as a mixture.

Your current letter indicates that it is your opinion that the product should not be classified as a mixture because of a statement in the headnote to schedule 4 of the Tariff Schedules of the United States. In part it reads that "the presence of impurities which occur naturally does not affect the classification of a compound." That citation was taken from Headnote 2(a)(iii) of the headnote to Schedule 4.

However in headnote 3 (a) the term "mixture" is explained as "substances consisting of two or more ingredients ... whether occuring in nature or whether artificially produced." We agree that minimum amounts of impurities do not affect the classification of a compound. In this instance however the quantity of impurities cannot be disregarded.

We therefore affirm our letter of July 2, 1986 that a butylene/butane mixture is classifiable under the provision for mixtures, not specifically provided for in item 430.10, Tariff Schedules of the United States, and dutiable at the rate of 5 percent ad valorem, but not less than the highest rate applicable to any component material. No component has a higher rate.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported.

Mr. George W. Cutting
CUMET Corporation
2624 Medford Place
Fullerton, CA 92635

Dear Mr. Cutting:

In your letter dated July 15, 1986, you inquired regarding the tariff classification of various chemicals and metal dusts produced in Italy. These products include zinc dust Zincoptima, zinc dust Zincoptima type G, zinc oxide gold seal, zinc oxide white seal, zinc oxide commercial seal, zinc carbonate, zinc sulfate monohydrate, copper sulfate, antimony trioxide Stibital and antimony trioxide commercial grade. You submitted data sheets on these products with your ruling request.

The data sheets describe zinc dust Zincoptima and zinc dust Zincoptima type G as zinc dust. Therefore, these products are classifiable under the provision for zinc powders and flakes: dust, in item 626.4000, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 0.3 cent per pound.

The data sheets describe the zinc oxide gold seal, zinc oxide white seal, zinc oxide green seal and zinc oxide commercial seal as products which contain respectively 99.9 percent, 99.7 percent, 99.7 percent and 96 percent of zinc oxide. These products contain only trace amounts of other substances. The granulometry information submitted indicates that these products are suitable for use as pigments. Furthermore, the information submitted indicates that these products are dry zinc oxides. Therefore, the zinc oxides are classifiable under the provision for pigments: containing zinc: zinc oxide: dry, in item 473.7600, TSUSA, and dutiable at the rate of 0.2 percent ad valorem.

The zinc carbonate is classifiable under the provision for zinc compounds: other, in item 422.7800, TSUSA, and dutiable at the rate of 3.9 percent ad valorem.

The zinc sulfate monohydrate is classifiable under the provision for zinc compounds: sulfate, in item 422.7600, TSUSA, and dutiable at the rate of 1.6 percent ad valorem.

The granulometry figures supplied for the copper sulfate indicate that it is suitable for use as a pigment. The copper sulfate is classifiable under the provision for other pigments: not specially

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

ES

provided for: not containing lead, in item 473.8820, TSUSA, and dutiable at the rate of 3.2 percent ad valorem

The literature submitted on the antimony trioxide Stibital indicates that this product contains 99 percent antimony trioxide. The sieve residue information indicates that it is suitable for use as a pigment. Antimony trioxide Stibital is classifiable under the provision for other pigments: not specially provided for: not containing lead, in item 473.8820, TSUSA, and dutiable at the rate of 3.2 percent ad valorem.

With respect to the zinc dust products, the zinc oxides, the zinc carbonate, zinc sulfate monohydrate, copper sulfate and antimony trioxide Stibital, this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Regarding the antimony trioxide commercial grade, your ruling request does not provide sufficient information to allow us to issue a tariff classification ruling. Requests for rulings must be submitted in accordance with Part 177, Customs Regulations.

The data sheet submitted on antimony trioxide commercial grade indicates that this product contains 75 percent antimony trioxide; however, none of the other ingredients are listed. Your ruling request should include a list of every ingredient in the antimony trioxide commercial grade and the percentage by weight of each ingredient. You should also submit a four ounce sample of the antimony trioxide commercial grade and information on the manner in which this product is used.

If you require further assistance regarding the requirements of Part 177, Customs Regulations, please contact National Import Specialist Joseph DiMaria, telephone number (212) 466-5769.

Sincerely,

Peter J. Raish
Area Director
New York Seaport

Ms. Kathleen M. Jackson
Import Manager
Brokers West
P.O. Box 88336
Seattle, WA 98188

Dear Ms. Jackson:

In your letter dated May 9, 1986, on behalf of Atlantis International, Woodinville WA, you inquired about the dutiable status of food pastes from Italy.

Eight products are described in your letter: onion paste, garlic puree, olive paste, caper paste, red chili paste, mustard, pesto, and anchovy puree. The first seven will be imported in 80 or 90 gram tubes, anchovy puree is packed in a 60 gram tube. Samples of the retail cartons for all products except caper paste were submitted and retained by this office.

Onion paste (made from onions, oil, salt, and natural flavorings), garlic puree (natural garlic, soya-oil, salt, preseratives), and caper paste (capers, salt, preservative) are described as products that may be used in the preparation of food dishes requiring the use of the fresh item. Olive paste (olives with their own oil, salt, preservative, flavoring) is used as a spread on bread or crackers, on pizza, in salads, or as an ingredient in pasta sauce. Red chili paste (chillies, vegetable oil, wine, preservative) may be used as a spread on bread or on crackers, as a seasoning on food, or as an ingredient in food dishes calling for chillies. Pesto (garlic paste, olive oil, pine seeds, salt, sugar, thickening agents) is a pasta seasoning which, when mixed with oil or butter, is applied directly to pasta before serving. Mustard (vinegar, mustard seeds, salt, corn flour, sugar, spices) is applied directly on sandwiches, or used in salads or sauces. Anchovy puree (anchovies, salt, vegetable oil) is used in food dishes calling for anchovies.

Anchovy puree is classifiable under the provision for fish balls, cakes, puddings, pastes, and sauces (including any of such articles in airtight containers), in item 113.0100, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 0.5 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E7

Onion paste is classifiable under the provision for vegetables... otherwise prepared or preserved...onions...other, in item 141.5000, TSUSA, and dutiable at the rate of 7 percent ad valorem.

Garlic puree is classifiable under the provision for vegetables... otherwise prepared or preserved...other, in item 141.9840, TSUSA, and dutiable at the rate of 17.5 percent ad valorem.

Olive paste is classifiable under the provision for fruit pastes... other, in item 152.8840, TSUSA, and dutiable at the rate of 15 percent ad valorem.

Mustard is classifiable under the provision for mustard, ground or prepared...other, in item 161.6000, TSUSA, and dutiable at the rate of two cents per pound.

Caper paste, red chili paste, and pesto pasta seasoning are classifiable under the provision for edible preparations not specially provided for...other, in item 183.0520, TSUSA, and dutiable at the rate of 10 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

CLA-2-07:S:CON:N3G:341
819743

Mr. Robert Olsen
Topline Products Co., Inc.
135 Broad Avenue
Palisades Park, NJ 07650

Dear Mr. Olsen:

In your letter dated July 18, 1986, you inquired about the dutiable status of a cosmetic case, style A-1000, from Taiwan.

Submitted to this office is a hinged two-piece plastic cosmetic case measuring approximately 4.75 inches square. Within the interior lid is affixed a mirror while the bottom portion contains varied plastic configured inserts which upon importation will be filled with cosmetic material.

You claim that the instant merchandise is properly classifiable under the provision for containers of rubber or plastics, with or without their closures, chiefly used for the packing, transporting, or marketing of merchandise in item 772.20, TSUS.

Schedule 7, Part 1, Subpart D, Headnote 2(c), TSUS, provides that "For the purposes of the tariff schedules..(c) the term '<u>flat goods</u>' covers small flatwares designed to be carried on the person, such as banknote cases, bill cases, billfolds, bill purses, bill rolls, card cases, change purses, cigarette cases, coin purses, coin holders, compacts, currency cases, key cases, letter cases, license cases, money cases, pass cases, passport cases, powder cases, spectacle cases, stamp cases, vanity cases, tobacco pouches, and similar articles."

It is noted that compacts and powder cases are among the exemplars covered by the term "flat goods" in the above provision. Furthermore, to be classified under item 772.20, TSUS, it must be shown that the cosmetic case is chiefly used in the packing, transporting, or marketing of merchandise. The chief use of an article is that use which exceeds all other uses combined.

This office feels it is more designed to be carried on the person as a "flat good." The term "designed to be carried on the person" has been defined as articles carried in the pocket, in the handbag, or on the person. Therefore, when used by the consumer, the instant merchandise will be used as a compact presumably carried in the purse or handbag.

E7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Since the cosmetic case, style A-1000, is more designed to be carried on the person, it is classifiable under the provision for flat goods, of other material, in item 706.6100, Tariff Schedules of the United States, and dutiable at the rate of 20 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

Peter J. Baish
Area Director

Ms. V. Ebel
Samincorp
110 East 59th Street
New York, NY 100223

Dear Ms. Ebel:

In your letter dated May 13, 1986, you inquired about the dutiable status of various chemicals from South Africa.

According to the information contained in your letter these products are to be used as frothers in complex ore treatment. Further by your telephone conversation we are assuming that 1, 3, 5 alkoxy substituted trioxane has only one functional group, and that the alkyl ammonium polymeric compound is not capable of being molded or shaped by flow at some stage during processing and that it is not derived from a fatty substance.

Based on these facts Senforth 38, 41G, 900 are classifiable under the provision for mixtures of two or more organic compounds in item 430.20, Tariff Schedules of the United States, and dutiable at the rate of 3.9 percent ad valorem, but not less than the highest rate applicable to any component compound. The highest rate applicable is for triethoxy butane classifiable under the provision for ether of a polyhydric alcohol in item 428.47, Tariff Schedules of the United States, and dutiable at the rate of 12.3 percent ad valorem.

Senforth TEB is classifiable under the provision for triethoxy butane in item 428.47, Tariff Schedules of the United States, and dutiable at the rate of 12.3 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Hartuge

Ms. Myrna Arce Akerblom
United Industries Inc.
P.O. Box 8011
New York, NY 10150

Dear Ms. Akerblom:

In your letter dated July 23, 1986, you inquired about the dutiable status of toast bread and gingersnap cookies from Sweden.

Samples accompanied your letter, were examined, and disposed of. "Swedish Toast Bread" consists of toasted, oval-shaped slices of bread packed in a 200 gram bag. The stated ingredients are wheat flour, whole wheat flour, sugar, vegetable margarine, yeast, salt, and malt. "Pepparkakor" (Swedish gingersnap cookies) are flat, circular cookies made from wheat flour, sugar, margarine, syrup, milk powder, spices, and baking soda. The samples are packed in a 300 gram bag.

The gingersnap cookies are classifiable under the provision for biscuits, cake, cakes, wafers, and similar baked products, in item 182.2000, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 0.4 percent ad valorem.

However, your inquiry does not provide enough information for us to give a classification ruling on the toast bread. Your request for a classification ruling should include a complete, step-by-step description of the manufacturing process.

Based upon the information you submitted, the toast bread would probably be classified under the provision for biscuits, cake, cakes, wafers, and similar baked products, in item 182.2000, TSUSA, with duty at the rate of 0.4 percent ad valorem.

With respect to the gingersnap cookies, this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)]. For the balance of the merchandise, this is an information letter issued under the provisions of Section 177.1(d)(2) of the Customs Regulations [19 C.F.R. 177.1(d)(2)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported.

Ms. Monique Eldridge
Traffic Manager
Bowes Co. Ltd.
75 Vickers Road
Islington M9B 6B6 Canada

Dear Ms. Eldridge:

In your letter dated July 23, 1986, you inquired about the dutiable status of aseptic processed fruit from Canada.

A description of the aseptic process and an ingredients list accompanied your letter. Two samples of the strawberry product, submitted under separate cover, were examined and disposed of. The products are composed of sugar, fruit (strawberry, raspberry, blueberry, peach, apricot, orange, cherry, or "mixed fruit"), corn syrup, water, pectin, citric acid, and flavor. Examination of the sample reveals a product consisting of large, recognizable strawberry pieces in a thick, free-flowing syrup. In a telephone conversation with National Import Specialist Stanley M. Hopard on August 1, 1986, your firm's Mr. Williamson indicated all fruit varieties will contain large pieces of fruit in a similar solution. The products, imported in 55 pound packages, will be used in dairy products such as ice cream or yogurt.

These aseptic processed fruits are classifiable in the provisions for fruits, otherwise prepared or preserved, as follows:

PRODUCT	TSUSA	RATE OF DUTY
Apricot	146.2400	35 percent ad valorem
Blueberry	146.7900	3.5 percent ad valorem
Raspberry	146.8400	7 percent ad valorem
Strawberry	146.8500	14 percent ad valorem
Cherry	146.9900	7 cents per pound plus 10 percent ad valorem
Orange	147.3160	One cent per pound
Peach	148.7800	20 percent ad valorem

E14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Mixed Fruit (not containing apricots, citrus fruits, peaches or pears)
150.0200 7 percent ad valorem

Mixed Fruit (containing any of the above noted fruits)
150.0500 17.5 percent ad valorem

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Sincerely,

Peter J. Raish

Chicago, Illinois 60625

Dear Mr. Duenas:

In your letter of July 21, 1986, you requested the tariff classification of "Cochineal Carmine, 52% Carminis Acid Code C.I. 75470" from Peru.

The prospective import was tested by the United States Customs Labortatory and reported out as a fine red powder which is a cocineal color lake or pigment.

"Cochineal Carmine, 52% Carminis Acid, Code C.I. 75470" is classifiable under the provision for other pigments in item 473.8820, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 3.2 percent ad valorem.

Articles classifiable under item 473.8820, TSUS, which are the products of Peru are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

Peter J. Walsh

Mr. Arthur Tessor
Hoffman LaRoche, Inc.
Nutley, NJ 07110

Dear Mr. Tessor:

In your letter dated July 23, 1986, on behalf of Medi-Physics, you inquired about the dutiable status of a Technetium TC 99 M-Albumin Aggregated kit from Canada.

The kit consists of reaction vials which contain the sterile, non-pyrogenic, non-radioactive ingredients necessary to produce Technetium TC 99M-Albumin for diagnostic lung imaging by intravenous injection. Each 10 ml reaction vial contains albumin aggregated, albumin human, stannous chloride and sodium chloride. The product is in its final dosage form when sterile isotonic sodium pertechnetate solution is added to each vile.

The Technetium TC 99 M Albumin Aggregated kit is classifiable under the provision for other, biological products in item 437.7600 Tariff Schedules of the United States, TSUSA, and is free of duty.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

This product may be subject to the regulations of the Food and Drug Administration. You may contact them at 5600 Fishers Lane, Rockville, Maryland 20857, telephone number (202) 443-3380.

P.O. Box 2456
Charlotte, N.C. 28211

Dear Mr. Hartis:

In your letter of June 29, 1986, you requested the tariff classification of seven organic pigments from India.

The following organic pigments are classsified under the provision for other benzenoid toners in item 410.3200, Tariff Schedules of the United States Annotated, (TSUSA), and are dutiable at 21.4 percent ad valorem:

Pigment Red 49:1
Pigment Red 49:2
Pigment Blue 15:3
Pigment Green 7
Pigment Green 36

The other two products, Pigment Blue 15:1 and Pigment Blue 15:2 are classified under the provision for other benzenoid toners in item 410.3400, TSUSA, and are dutiable at 15 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Herbert Schwarz
L. Bruggemann K-G
Salzstrasse 123/129
Postfach 1309
7100 Heilbronn Am Nekar, W. Germany

Dear Mr. Schwarz:

Your letter of June 15, 1986, concerns the classification of two products of West Germany called Blancolen K and Blancolen KU.

Blancolen K is a mixture of sodium dithionite, ethylenediaminetetraacetic acid (EDTA), sodium sulfate and sodium sulfite.

Blancolen KU is a mixture of the same components as those found in Blancolen K plus an optical brightener which you do not identify.

Blancolen K is classified under the provision for mixtures not specially provided for in item 432.28, Tariff Schedules of the United States (TSUS). The rate of duty is 3.9 percent ad valorem but not less than the highest rate applicable to any component material. Based on the EDTA sodium salt which is classified under the provision for other nitrogenous compounds in item 425.52, TSUS, the rate of duty is 7.9 percent ad valorem.

Your inquiry does not furnish enough information for us to issue a tariff classification ruling for Blancolen KU. Your request for a classification ruling on this product should include the identity of the optical brightener and a description of how the product is used.

Based on the information you submitted Blancolen KU would probably be classified under the provision for other benzenoid mixtures in item 413.54, TSUS. The rate of duty is 11.9 percent ad valorem but not less than the highest rate applicable to any component material.

With regard to the Blancolen K this is a ruling letter issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

With regard to the Blancolen KU this is an information letter issued under the provisions of Section 177.(d)(2) of the Customs Regulations [19 C.F.R. 177.1(d)(2)].

Mr. Edmund J. Corboy
Austin Chemical Company
8410 West Bryn Mawr Avenue
Chicago, Illinois 60631

Dear Mr. Corboy:

In your letter dated August 4, 1986, you inquired regarding the tariff classification of formyl sarcosine manufactured in Canada. Based on its chemical structure, this product is an acyclic amide.

Formyl sarcosine is classifiable under the provision for ethylureas, methylolureas, octamethylpyrophosphoramide and other acyclic amides, in item 425.2245, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 3.9 percent ad valorem.

In your letter you suggested that this product be classified under the provision for nitrogenous compounds: other, in item 425.5290, TSUSA. However, the provision for acyclic amides in item 425.2245, TSUSA, is clearly more specific than the provision for nitrogenous compounds: other in item 425.5290. Therefore, item 425.5290 does not apply.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

Peter J. Walsh
Area Director
New York Seaport

Chicago, IL 60631

Dear Mr. Corboy:

In your letter dated August 4, 1986, you inquired about the dutiable status of 4 hydroxy 1 pentene from Canada.

4 hydroxy 1 pentene is classifiable under the provision for unsubstituted monohydric alcohols, other in item 428.12, Tariff Schedules of the United States, and dutiable at the rate of 3.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

CLA-2-07:S:COM:N3G:341
818995

Ms. Eileen T. Romito
Coordinator of Direct Import Tariff Classification
Sears Merchandise Group
Sears Tower, Dept. 733X BSC 19-45
Chicago, Illinois 60684

Dear Ms. Romito:

Your letter of May 27, 1986, requested this office to rule upon the tariff classification of a novelty animal style child's shoulder bag, stock no.33121, from Hong Kong.

The sample submitted is a novelty animal shoulder bag manufactured of man-made textile pile fabric and measures approximately 13 inches by 7.5 inches. The bag simulates a little dog, identified as the "Luv Mutt," having stuffed legs and flappy knitted ears. The head and torso are empty. The bag is secured on its posterior side via velcro fasteners. Adhered to its exterior front surface is a textile motif of a little bear. It is carried via a woven textile shoulder strap measuring approximately 26.75 inches. Sample is being returned herewith.

You claim that it is neither a toy since it is not chiefly used as an animate object for the amusement of children nor can it be considered a shoulder bag since its utilitarian feature for carrying is not its predominate characteristic. Asserting that it is both more than a toy and a shoulder bag, you feel the instant merchandise is more properly classifiable under the provision for articles of textile, not specially provided for, of man-made fibers, ornamented, in item 386.1343, TSUSA, at the rate of 12.5 percent ad valorem.

In order to qualify for the above provision, the article in question would have to possess two coequal or significant functions neither of which is subordinate to the other.

Schedule 7, Part 1, Subpart D, Headnote 2(b), TSUS, provides that "For the purposes of the tariff schedules—(b) the term '<u>handbags</u>' covers pocketbooks, purses, shoulder bags, clutch bags, and all similar articles, by whatever name known, customarily carried by women or girls..."

G6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

REPLY TO: 1301 BUSINESS OF CUSTOMS, NEW YORK SEAPORT, NEW YORK, NEW YORK 10048

Although the item may have a dual usage as both a toy and a shoulder bag, this office feels that its amusement factor is only incidental and subordinate to its primary function as that of a shoulder bag. Therefore, the novelty animal shoulder bag, stock no. 33121, is classifiable under the provision for handbags, of other textile materials, other, in item 706.4140, Tariff Schedules of the United States. The rate of duty is 20 percent ad valorem.

Tariff item number 706.4140 falls within textile category designation 670. As a product of Hong Kong this merchandise is currently not subject to quota or export license restrictions based upon international textile trade agreements.

Due to the changeable nature of these agreements you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

Peter J. Baish
Area Director

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

JUN 25 1986

MAR 2-05 CO:R:E:E
729365 LR

TO : District Director of Customs
Laredo, Texas

FROM : Director, Entry Procedures
and Penalties Division

SUBJECT : Request for Internal Advice (Imported Broccoli)

This ruling concerns the country-of-origin marking requirements applicable to broccoli imported in bulk raw form and processed in the United States.

ISSUE:

Whether pursuant to Section 304 of the Tariff Act of 1930, as amended, and section 134.25, Customs Regulations (19 CFR 134.25), domestically repackaged foreign broccoli must be marked to indicate the country of origin where the imported broccoli has been processed in the United States by cutting to proper length, quartering or spearing, blanching, packaging, and freezing; whether such processing "substantially transforms" the imported product into a product of the United States, thereby exempting the repackaged product from country-of-origin marking requirements.

FACTS:

The broccoli in question is imported from Mexico in bulk form. After importation, the broccoli is graded, inspected, trimmed to proper length (four or five inches), cut in quarters or spears, steam blanched for six minutes, cooled, frozen solid and packaged. The size of the package varies depending on whether the broccoli is intended for retail or institutional use. By customer order, broccoli spears can also be made into 1 inch broccoli cuts or quarter inch chopped broccoli.

APPLICABLE LAW:

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304) provides in general that all articles of foreign origin imported into the United States, or their containers, shall be legibly and conspicuously marked to indicate the country of origin to an ultimate purchaser in the United States. Fresh vegetables and other natural products are exempt from individual marking, but the containers in which they reach the ultimate

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A3

purchaser are required to be marked. 19 U.S.C. 1304(a)(3)(J) and 19 CFR 134.33. Pursuant to 19 CFR 134.25, various products which are exempt from individual marking when imported in bulk quantities (including vegetables) are required to be marked with the country of origin on the package when they are repackaged in the United States in retail containers.

The critical question in this case is whether the broccoli has been subjected to a substantial processing operation which has resulted in the creation of a new and different article of commerce with a new name, character, or use. If the broccoli has been so substantially transformed, then it must be treated as a product of the United States. The processing plant would be considered the "ultimate purchaser" of the imported product, within the meaning of 19 U.S.C. 1304(a) and the requirements of 19 CFR 135.25 are not applicable.

It is a well-settled principle of customs law that in order for a substantial transformation to be found, an article having a new name, character, and use must emerge from the processing. United States v. Gibson-Thomsen Co. Inc., 27 C.C.P.A. 267, C.A.D. 98 (1940). The issue before the Customs Court in that case was whether hairbrushes and toothbrushes manufactured in the United States by inserting bristles into wooden handles imported from Japan were required to be marked as products of Japan. After careful examination of the statute and its legislative history, the Customs Court concluded that Congress had not intended the marking requirement to continue to apply to an imported article which is used in the United States as a material in the manufacture of a new article having a new name, character, and use, and which consequently loses its separate identity in the finished product.

This decision was followed and quoted extensively in Grafton Spools, Ltd. v. United States, 45 Cust. Ct. 16, 23, C.D. 2190 (1960), in which empty metal spools imported from England and wrapped in the United States with inked ribbons to create typewriter ribbons and business machine ribbons were found to have lost their identity in the finished product. The court observed that what the ribbon manufacturers were selling were ribbons, which of course had to be wound on a spool, but it was the ribbon and not the spool which the manufacturer's customers were interested in purchasing.

One of the most significant recent court decisions on the issue of country of origin marking is Uniroyal Inc. v. United States, 3 C.I.T. 220, 542 F. Supp. 1026 (1982), aff'd, 702 F.2d 1022 (Fed Cir. 1983). In this case the merchandise before the Court of International Trade consisted of "footwear uppers consisting of complete shoes except for an outsole...",

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A4

729365

manufactured in Indonesia, and imported into the United States where a pre-shaped rubber outsole was affixed and the completed shoe was sold to retailers. The question was whether the addition of the outsoles substantially transformed the uppers so that the finished shoe could be marketed in the United States without having to be marked as a product of Indonesia.

After carefully examining both the imported upper and the finished shoe, the Court of International Trade concluded that the imported upper did not lose its distinct identity in the finished shoe, and to the contrary was the very essence of the completed shoe. This was so even though the imported upper could not be sold to or worn by consumers without the heavy rubber outsole being attached, and even though following attachment of the rubber outsole the shoe was called by a different name, a deck shoe, rather than an upper or a moccasin.

In the most recent country of origin marking case involving the issue of substantial transformation, National Juice Products Association v. United States, Slip Op. 86-113, (January 20, 1986) the Court of International Trade upheld Customs' determination that imported orange juice concentrate is not substantially transformed when it is processed into retail orange juice products. The court stated "the retail product in this case is essentially the juice concentrate derived in substantial part from foreign grown, harvested, and processed oranges. The addition of water, orange essences, and oils to the concentrate, while making it suitable for retail sale does not change the fundamental character of the product, it is still essentially the product of the juice of oranges." See also Uniroyal Inc. v. United States, supra.

ARGUMENTS PRESENTED

The importer maintains that the domestic processing substantially transforms the imported raw broccoli into a new article of commerce with a different name, character and use. Specifically, it is claimed that:

1) the broccoli undergoes a physical change from its imported state in that the shelf life is greatly extended from a few days to over a year;

2) the market for fresh broccoli and the market for frozen broccoli are distinct and well-established;

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A5

729365

3) the process is complex requiring a multi-million dollar investment in equipment and specialized buildings and trained personnel earning up to $11.00 an hour to operate it; over 300 employees are necessary for the process;

4) the machinery used for quick freezing and packaging the product use a high level of technology; and,

5) the domestic processing increases the cost of the broccoli from $.09 a pound (wholesale) to approximately $1.39 a pound (retail).

A detailed description of the processing steps, including the type of machinery used in each step and the number of employees necessary to operate them, has been submitted.

729365

ANALYSIS

A close examination of these processing operations is necessary to determine whether they substantially change the imported broccoli so that its fundamental character and identity are lost or subordinated in the finished product. If so, then a new and different article can be presumed to have been created.

The crucial operations performed on the imported bulk broccoli are trimming and cutting, and blanching and freezing. The trimming and cutting operations are fairly self-explanatory. As indicated above, after importation the imported bulk broccoli is trimmed to four or five inch lengths and then either chopped or cut into spears or quarters. The designation on the package is based on how the broccoli is cut. After cutting, the broccoli is blanched.

The blanching process prepares the broccoli for freezing. The process has been described as "subjecting vegetables either to hot water or steam to deactivate the enzymes before freezing. Unless deactivated the enzymes in fresh vegetables might, and probably would, result in loss of flavor and color during the period of frozen storage." Border Brokerage Co., Inc. v. United States, 284 F. Supp. 806, C.D. 3437 (1968) at p. 488. In Green Giant Co. v. United States, 495 F.2d 775, 61 C.C.P.A. 46 (1974), the blanching process was said to partially cook and retard any deterioration of the vegetable from within. In this case, the broccoli is steam blanched for six minutes at 210 degrees Farenheit.

After cooling and packaging, the broccoli is quick-frozen. Depending on the particular cut of the broccoli and whether it is intended for institutional or retail use, the freezing process takes from 30 minutes to 8 hours. As a result of the freezing

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A6

process, the shelf life of the broccoli is prolonged from 2-3 weeks to 6-8 months, provided frozen storage conditions are maintained.

After having reviewed the material submitted to Customs, we are of the opinion that as a result of the processing described - the cutting, blanching and freezing operations - the imported broccoli does not lose its fundamental character and identity and is not substantially transformed into a new article of commerce with a different name, character, and use.

The name of the imported article remains the same after processing, although it may have different modifiers preceding it. The imported product may be known as "fresh" broccoli whereas the processed products may be described as "frozen" broccoli or "chopped" broccoli. This does not change the fact that the fundamental identity of the imported product (as broccoli) is maintained, and not lost or subordinated in the processed product. Although some consumers may distinguish between the imported product and the processed product, that is, some consumers prefer fresh broccoli when it is available; and although fresh broccoli has some uses for which processed broccoli is less satisfactory, nonetheless it appears that broccoli processed in the manner described here is interchangeable with fresh broccoli for many purposes.

It is significant that the processes described here, far from transforming the character of the broccoli, are preservative in nature and are intended to maintain to the extent possible the characteristics of the imported product. Certainly, the imported product cannot be said to have been used in a manufacturing process in which its identity is lost or subordinated as would be the case if, for example, it were used in the manufacture of canned soup or frozen quiches.

HOLDING:

In view of the absence of significant distinctions between the commercial consequences of processing in the Uniroyal and National Juice Products Association cases, and the consequences which result from the processing described in this case, it is our opinion that the imported broccoli is not substantially transformed into a new and different article, that it remains after processing a product of the country where the fresh product was produced, and that broccoli processed in this manner must be marked with the name of the country in which the fresh broccoli is produced.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A1

729365

SCOPE OF RULING: Although this ruling was requested to clarify applicability of the country of origin marking statute to imported broccoli which is processed for freezing in the United States, this ruling is equally applicable to other imported produce which is processed in a manner substantially similar to the processing described above. Parties who desire to have the Customs Service clarify applicability of this ruling to particular situations should contact the Director, Entry Procedures and Penalties Division, U.S. Customs Service, 1301 Constitution Avenue N.W., Washington, D.C. 20229

EFFECTIVE DATE:

In compliance with the direction of the Court of International Trade in the National Juice Products Association case, Customs has made a special effort to obtain information for the purpose of establishing an effective date for this ruling. As part of on-site visits to food processing plants along the Mexican border in Texas, Customs officials obtained information on inventories of packaging materials and usual schedules for ordering new packaging materials. It appears that packaging is ordered to accommodate processing of the produce of a particular growing season. Both processors and Customs officials along the border agreed that the current growing season and importation of produce for processing ends during November. Therefore, this ruling will be effective as to produce imported on or after December 15, 1986.

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON, D.C. 20229

JUL 10 1986

CPR-3 CO:R:E:E
729677 A

The following policy ruling on procedures for dealing with competing copyright registrations is published for general guidance of Customs and the public; any previous rulings to the contrary are not to be relied upon.

ISSUE:

What is the position of the Customs Service in protecting a registered and recorded copyright when a questioned article is itself covered by a certificate of registration issued by the Copyright Office?

FACTS:

Customs is experiencing an increasing number of claims from importers of seized or detained articles that those articles should be released merely because they, themselves, are covered by a Copyright Office certificate of registration. Some certificates have been obtained prior to importation and some only after Customs has seized or detained the goods. On the other side, copyright owners have complained that the law neither requires nor sanctions release under these circumstances, and to do so makes a mockery of effective enforcement against piratical copies.

LAW AND ANALYSIS:

Section 602 of the Copyright Act (17 U.S.C. 602) prohibits the importation of articles which are infringing copies of U.S. copyrights recorded with Customs. Section 410(c) of that Act provides that in any judicial proceedings a certificate of registration issued by the Copyright Office shall constitute prima facie evidence of the validity of the copyright and of the facts stated in the certificate; the evidentiary weight of the certificate shall be within the discretion of the court. The implementing procedures for obtaining Customs protection and processing violations of section 602 are found in Part 133 of the Customs Regulations (Title 19, Code of Federal Regulations Subparts D, E and F).

In the past, the defense of competing certificates of registration was infrequently raised but it was accepted in a number of cases on an ad hoc basis. In some instances, the certificate was acquired prior to importation, and in others, it

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

appeared reasonably obtained by a reputable firm. Also, Customs was careful not to appear to encroach on the courts' functions of passing on a certificate's validity under section 410(c), since the registrant vouches for the independence and originality of a copyright when he signs the certificate.

Recent representations and occurrences strongly suggest that the competing registration defense is about to become widespread, if acceptable to Customs. An underlying problem is that it is extremely easy to register a claim to copyright since the Copyright Office is merely an office of record and will register documents if "fair on their face," similar to a registry of deeds.

Review establishes that a Copyright Office certificate of registration is significant mainly for shifting the burden of proof as to the facts stated in the certificate from the plaintiff to the defendant in a proceeding involving copyright infringement. Wihtol v. Wells, 231 F. 2d 550, 553 (7th Cir. 1956). In cases where Customs would otherwise have taken action against the imported goods, it does not seem legally required or desirable enforcement practice to release the goods on the sole basis that they are also the subject of a certificate evidencing copyright. A recent order in the case of New Bright Industrial Co., Ltd. and New Bright Industries, Inc. v. Cheng Ching Toy Co. Ltd., et al., 85 Civ. 3695, Bramwell, J. (U.S.D.C. E.D.N.Y. January 8, 1986), would seem to support this position as an administrative practice since the Judge in a copyright infringement suit (involving robot toys) directed that the Customs Service should enforce its regulations concerning the seizure and detention of suspected piratical copies " * * * as though (the defendant) did not possess a copyright registration."

A recently distributed internal Service communication advised all Customs officers that a competing certificate would not be accepted as conclusive proof of original authorship when obtained after the importation of goods suspected or determined to be infringing copyrights previously recorded with Customs. Although a copyright registration certificate acquired prior to importation is arguably somewhat more persuasive of originality than one obtained only after Customs has seized or detained imported goods, it is similarly subject to question and may be disregarded when other evidence indicates piratical copying.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

72967

It is highly unlikely that Customs will detain legitimately copyrighted goods, but if that should occur, a detention procedure would promptly result in clearance because the Customs copyright recordant would confirm that the importation was not infringing.

HOLDING:

When evidence clearly indicates piratical copying or reason to suspect piratical copying of a copyright recorded with Customs, and the imported article itself is the subject of a copyright registration certificate (whether obtained before or after importation), Customs officers shall detain the merchandise and proceed under section 133.43 of the Customs Regulations (19 CFR 133.43).

729677

799477

TREASURY DEPARTMENT

BUREAU OF CUSTOMS

WASHINGTON

CIRCULAR: MAR-2-RM
DATE: APR 21 1969

Subject : MARKING: Country of Origin - Napkins, aprons, and similar articles imported for the rental linen supply trade.

References: 19 U.S.C. 1304

1. PURPOSE

To advise that marking the name of the country of origin on the containers only of imported aprons, napkins, and similar flatware shall be deemed to meet the requirements of 19 U.S.C. 1304 under certain circumstances.

2. BACKGROUND

The Bureau has recently reviewed the manner in which the country of origin marking requirements are being applied to various articles which are being imported for sale to the linen rental supply trade. The reports received by the Bureau have disclosed that articles such as napkins and aprons are usually imported in plastic packages containing approximately 25 items with a paper slip indicating the country of origin prominently displayed inside the package. The plastic packages are in turn packed in large bales which are also legibly and conspicuously marked to indicate the country of origin.

Information furnished to the Bureau indicates that when such rental supply items are imported by jobbers or wholesalers for resale to linen supply laundries, sales are made by the bale or in the original plastic packages. Such information also indicates that the rental supply laundries use these items only in their rental supply business and do not resell the articles until they have lost their usefulness and are sold as rags.

3. ACTION

The "ultimate purchaser" of the imported articles in question are considered to be the rental supply laundries, within the meaning of 19 U.S.C. 1304(a). Accordingly, when aprons, napkins, or similar flatware imported for sale to the rental supply trade are packaged in containers of approximately 25 items which are legibly and conspicuously marked to indicate the country of origin of the contents, and the jobber or wholesaler furnishes a statement

[redacted]

A12

REPLY TO: COMMISSIONER OF CUSTOMS, WASHINGTON, D.C. 20226

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

to customs stating that the goods will be sold only in the marked containers to the linen supply trade, the items may be excepted from individual marking to indicate the country of origin pursuant to 19 U.S.C. 1304(a)(3)(D) and section 11.10(a) of the Customs Regulations.

Information received by the Bureau indicates that rental wearing apparel other than aprons, such as washable coveralls, shirts, and trousers, have been individually marked to indicate the country of origin, and such items shall continue to be marked whether or not destined for rental laundries.

[redacted]

799529

JAN 26 1971

MM 363.2 K

Mr. Michael Stramiello, Jr.
Regional Commissioner of Customs
New York, New York 10004

Attention: Mr. Irving Fishman
Director, Division of Imports Compliance

Dear Mr. Stramiello:

This is in reference to your letter of January 8, 1971, regarding exceptions from marking in the case of products used by the rental laundry trade, such as towels, aprons, napkins, etc.

You say that up until now these articles have been imported in uniform quantities in packages which bore the information required by 19 U.S.C. 1304 and the Textile Fiber Products Identification Act, but that you have now been requested to waive the marking of the packages in the case of the importation of such merchandise in bale lots. The importers apparently contend that these goods are sold to the rental laundries only in full bales rather than in packages.

At the time Bureau Circular MAR-2-RM, April 21, 1969, was issued, the information we had indicated that the articles in question were not always sold in full bale quantities by the importer or wholesaler, to rental supply laundries, but that they would not be sold in less than full package quantities in any case. Accordingly, as a general rule, we are of the opinion that the inner packages in the bales must be marked to indicate the country of origin.

However, if you have a situation where the rental laundry which will purchase and use the articles is known at the time of entry, and furnishes a statement that they will receive the goods in the particular shipment in the original marked bales in which imported, the marking of the outer bale to indicate the country of origin would meet the requirements of 19 U.S.C. 1304, in our opinion.

Sincerely yours,

NEW YORK, N.Y.

MAR 24 1983

REFER TO

CLA-2-06:S:C:D1:09-102
805240

[redacted]

Dear [redacted]

In a letter dated February 3, 1983, you inquired as to the dutiable status of a wrist watch television produced in Japan.

The unit is described as a tv-wrist watch and is to be imported with the following units:

1. A wrist watch with a bracelet which has a 1.2 inch liquid crystal display and digital time piece set in a case measuring 1.7 cm by 2.5 cm.
2. A headphone with connecting cord which acts as a speaker for the unit with an incorporated antenna.
3. A receiver unit with VHF and UHF channels together with an FM radio.
4. Belt clip for the receiver unit. This allows the receiver unit to be worn on the belt.
5. Carrying pouch for the receiver.
6. Connecting cord from receiver to watch.
7. AC adapter.
8. Packing box for the entire set.
9. Two AA batteries.

In addition to the units being imported together as a set, each unit in the set will be imported separately.

When imported as a set, the wrist watch with a bracelet, headphone with a connecting cord which acts as a speaker for the unit, the carrying pouch, belt clip, receiver, and connecting cord are classified as a single tariff entity under the tariff provision for combinations incorporating television receivers in item 685.50 TSUS at 6.2% ad valorem. The AC adapter is classified in item 682.60 at 5.3 percent ad valorem as rectifying apparatus. The AC batteries are classified as primary batteries and parts thereof in item 682.95 TSUS at 6.9 % ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B1

The gift box is a container for the subject items and is considered packing. Packing is dutiable at the same rate of duty as the contents.

When imported separately, the units would be classified as follows:

1. Wrist watch with a bracelet which has a 1.2 inch liquid crystal display and a digital timepiece as television apparatus in item 685.19 TSUS at 4.4 percent ad valorem.
2. Receiver unit with VHF and UHF channels and FM radio capability as a combination unit in item 685.50 TSUS at 6.2 percent ad valorem.
3. Belt clip as articles not specially provided for, of plastic, in item 774.55, TSUS, dutiable at 6.9 percent ad valorem.
4. Headphone as headphones in item 684.70, TSUS dutiable at a rate of 6.2 percent.
5. Connecting cord from receiver to watch as insulated electrical conductors whether or not fitted with connectors: With fittings: Other...in item 688.15 TSUS at 5.9%.
6. AC adapter in item 682.60 TSUS at 5.3 percent ad valorem as rectifying apparatus.
7. Two AA batteries as primary batteries and parts thereof...item 682.95, TSUS at 6.9%

Regarding the carrying case, the information submitted is not sufficient in order to render a ruling decision. Request for rulings must be submitted in accordance with Part 177, Customs Regulations. Your request should include a sample of the finished product and explanatory literature as to use.

Based upon the information you submitted, the carrying case if imported without the contents would probably be classified under the provision for luggage in item 706.62, TSUS, with duty at the rate of 20 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Sincerely,

John J. Martuge

REFER TO
CLA-2-01:S:C:D4:37:84
805296

[redacted]

Dear [redacted]

In a letter dated February 17, 1983, you inquired as to the dutiable status of garlic paste produced in Italy.

You indicate that the product is garlic in the form of a paste which is to be used for general purposes in substitution for fresh garlic cloves. The sample submitted with your inquiry was a 3¼ ounce (90 gram) tube of garlic paste (aglio in pasta) and the ingredients were listed as natural garlic, soya oil, salt, and sulphur dioxide (a preservative). The label indicates that a tube of garlic paste is equal to one kilogram of fresh garlic and that the paste can be used in all recipes which call for garlic.

Garlic paste is classifiable under the provision for other vegetables, prepared or preserved, in item 141.98, Tariff Schedules of the United States, and dutiable at the rate of 17.5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Sincerely,

John J. Martuge
Area Director
New York Seaport

[redacted]

Dear[redacted]

In a letter dated December 16, 1982, received in this office February 24, 1983 for reconsideration, you inquired as to the dutiable status of titanium diboride.

You describe the titanium boride as an inorganic chemical compound, composed of aggregates of two different phases. The analysis submitted with your inquiry shows the composition to be 30.5% boron, 0.14% carbon, 0.3% oxygen, 0.2% nitrogen, and the balance titanium.

Titanium diboride is classifiable under the provision for titanium unwrought in item 629.14, Tariff Schedules of the United States, and dutiable at the rate of 17 percent ad valorem.

This ruling holding titanium boride to be classifiable as titanium unwrought which includes metal alloys is based on Headnote 2, Part 2, Schedule 6, Tariff Schedules of the United States, which provides that alloys are metallic substances consisting of two or more metals or of one or more metals and one or more non-metals, intimately united.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1 (a)(1)].

Sincerely,

John J. Martuge

Mr. Y. Kobayashi
Mitsubishi International Corporation
520 Madison Avenue
New York, N.Y. 10022

Dear Mr. Kobayashi:

In your letter dated February 28, 1984, you inquired about the dutiable status of "susmic fibers" from Japan.

"Susmic fibers" consist of fibers shaved from stainless steel wire and mixed with plastic resin. The plastic resin functions to hold the fibers together for shipping and handling purposes. The major applications of this product are in the production of electrically conductive plastic for electronic housings and for use in the production of antistatic carpets. The fibers range from 5um to 50um in diameter and from 0.5 millimeters to several kilometers in length. The length and thickness is provided as ordered. The product is in chief value of steel.

"Susmic fibers" are classifiable under the provision for articles of iron or steel, not coated or plated with precious metal in item 657.2590, Tariff Schedules of the United States, and dutiable at the rate of 6.7 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Hartunge

Ms. Debbie Zerda
James J. Boyle & Co.
529 Commercial Street
San Francisco, CA 94111

Dear Ms. Zerda:

In your letter dated February 4, 1985, on behalf of the Sumitomo Corp., you inquired about the dutiable status of chopped steel wool fiber from Japan.

The chopped steel fibers are produced in two grades. Grade One has an average fiber width of 0.00157 inch, an average length of 0.0945 inch and a maximum length of 0.157 inch. Grade Two has an average fiber width of 0.00197 inch, an average length of 0.0965 inch and a maximum fiber length of 0.197 inch. This product is generally produced by knife-shaving wire lengthwise and then chopping it to the appropriate length although a variety of other production processes are possible. Chopped steel fibers are becoming an important product used in the production of disc brake pads as well as for reinforcing plastic and concrete, sound absorption, shielding electronics and other uses.

This merchandise is classifiable under the provision for articles of iron or steel, not coated or plated with precious metal in item 657.2590, Tariff Schedules of the United States, and dutiable at the rate of 6.7 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Hartuge

Mr. M.M. Halim
President
M.M. Halim Import/Export
8185 Snowfall Drive
Manassas, VA 22111

Dear Mr. Halim:

In your second letter dated May 24, 1985, you sent additional information to determine the dutiable status of various products from Egypt.

The "Papyrus" is a hand painting on paper made manually from the "Papyrus" plant. Each paper and painting is less than two years old. There are no stencilling, photochemical, or other mechanical processes used in the creation of the painting.

Noting that a certificate accompanies each painting, it appears that each "Papyrus" will be used as a painting and is classifiable as such in item 765.0300, Tariff Schedules of the United States Annotated, and is free of duty.

However, your inquiry does not provide enough information for us to give a classification ruling on the other products.

Items 2, 2A and 3, called Galabeiahs, are not described in your letter. We are unable to issue a classification ruling without samples of each garment and a statement giving the size range, gender of the intended wearer and the fiber content by percentage of weight of the generic fibers present in each garment.

Based on the photographs marked numbers 2 and 2A, the garment pictured would probably be classified under one of the following tariff provisions.

1) When in chief value of cotton: under the provision for women's, girls', or infants' wearing apparel, ornamented, of cotton, not knit, in item 383.0820, TSUSA, dutiable at 23 percent ad valorem. The textile category designation is 350.

2) When in chief value of wool: under the provision for women's, girls', or infants' wearing apparel, ornamented, of wool, not knit, in item 383.1605, TSUSA, dutiable at 31.2 percent ad valorem. The textile category designation is 459.

B7

REPLY TO: REGIONAL COMMISSIONER OF CUSTOMS, NEW YORK, NEW YORK 10048

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

3) When in chief value of man-made fibers: under the provision for women's, girls', or infants' wearing apparel, ornamented, of man-made fibers, not knit, in item 383.2320, TSUSA, dutiable at 31.2 percent ad valorem. The textile category designation is 650.

As a product of Egypt this merchandise is not subject to a visa requirement or quota restraints at this time.

In the absence of a sample we are unable to issue a decision on the classification of scarves and shawls as requested.

With respect to the "Papyrus", this is a ruling letter issued under the provision of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1). For the balance of the merchandise, this is an information letter issued under the provisions of Section 177.1(d)(2) of the Customs Regulations (19 C.F.R. 177.1(d)(2)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

for John J. Hartuge
Area Director

Ms. Meiling Liu
Shye Shing Tea Company
141 Prince Edward Road
Flat K. 11th Floor
Kowloon, Hong Kong

Dear Ms. Liu:

In your letter of May 24, 1985, you requested the tariff classification of slimming crystal from Hong Kong.

Slimming crystal is described as a health food item that will "increase the secretion of gastric juice and bile, resolve fat, enlarge the coronary artery, improve blood circulation, prevent the absorption of cholesterol from foodstuff, increase the excrement of cholesterol and reduce capillary permeability."

It is composed of hunan tea leaves, radix salviae miltiorrizae, radix polygoni multiflori, fructus crataegi, etc., all of which are made of plants that are beneficial to human beings. The product does not have any laxative effect.

The slimming crystals will be imported in single dose aluminum foil packets. It is recommended that three of these packets be taken a day in lukewarm water.

Slimming crystal is classifiable under the provision for other, non-benzenoid drugs in dosage form in item 440.0000, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate provided for such product in this subpart, but not less than 4 percent ad valorem. In this case the rate is 4 percent.

This merchandise is subject to the regulations of the Food and Drug Administration and must meet their requirements in order to be imported. You may contact them at 5600 Fishers Lane, Rockville, Maryland 20587, telephone number (202) 443-3380.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

210 Division Street
Kingston, PA 18704

Dear Mr. Esopi:

In your letter dated July 3, 1985, you inquired about the dutiable status of a chest of drawers from Denmark.

The chest of drawers is composed of wood particle board which is laminated with a melamine coating. It is designed and constructed as a floor standing article of utility. The chest of drawers is to be used in the home for storage of clothing, linens or other household articles.

The chest of drawers is classifiable under the provision for furniture of wood in item 727.3555, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 3.1 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. Mr. Bradford A. Miller
Pabra Corporation
154 Overlook Avenue
Suite 2D
Peekskill, New York 10566

Dear Mr. Miller:

In your letter dated July 17, 1985, you inquired about the dutiable status of bread dough Christmas tree ornaments from Ecuador. Two samples of the merchandise were provided with your request.

The merchandise is question consists of bread dough Christmas tree ornaments, approximately 2 inches in size. One sample is in the form of a five pointed star with a flower ornamenting its center and the other sample is in the figure of a Santa head. The ornaments cannot stand unsupported but have hangers for tree trimming.

There is no provision in the Tariff Schedules of the United States (TSUS) covering merchandise of this kind. Therefore, merchandise represented by the submitted samples is classifiable under the provision for any article, not specially provided for elsewhere in the tariff schedules, in item 798.0000, TSUS, and dutiable at the same rate as the enumerated article to which it most resembles as to use. This merchandise is therefore classifiable by similitude as a Christmas tree ornament in item 772.9500, TSUS, dutiable at the rate of 6.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Bruce L. Stuart
M. E. Franks, Inc.
150 Radnor-Chester Road, Suite C-210
St. Davids, PA 19087

Dear Mr. Stuart:

Your letter of October 17, 1985, concerns the dutiable status of a partially delactosed skim milk powder. Your inquiry does not identify the country of origin of this merchandise.

Fresh skim milk is processed by ultra filtration, evaporation and spray drying. The partially delactosed skim milk powder has excellent water binding capacity and swelling ability. It is used as an ingredient in bakery products and other food applications where less lactose is required. The typical composition of the partially delactosed skim milk powder is as follows:

Milk fat	1 - 2%
Protein	65 - 70%
Lactose	20 - 22%
Moisture	4 - 5%
Ash	5 - 6%

You believe your product should be considered a milk protein concentrate and as such you believe it should be classified in item 118.45 of the Tariff Schedule. We agree with your position.

The partially delactosed skim milk powder is classifiable under the provision for milk protein concentrate in item 118.4500, Tariff Schedules of the United States. The duty rate is determined by the country of origin. Products of most favored nations are dutiable at the rate of .2 cent per pound. Products of certain Communist controlled nations are dutiable at the rate of 5.5 cents per pound. Products of certain developing countries may be entitled to duty concessions. A complete listing of countries may be found in General Headnote 3, Tariff Schedules of the United States (19 U.S.C. 1202).

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Please be advised that a copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported.

Mr. Sean Hokari
Vice President
Mitsui & Co. (U.S.A.), Inc.
200 Park Avenue
New York, NY 10166-0130

Dear Mr. Hokari:

In your letter dated January 9, 1986, you inquired about the dutiable status of a creamed whey cheese containing cow's milk from Norway.

This product, described as Natural Creamed Whey Cheese, is said to contain (within a tolerance range of two percent on either side) 40 percent fat in the total matter, 40 percent non-fat milk solids, and 20 percent moisture. The fat content in the dry matter is specified at a maximum of 51 percent. According to the information provided, this cheese is made from whey which is the by-product of a cheese making operation. After separation from the curd, the whey is mixed with milk or cream and then evaporated to a solids content of about 50 percent. A second, further evaporation under vacuum is made to concentrate the mixture to the solids/moisture level of the final product. The finished mixture is poured into cartons lined with inner polyethelene bags. After sufficient time for cooling has elapsed, the bags and cartons are sealed and are then ready for storage or shipping. Each carton holds about 35 pounds of product.

A sample carton, submitted with your inquiry, contained a soft yellow paste with a fat content, on analysis, of 39.5 percent in the total matter and 47.7 percent in the dry matter. The sample generally appeared to meet the physical specifications listed in your letter. The cheese had a bland, fatty taste, with a mildly perceptable sweetness and a slight grittiness. Although a whey cheese, this product lacks the typical brown or light tan color and carmelized flavor of traditional Gjetost cheese. Accordingly, classification of this cheese under the provisions for Gjetost cheese in items 117.3000 or 117.3500, Tariff Schedules of the United States, would be precluded.

Natural Creamed Whey Cheese is classifiable under the provision for other cheeses, and substitutes for cheese in Part 4C of Schedule 1, Tariff Schedules of the United States (TSUS). If valued not over 25 cents per pound, this cheese is classifiable in item 117.7555, TSUS, and dutiable at the rate of 5 cents per pound. If valued over 25 cents per pound, this cheese is classifiable in item 117.8855, TSUS, and dutiable at the rate of 10 percent ad valorem.

C1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Cheese classifiable in items 117.7555 or in item 117.8855, TSUS, is subject to quota restrictions listed in item 950.10D in Part 3, Appendix to the Tariff Schedules. Additionally, an import license, issued to the importer by the United States Department of Agriculture, would be required at the time of entry of such merchandise.

Questions regarding licensing procedures and applications for license to import cheese subject to quota should be addressed to:

Head, Dairy and Import Group
Dairy, Livestock and Poultry Division
Foreign Agriculture Service
United States Department of Agriculture
Washington, D.C. 20250

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Ms. Corky Merril
Bostrum Warren, Inc.
P.O. Box 24285
Seattle, WA 98124

Dear Ms. Merril:

In your letter of February 11, 1986, on behalf of Hanbae America, Inc., you requested the tariff classification of two plastic "snow joggers", style "Sierra", from Korea.

The sample that you submitted first is white, and its polyurethane "upper" continues down for 3/4 inch below where it meets the top edge of the vinyl "mudguard." If one removed the mudguard, the foot would not be exposed.

The sample that you submitted two weeks later is purple, and its polyurethane "upper" only continues down for 1/4 inch below where it meets the top edge of the vinyl "mudguard." If one removed the mudguard, there would be a 1/2 inch vertical gap where the side of the foot would be covered only by the lining of the upper.

Except for the color and the amount that the mudguard overlaps the upper, the two shoes are identical. Both are snow joggers, and they have studded rubber outsoles, EVA midsoles and wedges, fleece lining in the foot area, and a thick foam lining in both the foot and shaft areas.

The white boot is classifiable under the provision for footwear, which is over 50% by weight of rubber and plastics; in which leather covers less than 50% of the exterior surface area of the upper; which has a foxing-like band applied or molded at the sole and overlapping the upper; which has uppers of nonmolded construction formed by sewing the parts thereof together and having exposed on the outer surface a substantial portion of functional stitching; and which is protective against water, oil, grease or cold or inclement weather, in item 700.3700, TSUS, and dutiable at the rate of 37.5 percent ad valorem.

The purple boot is classifiable under the provision for footwear, which is over 50% by weight of rubber and plastics; in which leather covers less than 50% of the exterior suface area of the upper and rubber and plastic cover 90% or more; and which does <u>not</u> have a foxing-like band, in item 700.5646, Tariff Schedules of the United States, and dutiable at the rate of 6 percent ad valorem.

Dear Mr. Brosseau:

In your letter dated February 19, 1986, you inquired about the dutiable status of a vinyl pencil case from Taiwan. Your inquiry is on behalf of Sidmax Incorporated of Canada.

The submitted sample is a vinyl novelty pencil case. It measures approximately 13-1/2 inches long by 3 inches wide with a zippered closure and crimped ends to simulate a candy wrapper. It is noted the sample is marked with the country of origin not in the English language. In accordance with Section 304, Tariff Act of 1930, foreign merchandise must be marked in a conspicious place and a legible manner so as to indicate to the ultimate purchaser in the United States the English name of the country of origin of the article.

The vinyl pencil case is classifiable under the provision for Flat goods, of other materials, other, in item 706.6100, Tariff Schedules of the United States Annotated, and dutiable at the rate of 20 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

MSA International
P.O. Box 426
Pittsburgh, PA 15230

Dear Mr. Bell:

In your letter dated February 21, 1986, you inquired about the dutiable status of gloves from China. Three pair of gloves were submitted with your request.

The samples, styles 6177-825, 6177-336, and 6177-843 are vinyl work gloves with seamed cotton liners.

The procedure generally used in manufacturing these gloves is by a dipping process in which the cotton liner is dipped into a polyvinyl chloride plastic solution resulting in a cotton interior and a plastic exterior.

The three sample pair of gloves are classifiable under the provision for gloves of rubber or plastics, other than seamless, in item 705.8600, Tariff Schedules of the United States Annotated, and dutiable at the rate of 16.6% ad valorem.

Gloves classifiable in item 705.8600 are not subject to quota restrictions or visa requirements from China.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge
Area Director

Raschig Corp.
P.O. Box 7656
Richmond, VA 23231

Dear Ms. Morin:

In your letter dated February 21, 1986, you inquired about the dutiable status of Ralox 02 from West Germany.

Ralox 02 is 4,4'-methylene-bis-(2,6-ditert. butyl-phenol). Your literature indicates the product is a high-efficient long-term stabilizer for use in industrial oils and also is used as a non-staining antioxidant for hot melts and hydrocarbon resins.

Ralox 02 is classifiable under the provision for other phenols and their derivatives in item 403.5100, Tariff Schedules of the United States Annotated, and dutiable at the rate of 8.1 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Hartuge

Mr. T. Yano
Toyomenka (America) Inc.
Nine Greenway Plaza
Houston, Texas 77046

Dear Mr. Yano:

Your letter of March 7, 1986, concerns the current tariff status of a product of Korea which you call C-9 Aromatics or Korean Solvent C-9.

Korean Solvent C-9 is a mixture composed of approximately 47 percent by weight of non-dutiable benzenoid compounds. Most of the balance is composed of dutiable alkylbenzene compounds, no one of which is over 25 percent by weight of the mixture.

Korean Solvent C-9 is classified under the provision for mixtures in whole or in part of any of the products provided for in Schedule 4, part 1, subpart B, Tariff Schedules of the United States Annotated (TSUSA), in item 407.1610. The rate of duty is 1.7 cents per pound plus 13.6 percent ad valorem but not less than the highest rate applicable to any component material. Depending on the value, a higher rate of duty could be 0.6 cent per pound plus 17.3 percent ad valorem from item 402.3600, TSUSA, based on the alkylbenzene content.

Articles classified under item 407.1610, TSUSA, which are the products of the Republic of Korea are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Ms. Catherine Tsai
Sunnix International, Inc.
P.O. Box 97
Monterey Park, CA 91754

Dear Ms. Tsai:

In your letter of March 5, 1986, you requested a tariff classification on 2 styles of patented athletic footwear with electronic counters which you are planning to import from Taiwan.

Inspection of the first sample submitted with your inquiry, Style NF-31016 "Datatrack", indicates that this is a woman's leather aerobic shoe, approximately 5 inches high, with a plastic padded collar, 6 eyelet U-throat with a leather/velcro tab covering the lacing arrangement and a separate leather/velcro strap with D-ring at the top. This shoe also has a terry/tricot lining, a terry/sponge insole, and the bottom consists of a cemented EVA wedge and a molded rubber/plastic outsole with integral toe and heel bumpers which overlap and are cemented to the upper.

On this aerobic shoe, the leather/velcro tab covering the lace on the right shoe contains a plastic receptacle with a removable solid state electronic counter/watch with a liquid crystal display in a plastic case. This counter/watch would be considered an auxiliary feature that is subsidiary to the shoe and would not be separately classifiable.

Therefore, Style NF31016 is classifiable under the provision for footwear in which leather covers more than 50% of the exterior surface area of the upper; which is in chief value of leather; which is worn by women or misses; and which is valued over $2..50 per pair, in item 700.4505, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 10 percent ad valorem.

The second sample submitted with your inquiry is Style NF21015 "Datapacer," a man's jogging shoe with a nylon mesh upper with smooth leather overlays consisting of the toecap, 7 eyelet U-throat, side sweep, 2 color leather heel counter, and a plastic heel tab. This shoe has a tricot lining, a removable fabric/molded plastic insole, and the bottom consists of a 2 color EVA wedge with a 2 color molded outsole that overlaps the upper slightly at the toe.

C9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

REPLY TO: AREA DIRECTOR OF CUSTOMS, NEW YORK SEAPORT, NEW YORK, NEW YORK 10048

It is also noted that the top of the tongue on this shoe is extended and finished in the shape of a leather tab backed by velcro that closes over the top 3 eyelets. Here again, the shoe for the right foot contains a plastic receptacle with a removable solid state electronic counter/watch with an LCD display in a plastic case. As mentioned previously, this counter/watch would be considered an auxiliary feature of the shoe and would not be separately classifiable.

However, since we do not know whether the chief value on this shoe is the leather or the rubber and plastic components, we can only give you an advisory classification as follows"

If in chief value of leather, classification on this shoe for men and Boys would be under item 700.3522, TSUSA, dutiable at 8.5 percent ad valorem.

If in chief value of rubber and plastic (including the plastic components in the counter/watch), classification for men, youths, and boys would be under item 700.9515, TSUSA, dutiable at 12.5 percent ad valorem.

With respect to style DF31016 "Datatrack", this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)]. For Style DF21015 "Datapasser", this is an information letter issued under the provisions of Section 177.1(d)(2) of the Customs Regulations [19 C.F.R. 177.1(d)(2)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. G. E. Tonkin
Market Entry Section
USA Marketing Division
Department of External Affairs
125 Sussex Drive
Ottawa, Ontario K1A 0G2

Dear Mr. Tonkin:

In your letter dated March 7, 1986, you inquired about the dutiable status of Mexican dip, dill dip and French onion dip from Canada.

Three samples were examined and disposed of. The products are a Mexican dip, dill dip, and French onion dip. The dips are to be imported in a ready-to-use retail can and to be used as a snack in conjunction with crackers, potato chips, vegetables etc.

You have suggested in your letter that the dips be classified under TSUS number 182.46 as sauces: other. This TSUS number however would not apply as a sauce for tariff purposes is a finished food preparation eaten as an addition to and together with a dish of food. It does not apply to an article which is eaten above for its own sake. The dips in question would fall into this latter category.

The dips are classifiable under the provision for edible preparations not specially provided for ... other ... other ... other, in item 183.0520, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 10 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Mantuge

Mr. Laurence F. Mages
Morrie Mages Sports
620 N. LaSalle Street
Chicago, ILL 60610

Dear Mr. Mages:

In your letter of March 6, 1986, you requested a tariff classification on an after-ski boot, product of Italy.

Inspection of the sample submitted with your inquiry indicates that this is a foam backed, non-molded, all plastic boot, approximately 7 1/2 inches high, with a 5 eyelet laced tie at the front, a plastic heel counter, and a synthetic fleece lining throughout. We note that the plastic upper terminates at and is stitched to the top of a plastic strip which looks like a "mudguard" and extends down to the top of the outsole. The sidewalls of the unit molded rubber/plastic bottom overlap the plastic upper on this boot by more than 1/4 inch and this would be considered a foxing-like band for classification purposes.

Therefore, your sample boot is classifiable under the provision for footwear which is over 50% by weight of fiber, rubber, and plastic and over 10% by weight of rubber and plastic; which has a foxing-like band molded at the sole and overlapping the upper; and which is designed to be a protection against water, oil, or cold or inclement weather, in item 700.5700, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 37.5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

St. Louis, Missouri 63141

Dear Ms. Straub:

In your letter of March 19, 1986, you requested a tariff classification on a man's boot which we understand you are planning to import from a Column I country.

Inspection of the unnumbered sample submitted with your inquiry indicates that this is an all molded plastic boot, approximately 10-1/2 inches high, with a synthetic fleece lining throughout the boot.

This boot is classifiable under the provision for footwear which is over 50% by weight of rubber and plastic; in which rubber and plastic cover more than 90% of the exterior surface area of the upper and the sole; which has an upper of molded construction not formed by sewing the parts thereof together and not having exposed on the outer surface a substantial portion of functional stitching; and which is designed to be a protection against water, oil, or cold or inclement weather, in item 700.5320, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 37.5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Miami, FL 33131

Dear Mr. Linet:

In your letter dated March 19, 1986, you inquired on behalf of your client, Chesebrough - Pond, Inc., about the dutiable status of Nutritional Liquid Supplements from Holland.

The prospective import, indicated as Nutritional Liquid Supplements, will be marketed as Fortimel, Fortison PRE, Fortidrink, and Fortical. These Nutritional Liquid Supplements will be available in various flavors and will be imported ready for consumption by the ultimate user.

Component breakdowns indicate that Fortimel, Fortison PRE, and Fortidrink are Nutritional Liquid Supplements in chief value of caseinates. The Fortical supplement is in chief value malto-dextrin.

Fortimel, Fortison PRE, and Fortidrink are classifiable under the provision for other casein mixtures in chief value thereof, in item 493.1700, Tariff Schedules of the United States, and are dutiable at the rate of 0.2 cent (.002) per pound.

Fortical is classifiable under the provision for other beverages, not specially provided for, in item 166.4040, Tariff Schedules of the United States, and dutiable at the rate of 1 cent per gallon.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Ms. Jacqueline P.L.P. Giri
Director
Giri Associates, Inc.
P.O. Box 1734
Elk Grove, IL 60007

Dear Ms. Giri:

In your undated letter, received by this office on March 26, 1986, you inquired about the dutiable status of instant food mixes from India.

Nine products are identified in your letter: Instant Gulab Jamoon Mix, Instant Rasam Mix, Instant Bisibele Bhath Mix, Instant Dosai Mix, Rava Idly Mix, Instant Jilebi Mix, Instant Sambar Masala, Instant Vadai Mix, and Instant Idly Mix. Photocopies of the fronts and backs of the retail sales packages accompanied your letter. Unfortunately, the ingredients listing on Instant Bisibele Bhath Mix, Instant Jilebi Mix, Instant Vadai Mix, and Instant Idly Mix is either illegible or obscured. All products are dry mixes added to water to create either a ready to eat food, or a batter or dough ready for frying or steaming.

Gulab Jamoon mix contains flour, skimmed milk powder, hydrogenated fats, sodium bicarbonate, and tartaric acid. It is mixed with water to form a dough, rolled into balls, fried, and soaked in syrup. Instant Rasam Mix, consisting of turdhall, tamarind, salt, sugar and spices, is added to boiling water and cooked for several minutes. The resulting liquid may be eaten by itself or with rice. Instant Dosai Mix, composed of flour, lentil dal, fenugreek, salt, citric acid, calcium carbonate, and asafoetida, is mixed with water to form a batter and fried like a pancake. Rava Idly Mix contains wheat semolina, hydrogenated fat, salt, cashew nuts, bengal gram dhal, black gram dhal, sodium bicarbonate, mustard, curry leaves, and asafoetida. It is mixed with thick sour curds to form a batter, poured into molds and steamed. Instant Sambar Masala contains spices, salt, bengalgram, blackgram, and curry leaves. It is added to water and cooked for several minutes. The resulting soup-like product may be eaten by itself or used as a gravy over vegetables.

Instant Dosai Mix and Rava Idly Mix are classifiable under the provision for edible preparations not specially provided for ... pancake flour and other flour mixes, in item 183.0100, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 10 percent ad valorem.

D2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Instant Rasam Mix and Instant Sambar Masala are classifiable under the provision for edible preparations not specially provided for ... other, in item 183.0520, TSUSA, and dutiable at the rate of 10 percent ad valorem.

Articles classifiable under items 183.01 and 183.05, TSUS, which are the products of India are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

Articles classifiable in items 183.01 and 183.05, TSUS, containing over 10 percent by dry weight of sugars derived from sugar cane or sugar beets, are currently subject to quota restrictions in items 958.17 and 958.18, TSUS.

However, your inquiry does not provide enough information for us to give a classification ruling on Gulab Jamoon Mix, Instant Bisibele Bhath Mix, Instant Jilebi Mix, Instant Vadai Mix, and Instant Idly Mix. Your request for a classification ruling should include an ingredients breakdown, by weight and value, for each item.

Based upon the information you submitted, Gulab Jamoon Mix, Instant Vadai Mix, Instant Idly Mix, and Instant Jilebi Mix would probably be classified under the provision for pancake flour and other flour mixes, in item 183.0100, TSUSA, with duty at the rate of 10 percent ad valorem.

Instant Bisibele Bhath Mix would probably be classified under the provision for edible preparations not specially provided for ... other, in item 183.0520, TSUSA, dutiable at 10 percent ad valorem.

With respect to Instant Dosai Mix, Rava Idly Mix, Instant Rasam Mix, and Instant Sambar Masala, this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)]. For the balance of the merchandise, this is an information letter issued under the provisions of Section 177.1(d)(2) of the Customs Regulations [19 C.F.R. 177.1(d)(2)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge
Area Director

Mr. Barry Smith
Irving Lang Inc.
7 West 45 Street
New York, N.Y. 10036

Dear Mr. Smith:

In your letter of March 22, 1986, you asked about the dutiable status of gold jewelry from Thailand.

You state that you wish to ship to Thailand raw 10-karat and 14-karat gold castings (ring mountings, pendants, bracelets, etc.) manufactured by you in the United States. In Thailand the raw castings will be filed, cleaned, set with precious stones, polished and returned to the United States for resale.

Ten carat and 14-karat gold jewelry set with precious stones, in chief value of gold, is classifiable under the provision for jewelry and other objects of personal adornment ... in item 740.1400, Tariff Schedules of the United States Annotated (TSUSA). The same 10-karat and 14-karat gold jewelry -- in chief value of the precious stones -- is classifiable in item 740.1500, TSUSA. The rate of duty in either event is 7.2 percent ad valorem.

Jewelry articles classifiable under item numbers 740.1400 or 740.1500, TSUSA, which are products of Thailand, are entitled to duty-free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

To qualify for duty-free treatment under GSP, the imported jewelry -- (1) must be directly shipped from Thailand to the United States, (2) a GSP Certificate of Origin Form A must be filed with the entry, and (3) at least 35% of the appraised value of each individual jewelry article must be attributable to the cost or value of materials produced in Thailand and/or the direct costs of processing operations performed in Thailand.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D4

Under the tariff laws all merchandise imported into the United States is subject to duty unless the specific provision within the Tariff Schedules of the United States permits duty-free or reduced-duty theron. In the event you imported gold jewelry does not qualify for duty-free treatment under GSP, several other special classification provisions warrant consideration.

Part 1 of schedule 8, TSUS, provides for duty-free or reduced-duty treatment on articles exported from the United States and returned. Subpart A thereof concerns articles exported and returned without having been advanced in value or improved in condition while abroad; since the raw castings exported from the United States in your case are advanced in value and improved in condition by virtue of the processing performed in Thailand, the provisions of subpart A do not apply to the jewelry to be imported by you.

Subpart B of part 1, schedule 8, TSUS, permits free entry or a reduction in the duty payable on certain merchandise exported and returned after having been advanced in value or improved in condition while abroad. Item 806.20 thereunder covers articles exported for repairs or alterations; since the processing in Thailand results in new and different articles (completed jewelry articles versus raw castings) and thus constitutes more than repairs or alterations, this provision would not apply in your case. Item 806.30, TSUS, which covers articles of metal (other than precious metal) produced or processed in the United States, exported for further processing, and returned for further processing, would also not apply.

The only provision within subpart B, part 1, schedule 8, TSUS, that might conceivably apply in the present circumstances is item 807.00, TSUS, which refers to articles assembled abroad in whole or in part of components produced in the United States. Although the rate of duty on the imported jewelry is that which applies under its specific classification, e.g., 7.2 percent under item 740.1400, TSUSA, for rings, pendants, and bracelets in chief value of gold, the amount of duty may be reduced by deducting from the appraised value of the imported article the cost or value of the components produced in the United States. Thus, duty is paid only on materials, assembly costs, and other elements reflected in the appraised value which are attributable to a foreign country.

In order to be accorded an allowance under item 807.00, TSUS, the U.S.-made components must be exported in condition ready for assembly and must be subjected only to assembly operations and operations incidental to assembly in the foreign country. Any processing of the U.S. components other than by assembly and operations incidental to assembly, such as further fabrication, prior to or after assembly in the foreign country will disqualify the U.S. components from any allowance under item 807.00. TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

DS

817870

It is understood that the raw castings to be used in the production of the karat gold jewelry in Thailand are produced by you in the United States. However, the filing of those castings and the polishing before and after assembly, represent significant and extensive processing which goes beyond operations incidental to assembly within the meaning of item 807.00, TSUS, and the regulations issued thereunder. Accordingly, the raw castings would not be eligible for a duty exemption under item 807.00.

Of the materials that you may export to Thailand, only the diamonds or other precious or semiprecious stones assembled into the jewelry in Thailand could be subject to an allowance under item 807.00, TSUS. However, you would have to prove that those stones were actually produced in the United States, i.e., by mining and/or cutting from rough stones, rather than merely purchased in the United States.

Based on your letter and your telephone conversation with National Import Specialist Louis Piropato, it appears that the precious stones are of foreign origin, whether supplied by you from the United States, or whether purchased in Thailand. Item 807.00, TSUS, would therefore not apply to the stones in question with the result that the jewelry would be subject to duty on its full value (including the precious stones) upon importation from Thailand.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge
Area Director

Mrs. Vivien Siegel
Promotrim International
P.O. Box 360
Tenafly, NJ 07670

Dear Mrs. Siegel:

In your letter of March 26, 1986, you asked about the dutiable status of certain rhinestones mounted on tape, from Switzerland.

You are inquiring about 12-point rhinestones mounted on positioning transfer tape ("B" tape) in various designs. The rhinestones have a heat-seal backing to enable the user to transfer and heat seal the stones from the tape on to a garment. After transfer to the garment the rhinestones maintain the design or pattern originally found on the positioning tape.

The rhinestones mounted on positioning transfer tape are classifiable under the provision for imitation gemstones (except imitation gemstone beads) in item 741.35, Tariff Schedules of the United States, and are dutiable at the rate of 2.9 percent ad valorem.

The sample has been returned to you.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mrs. Perla Kuhn
Kuhn, Muller and Bazerman
1412 Broadway
New York, NY 10018

Dear Mrs. Kuhn:

In your letter of March 27, 1986, on behalf of Richardson-Vicks Inc., Reference PMK/JSL, you requested the tariff classification of a chocolate flavored beverage powder from Mexico.

An ingredients breakdown, photographs, and sample package labels accompanied your letter and have been retained by this office. The product is a chocolate flavored beverage powder, imported in 14 ounce cans and 25 gram envelopes, bearing the "Pancho Pantera" trademark. It consists of 75.3 percent sugar, 18 percent cocoa, five percent nonfat dry milk, and less than two percent of flavoring, color, and vitamin supplements. You have noted in your letter, and we agree with your conclusion, that the quantity of food ingredients in the product precludes classification as a flavored sugar, in item 155.75, Tariff Schedules of the United States (TSUS).

This merchandise is classifiable under the provision for edible preparations not specially provided for ... other, in item 183.0520, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 10 percent ad valorem. This product will also be subject to quota restrictions in item 958.18, TSUS.

Articles classifiable under item 183.0520, TSUSA, which are the products of Mexico are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge
Area Director
New York Seaport

Ms. Nancy B. Irwin
The Kip Company
1925 Lakeview Avenue
Cleveland, OH 44116-2413

Dear Ms. Irwin:

In your letter dated April 2, 1986, you inquired about the dutiable status of a catalyst from the German Democratic Republic (East Germany).

The catalyst under discussion is referred to as a monometallic reforming catalyst. The catalyst will be produced in the form of a hollow extrusion ring. It consists of platinum on halogen containing aluminum oxide. The catalyst ring will be used in the reforming of naphtha fractions to produce highly knock-proof petrol components and for the recovery of BTX-aromatics.

The platinum is supplied by the customer and is provided in the form of used reforming catalysts, metallic platinum or hexachloroplatinic (IV) acid with a purity of not less than 99.9 percent, referred to platinum. The platinum is the component material in chief value.

The platinum reforming catalyst of East German origin is classifiable under the provision for articles of precious metal, of platinum, in item 656.0500, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 65 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1 (a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If a ruling letter is received after the filing of such documents, it should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Paul L. Meyer
Nik & Associates
P.O. Box 90279
Los Angeles, CA 90009-0279

Dear Mr. Meyer:

In your letter dated April 2, 1986, you inquired about the dutiable status of a "Chair Pack" from Korea.

The "Chair Pack" is a frame backpack that opens into a chair with a backrest. The "Chair Pack" consists of an aluminum frame, foam and fabric backing. The inquiry indicates that the "Chair Pack" is used in camping, fishing, picnicking and other pursuits. In addition, the aluminum is indicated to be the component material in chief value.

"Chair Packs" are classifiable under the provision for articles of aluminum, not coated or plated with precious metal, in item 657.4080, Tariff Schedules of the United States, and dutiable at the rate of 6.2 percent ad valorem.

Articles classifiable under item 657.4080, Tariff Schedules of the United States, which are the products of Korea, are entitled to duty-free treatment under the Generalized System of Preferences (GSP), upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. James W. Hewitt
Alberta Apiary Products Ltd.
P.O. Box 3296
Fort Saskatchewan, Alberta T8L 2T3 Canada

Dear Mr. Hewitt:

In your letter dated March 26, 1986, you inquired about the dutiable status of three products from Canada: pollen royal spread, propolis ointment, and propolis tincture.

The pollen royal spread is composed of 94.8 percent honey, 5 percent pollen, and 0.2 percent royal jelly. The sample which was provided is golden tan in color and flows at room temperature. This product is destined to be used as a table spread in a manner similar to a jam or jelly and is packaged in a wide mouth screw top jar holding 17.6 fluid ounces. Honey is provided for by name as a sugar or syrup under item 155.7000 of the Tariff Schedules of the United States. However, since this product has been adulterated through the addition of substantial non-honey ingredients it is not classifiable under the tariff provision for honey. While this product cannot be considered as honey, pollen royal spread does retain the identity of a sugar or syrup.

Accordingly, pollen royal spread is classifiable under the provision for sugars, syrups, and molasses, described in Schedule 1, Part 10A of the Tariff Schedules, flavored; and syrups, flavored or unflavored consisting of blends of any of the products described in that tariff subpart, other than high fructose syrup derived solely from starches, in item 155.7540, Tariff Schedules of the United States. This product is dutiable at the rate of 7.1 percent ad valorem. Currently, there are no quotas or restrictions on a product such as this since it contains no cane or beet sugar.

Unfortunately, we are not able to venture an opinion regarding the tariff classification of the propolis ointment or propolis tincture based solely on the samples that were provided. In order for a determination to be made on these products you should furnish information regarding the chemical composition of these products in terms of percentages by weight of the finished product and a statement regarding the method of production. Any information or literature regarding the intended end use of these products would also be helpful.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D11

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

REFER TO
CLA-2-07:S:COM:N3G:346
818062

Ms. Ruth Mammone
Morse Shoe International
555 Turnpike Street
Canton, MA 02021

Dear Ms. Mammone:

In your letter of April 4, 1986, you requested a tariff classification on a child's plastic shoe which we understand you are planning to import from Korea or Taiwan.

Inspection of the sample submitted wth your inquiry, Style 64-13920-F50, indicates that this is a child's all plastic aerobic type shoe, oxford height, with a terry/tricot lining, and a terry/sponge insole. The bottom is an EVA wedge midsole with a unit molded outsole with integral toe and heel bumpers which extend onto and are cemented to the upper.

It is noted that the toe bumper on your sample overlaps the upper by more than 1/4 inch and is also stitched to the upper while the heel bumper appears to overlap the upper by approximately 1/8 inch. However, in a ruling published as C.S.D. 83-103, the Customs Service set forth the following criteria:

> "In measuring overlap, when the overlap is uniform, only one cut is to be made in the shoe, and that cut is to be made at the edge where the ball of the foot would normally rest. If the overlap is not uniform, the cut should be made at the point where the greatest amount of overlap occurs."

Since the toe bumper and heel bumper on your shoe take up 70% of the total circumference, we consider this as substantially encircling to qualify as a foxing-like band for classification purposes.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D13

Therefore, your sample, Style 64-13920-F50, is classifiable under the provision for footwear which is over 50% by weight of fiber, rubber, and plastic and over 10% of rubber and plastic; which is not designed to be a protection against water, oil, or cold or inclement weather; which has a foxing-like band almost wholly or rubber or plastic, applied or molded at the sole and overlapping the upper; and which is, we assume, valued for Customs purposes over $3.00 but not over $6.50 per pair, in item 700.6700, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at 37.5 percent ad valorem, plus 90 cents per pair.

In the event this shoe is valued for Customs purposes over $6.50 but not over $12.00 per pair, classification would be under item 700.6900, TSUSA, and dutiable at 20 percent ad valorem, plus 90 cents per pair.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge
Area Director

New Fairfield, CT 06810

Dear Mr. Hart:

Your letter of April 7, 1986 concerns the dutiable status of a mixture of unvulcanized synthetic and natural rubber from Canada. A sample of the product to be imported was submitted for our review.

The test made by our laboratory indicates that the product you intend to import is composed of a mixture of crude synthetic and natural rubbers. The product is classifiable under the provisions for mixtures of natural and synthetic rubbers, in item 446.3000, Tariff Schedules of the United States Annotated. The rate of duty is 0.6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mrs. A. Bachofner
Export Sales
Agrano AG Basel
4009 Basel
Herrengrabenweg 56 Switzerland

Dear Mrs. Bachofner:

In your letters dated April 4, 1986 and May 15, 1986, you inquired about the dutiable status of dough improvers from Switzerland.

Ingredient breakdowns and descriptive literature accompanied your first letter. "Alevante," said to be an improver for puff pastry, is a mixture of corn starch (79.05 percent), mono diglyceride (20 percent), ascorbic acid (.5 percent), citric acid (.25 percent), and amino acid (.2 percent). "Garanta" powder is an improver for special breads, rolls and buns, affecting leavening, volume, structure, taste, and shelf life. It consists of dextrose (33.4 percent), corn starch (30.2 percent), esters of mono and di-glycerides (20 percent), malted barley flour (10 percent), soja flour (3.5 percent), lard, alpha-amylase (one percent each), ascorbic acid (.7 percent), and potassium bromate (.2 percent). "Tourit" powder is an additive for fold-in croissant and danish pastry dough, said to keep the doughs in healthy condition by limiting gluten decomposition, controlling enzymatic reaction and excluding overacidity. Tourit contains wheat starch (51.6 percent) wheat flour, malted barley flour (20 percent each), soja lecithin (6 percent), esters of mono and di-glycerides (1.8 percent), ascorbic acid (.5 percent), and potassium bromate (.1 percent). These three products may also be imported in a concentrated form, to which the carrier agents (dextrose or starch) would be added in the United States. Alevante concentrate differs from the complete product by the absence of mono diglyceride; Garanta concenetrate does not contain dextrose, mono and diglycerides, and lard; Tourit concentrate lacks wheat starch and wheat flour.

Alevante, Garanta Powder, and Tourit Powder, complete or concentrate, are classifiable under the provision for edible preparations not specially provided for ... other, in item 183.0520, Tariff Schedules of the United States Annotated, and dutiable at the rate of 10 percent ad valorem.

Mr. Zane Kouchavlis
San Shoe Trading Corp.
470 Park Avenue South
New York, N.Y. 10016

Dear Mr. Kouchavlis:

In your letter of April 8, 1986, you requested a tariff classification on a plastic athletic shoe you are planning to import from Taiwan.

Inspection of the sample submitted with your inquiry, your Pattern No. TA-386-228, indicates that this is a man's all plastic high top athletic shoe, 10 eyelet U-throat, with padded collar. This shoe also has a white EVA wedge midsole with a unit molded blue outsole with integral toe and heel bumpers which extend onto and are cemented to the upper.

It is noted that the toe bumper on your sample overlaps the upper by more than 1/4 inch and is also stitched to the upper while the heel bumper appears to overlap the upper by approximately 1/8 inch. However, in a ruling published as C.S.D. 83-103, the Customs Service set forth the following criteria:

> "In measuring overlap, when the overlap is uniform, only one cut is to be made in the shoe, and that cut is to be made at the edge where the ball of the foot would normally rest. If the overlap is not uniform, the cut should be made at the point where the greatest amount of overlap occurs."

Since the toe bumper and heel bumper on your shoe take up 66% of the total circumference, we consider this as substantially encircling to qualify as a foxing-like band for classification purposes.

Therefore, your sample, Pattern No. TA-386-228, is classifiable under the provision for footwear which is over 50% by weight of fiber, rubber, and plastic and over 10% rubber and plastic; which is not designed to be a protection against water, oil, or cold or inclement weather; which has a foxing-like band almost wholly of rubber or plastic, applied or molded at the sole and overlapping the upper; and which is, we assume, valued for Customs purposes over $3.00 but not over $6.50 per pair, in item 700.6700, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 37.5 percent ad valorem, plus 90 cents per pair.

Mr. S. Kubo
Sanyei America Corporation
1881 Commerce Drive, Unit 114
Elk Grove Village, Illinois 60007

Dear Mr. Kubo:

Your letter of April 8, 1986 requested this office to rule upon the tariff classification of mittens from Taiwan.

The first sample, style 0772B, is described as a toddler ski mitten. This mitten has a woven shell of man-made fibers, a knit man-made fiber surface on the inside, vinyl reinforcement on the palm and thumb, additional padding across the back of the knuckles with internal vinyl reinforcement, an elasticized wrist, and a hook and clasp.

The second sample, style 4005, is described as an infant ski mitten. This mitten has a woven shell of man-made fibers with pile, man-made fibers on the inside and on the cuff. These mittens do not have thumbs. Each mitten of this pair is joined together by a knit, man-made cord approximately 30 inches long.

Cost breakdowns were submitted that indicated each of the styles is in chief value of man-made fibers.

In the case of Stonewall Trading Company v. United States, 64 Cust. Ct. 482, C. D. 4023 (1970), the Customs Court ruled that certain vinyl gloves are classifiable under the provision for other ski equipment, in item 734.97, TSUS (now item 735.06, TSUS). These gloves were found to have the following characteristics:

1. a hook and clasp to hold the gloves together;

2. an extra piece of vinyl stitched along the thumb portion to meet the stress caused by the flexing of the knuckles when the skier grasps the ski poles;

3. an extra piece of red colored vinyl with padding reinforcement and inside stitching, which is securely stitched across the middle of the glove where the knuckles bend and cause stress;

4. cuffs with an elastic gauntlet to hold the gloves firm around the wrist, so as to be waterproof, and keep it securely on the hand.

EG

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Since the toddler ski mitten, style 0772B, possesses all of the features cited above, this mitten is classifiable under the provision for other ski equipment in item 735.0660, Tariff Schedules of the United States Annotated (TSUSA) and is dutiable at the rate of 5.9 percent ad valorem.

Articles classifiable under item 735.0660, TSUSA, which are the products of Taiwan are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

With respect to the infants mitten, style 4005, however, not only does it lack the additional padding with vinyl reinforcement across the back of the knuckles and a hook and clasp, the absence of a thumb would preclude the infant from grasping a ski pole. The presence of a pile cuff to which snow would cling after a fall would negate any waterproof quality, presumed to be present, of this mitten. Furthermore, the knit cord joining the two mittens is a standard feature of infants and children's winter gloves for warmth. The presence of this feature is indicative of the fact that these mittens are not designed for use in the sport of skiing but are in fact designed as winter gloves for warmth. Finally, infants are physically incapable of engaging in the activity of skiing so mittens of this size can not be considered to be within the meaning of ski equipment. Accordingly, style 4005 is precluded from classification under the provision for other ski equipment in item 735.0660, TSUSA.

Accordingly, the infant's ski mitten, style 4005, is classifiable under the provision for gloves of man-made fibers, not knit — in item 704.9000, TSUSA. The rate of duty is 14 cents per pound plus 15.7 percent ad valorem.

The subject sample mitten falls within textile category designation 631W. As products of Taiwan this merchandise is subject to quota restrictions and visa requirements based upon international textile trade agreements.

Due to the changeable nature of these agreements you are advised to contact you local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

818193

E7

For your information, style 4005 is not legally marked for the purposes of Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304). One of each pair of gloves must be marked with a sewn in label showing the country of origin. Both style 0772B and 4005 are also subject to the marking requirements of the Textile Fiber Products Identification Act of 1958, as amended (15 U.S.C. 70).

Sincerely,

John J. Martuge

Mr. Peter Nesbit
Burton Son & Sanders Ltd.
College Street
Ipswich IP4 1DE England

Dear Mr. Nesbit:

In your letter dated April 10, 1986, you inquired about the dutiable status of a cake decoration product from England.

This particular product is designated by your company as Diamond Dark Vermicelli HF 16 and commonly known as chocolate flavored sprinkles in the United States. The samples that you submitted are dark brown in color and are in the form of small rods approximately one-quarter inch long by one-sixteenth of an inch thick. The stated composition of this product is 69 percent by weight sugar, 16 percent by weight palm oil, 14 percent by weight cocoa powder, with the balance composed of lecithin and gum arabic. The finished product will actually contain 12 percent by weight non-fat solids of the cocoa bean nib.

Diamond dark vermicelli HF 16 are classifiable under the provision for confectioners' coatings and other products (except confectionery) containing by weight not less than 6.8 percent non-fat solids of the cocoa bean nib and not less than 15 percent of vegetable fats other than cocoa butter in item 156.4700, Tariff Schedules of the United States, and dutiable at the rate of 2.5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

14276 23rd Avenue North
Plymouth, MN 55441

Dear Mr. Eckstam:

In your letter of April 15, 1986, you requested the tariff classification of a Scoop-N-Rake Golf Retriever from Taiwan, Hong Kong, Japan, and Korea.

The submitted sample is 39 inches overall including a 33 inch handle. The working end is approximately 6 inches long and consists of a 5 closed, curved tine rake overlaid by a round metal, 2 1/4 inch diameter metal loop. Pulling this loop back toward the handle opens the tines of the rake. The handle has 3 inner tubes so it can telescope out to an overall length of 12 feet. This article is designed to be used by a golfer to retrieve a ball from an otherwise inaccessible area on a golf course during the course of play.

The Scoop-N-Rake Golf Retriever is classifiable under the provision for other golf equipment in item 734.7780, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 5.2 percent ad valorem.

Articles classifiable under item 734.7780, TSUSA, which are the products of Taiwan, Hong Kong, and Korea are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Dear Ms. Minogue-Edlund:

In your letter dated April 17, 1986, you inquired about the dutiable status of cereal from Ireland.

A sample accompanied your letter, was examined and disposed of. The product, called "Irish Farmhouse Muesli," is a mixture of whole toasted oat flakes, whole wheat flakes, whole barley flakes, raisins, chopped dates, sunflower seeds, roasted peanuts and hazelnuts. It will be marketed as a natural food cereal, free of salt, sugar, and additives, that may be served hot or cold.

This product is classifiable under the provision for cereal breakfast foods and similar cereal preparations, by whatever name known, processed further than milling, in item 182.3000, Tariff Schedules of the United States Annotated, and dutiable at the rate of 2.5 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Piedmont, MO 63957

Dear Mr. Zamzow:

Your letter of April 16, 1986 requested this office to rule upon the tariff classification of a lunch tote and a PVC storage bag from Saint Lucia.

The submitted lunch tote is of nylon and measures approximately 5.5 inches by 7.5 inches by 5.25 inches. There is a textile webbing handle strap measuring 8 inches in length and 1 inch in diameter. The articles for food and beverages are inserted into an insulated interior at a side opening which will be covered by overlapping side panels and then secured by overlapping top and bottom velcro flap closures.

One can ascertain Congressional intent through the Tariff Classification Study which reads: "The luggage and handbags covered here may be fitted with bottle, dining, drinking, manicure, sewing, traveling or similar sets of a type used for convenience, while traveling ..." Thus, in the case of Prepac Inc. v. United States, 78 Cust. Ct. 108, C.D. 4694 (1977), the court stated "I. is clear that the intent in enacting this provision was to encompass such travel goods as are primarily used for travel which are utilized for food and beverages." Therefore, this office feels that the lunch tote is primarily for the convenience of the traveler to transport food and beverages during travel.

The lunch tote is classifiable under the provision for luggage, of other textile materials, other, in item 706.4152, Tariff Schedules of the United States. The rate of duty is 20 percent ad valorem.

Tariff item number 706.4152 falls within textile category designation 670. As a product of Saint Lucia this merchandise is not currently subject to quota and visa restrictions based upon international textile trade agreements.

Due to the changeable nature of these agreements you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The PVC bag presented measures 20 inches by 21 inches with a textile coil zipper running along the full width of the top front panel and its sides. The seams are reinforced with PVC edging and stitching. It appears this bag will be utilized for storing bedding items.

The PVC bag is classifiable under the provision for household articles not specially provided for, of rubber or plastics, in item 772.1500, Tariff Schedules of the United States. The rate of duty is 4 percent ad valorem.

Articles classifiable under item 772.1500, TSUS, which are the products of Saint Lucia are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Joseph Eichberg
American Lecithin Company
P.O. Box 4056
Atlanta, GA 30302

Dear Mr. Eichberg:

Your letter of April 15, 1986 concerns the dutiable status of Soy Phosphatide NC 95 and Soy Phosphatide NC 95-H from West Germany. Samples of each product were submitted.

The Customs laboratory has analyzed the two products. The Soy Phosphatide NC 95 (Soybean Phosphatidylcholine) is a refined lecithin, while the Soy Phosphatide NC 95-H (Soybean phosphatidylcholine) is a refined hydrogenated lecithin. These products have diverse uses, including use in the preparation of liposomes for drug delivery and as a solubilizer. These phosphatides are also undergoing investigations with respect to their potential value of phosphatidylcholine in neurological disorders and in cardiovascular disease.

Since these products are not chiefly used as drugs, tariff classification is precluded under the provision for drugs.

Soy Phosphatides NC 95 and NC 95-H are classifiable under the provision for fatty substances of animal or vegetable origin; not sulfonated or sulfated, fatty-acid esters, ethers, and ether-esters of polyhydric alcohols, other, in item 465.1000, Tariff Schedules of the United States Annotated. The rate of duty is 1.1 cents a pound, plus 4.9 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. G.E. Tonkin
Market Entry Section
Department of External Affairs
125 Sussex Drive
Ottawa, Ontario K1A 0G2

Dear Mr. Tonkin:

In your letter dated April 17, 1986, on behalf of Agrinove of Ste. Claire, Quebec, you inquired about the dutiable status of fruit flavored drinks from Canada.

Samples of five different flavors of Jutel brand drinks in individual retail boxes of 200 milliliters were submitted. The flavors consist of apricot, orange, grape, strawberry and kiwi-mango. All have skim milk added. The ingredients in order of weight are water, skim milk, concentrated juice of the particular named fruit (ten percent or less), sugar, dextrose, stabilizers, preservatives, flavorings and colorings.

The component material in chief value is stated to be the sugar or dextrose for the apricot, orange and grape drinks. Strawberry juice is the component material in chief value of the strawberry drink. A breakdown by value is not available for the kiwi-mango drink.

The apricot, orange, grape and strawberry drinks are classifiable under the provision for beverages, not specially provided for, in item 166.4040, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of one cent per gallon.

However, your inquiry does not provide enough information for us to give a classification ruling on the kiwi-mango drink. Your request for a classification ruling should include a component material breakdown by value.

Assuming that the kiwi-mango drink is not in chief value of the skim milk, it would also probably be classified under the provision for beverages, not specially provided for, in item 166.4040, TSUSA, with duty at the rate of one cent per gallon.

Should the composition and value of these products change so that the milk is the component material in chief value, the products would be classified under the provision for articles, not specially provided for of milk or cream, in item 118.3000, TSUSA, with duty at the rate of 17.5 percent

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

REPLY TO: AREA DIRECTOR OF CUSTOMS, NEW YORK SEAPORT, NEW YORK, NEW YORK 10048

ad valorem. In addition, they would then be subject to quota requirements.

With respect to the apricot, orange, grape and strawberry drinks, this is a ruling letter issued under the provisions of Section 177.1(a)(1) of the Customs Regulations (19 C.F.R. 177.1(a)(1)). For the balance of the merchandise, this is an information letter issued under the provisions of Section 177.1(d)(2) of the Customs Regulations (19 C.F.R. 177.1(d)(2)).

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

132 W 132 Street
Los Angeles, CA 90061

Dear Mr. Shaikh:

In your letter dated April 24, 1986, you inquired about the dutiable status of various chemicals from the Peoples Republic of China, Korea and Japan.

The chemicals you requested classification for are listed below:

sodium hexametaphosphate containing by weight not over 45 percent of water of crystalization	421.16	1.4% ad valorem
over 45 percent	421.18	2.6% ad valorem
citric acid	425.74	6.7% ad valorem
sodium hydrosulfite	421.06	17.5% ad valorem
oxalic acid	425.86	3.9% ad valorem
hydrogen peroxide liquid or powder	423.00	3.9% ad valorem
acetic acid	425.70	1.8% ad valorem

Articles classifiable under item 421.16, 421.18, 425.74, 421.06, 425.86, 423.00 and 425.70, TSUS, which are the products of Korea are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Andrew P. Vance
Barnes, Richardson & Colburn
475 Park Avenue South
New York, NY 10016

Dear Mr. Vance:

In your letter of April 30, 1986, you requested the tariff classification of a "Carry-Along Fashion Exercise Mat" from Taiwan. Your inquiry is on behalf of Multi-Toys Corporation, Fort Lee, New Jersey.

The submitted sample is a "Carry-Along Fashion Exercise Mat," style #1367, measuring approximately 34 inches long by 15 inches wide. The mat is in chief value of man-made fiber woven fabric and, when folded, is secured by a zipper closure with two carry straps. On the front of the folded mat is a pocket with the name "L.A. Gear" printed in its center. The mat is contained in a clear plastic carry bag with snap closures.

You believe that the "Carry-Along Fashion Exercise Mat" is classifiable under the provision for other game, sport, gymnastic, athletic, or playground equipment, not specially provided for, in item 735.2058, Tariff Schedules of the United States Annotated (TSUSA). You do not submit any evidence to support this claim, however, nor are any design features apparent in the sample supplied. Since exercise is an athletic activity, none of the other named activities need be considered.

Mats designed for use in exercise have two primary purposes. The first of these is to absorb shock to the bones and joints. Such shock occurs when the user is in an upright position and rapidly transferring weight from one leg to the other. The second purpose is to provide a non-slip surface to ensure the user's stability, whether prone, seated, or upright, that will also prevent skin burns.

Your submitted sample has only 1/2 inch of a very low density, open cell foam that compresses easily. As such, it shows no more than token shock absorbing capability. The woven fabric shell which covers this foam is slick and would not provide the stable surface. Accordingly, the "Carry-Along Fashion Exercise Mat" is not designed for the athletic activity of exercising and is therefore precluded from classification, as such, in item 735.2058, TSUSA.

F6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Accordingly, the "Carry-Along Fashion Exercise Mat," style #1367, is classifiable under the provision for Articles not specially provided for, of textile materials, of man-made fibers, other, in item, 389.6270, TSUSA, and dutiable at the rate of 4 cents per pound plus 10 percent valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. Andrew P. Vance
Barnes, Richardson & Colburn
475 Park Avenue South
New York, NY 10016

Dear Mr. Vance:

In your letter dated April 30, 1986, on behalf of Multi-Toys Corporation, you inquired about the dutiable status of gloves from Taiwan.

The submitted pair of sample gloves, referred to as "Work-Out Gloves", model 1372, are half finger gloves for a child. The gloves have half-pique construction on the tops of the fingers and thumbs while an inseam construction is used for the balance of the gloves. In the center of each palm are 4 air holes. The backs of the hands have cut-away sections closed by 1 1/2" velcro straps. Four round 1/2" diameter holes are also cut out over the knuckles. The gloves are composed of seamed vinyl material, with non-textile fourchettes.

You state that these gloves are designed for gymnastic activity and, therefore, believe that they are properly classifiable under the provision for other sports gloves in item 735.07, TSUS. We do not agree.

For most of the activities performed by gymnasts, no gloves are used; the gymnast merely applies chalk to the hands to prevent them from slipping on the apparatus being used. The sole exception to this procedure is when the gymnast is working on the parallel bars (as one high bar for man; as uneven parallel for women). Gloves designed for working with this apparatus have a rod attached by a strap linking the two center fingers to the wrist. Such articles are not usually gloves themselves since they cover neither the index finger nor the little finger. They do, however, constitute equipment because they greatly enhance the gymnast's grip which results in increased performance in training as well as in the maneuvers performed. Your gloves have no such special design.

While the submitted samples have a sport "look", resembling as they do certain adult gloves for driving automobiles, the tariff requires that gloves be "designed <u>for use</u>" (emphasis added) in sports. Mere imitation sport gloves worn for reasons dictated by fad, fashion, or fancy are not within the meaning of this provision. Accordingly, your claimed classification under the provision for other sport gloves in item 735.07, TSUS, is precluded.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Model 1372 is classifiable under the provision for gloves of rubber or plastics, in item 705.8560, TSUS. The rate of duty is 14.1 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

John J. Martuge

Mr. Harold I. Loring
Grunfeld, Desiderio, Lebowitz & Silverman
2 World Trade Center, Suite 2238
New York, NY 10048-0654

Dear Mr. Loring:

In your letter of May 1, 1986, on behalf of Dynacraft Industries, Inc., you requested the tariff classification of scooter, model no. 8522-10, from Taiwan.

Although no sample was submitted, you enclosed a photograph and technical specifications for this scooter. The front is made from a standard BMX-type T handlebar and front fork. The wheels have 12 inch plastic, 5 arm rims with plastic hubs to which 12 1/2 x 2 1/4 inch tires are mounted. The rear wheel is joined to the stem of the front fork by 2 parallel 1 inch tubes mounted on either side of the rear hub. What appears to be a 12 inch long skateboard is attached to the tubes joining the front and rear wheel. This scooter comes equipped with a right hand lever for a caliper brake on the rear wheel, BMX pads on the handlebar and head stem, and mushroom grips. This scooter is propelled by a child placing one foot on the skateboard while the other foot pushes against the ground.

Accordingly, this scooter, model no. 8522-10 is classifiable under the provision for ... other wheeled goods ... designed to be ridden by children ... other than chain-driven in item 732.5200, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 4.3 percent ad valorem.

Articles classifiable under item 732.5200, TSUSA, which are the products of Taiwan are entitled to duty free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported.

Post Office Box 468
Lake Zurich, Illinois 60047-0468

Dear Mr. Breslow:

Your letter of April 30, 1986 requested this office to rule upon the tariff classification of four kitchen towels from Taiwan.

Two of the provided samples have a white background and measure 15-3/8 by 24-3/8 inches. The other two samples have a cream color background and measure 15-3/8 by 25-1/2 inches. The four towels have various printed Christmas motifs and on each end is the printed logo "Kitchen Towel." The towels are manufactured of 100% cotton terry material and will be imported in various size ranges from 15 by 25 inches to 16 by 27 inches.

The four towels are classifiable under the provision for other furnishings, not ornamented, towels, of cotton, pile or tufted construction, valued over 45 cents each, and valued over $1.45 per pound, in item 366.2420, Tariff Schedules of the United States Annotated (TSUSA). The rate of duty is 11.1 percent ad valorem.

The kitchen towels fall within category designation 369. As a product of Taiwan, this merchandise is presently subject to visa restraints based upon international textile trade agreements.

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

Mr. Robert Reid
Alaska Pro-Chemicals
Box 4-2934
Anchorage, Alaska 99509

Dear Mr. Reid:

In your letter of May 2, 1986, you inquired about the dutiable status of chemically-treated "VAPE" insecticide refill mats from Japan.

The mats in the form of blue cotton fiber tablets (22mm x 35mm x 2.5mm in size) with fragrance are used in a household convector heater and when heated release a vapor that kills mosquitos. The mats are saturated with 5.9 percent of synthetically produced d-cis trans allethrin, 0.25 percent other isomers, and 94.36 percent other ingredients, including 1,4 dibutyl amino anthraquinone, butylated hydroxy toluene and butyl stearate or butyl octadecanoate or stearic acid butyl ester. Refill packages of 30 mats will be imported.

When the d-cis trans allethrin is produced from benzenoid derived acetone, the "Vape" insecticide refill mats would be classified under the provision for benzenoid pesticides, other in item 408.3800, Tariff Schedules of the United States (TSUSA), and dutiable at the rate of 0.8 cent per pound plus 9.7 percent ad valorem.

When the d-cis trans allethrin is produced from non-benzenoid derived acetone, the "Vape" insecticide refill mats are classified under the provision for benzenoid mixtures in item 407.1900, TSUSA, and dutiable at the rate of 1.7 cents per pound plus 13.6 percent ad valorem, but not less than the highest rate applicable to any component material. The component with the highest rate appears to be 1,4 dibutyl amino anthraquinone which is classified in item 405.0700, TSUSA, and dutiable at the rate of 1.7 cents per pound plus 15.6 percent ad valorem.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Mr. David C. Frey
David Frey Inc.
P.O. Box 1401
Tustin, CA 92681

Dear Mr. Frey:

In your letter of April 23, 1986, you requested the tariff classification of a waterski glove, the "Clincher" from Taiwan.

The "Clincher" is a full-fingered glove of synthetic leather with air perforations on the back of the fingers and the front of the fingers and thumb. An inseam construction is used throughout. The back of the hand uses nylon spandex which extends from the hemmed cuff to the knuckle of the index finger on one side to only 2 inches from the hem on the other side. The nylon spandex forms a diagonal line with the synthetic leather across the back of the hand. A piece of synthetic leather reinforcement is placed over the seam extending from the first phalanx of the index finger to the first phalanx of the thumb.

This glove has a 2 inch wide, 1/4 inch thick band of rubber sewn on the front of the wrist. This band is not continuous, but is open at the back of the wrist. A 1 1/2 inch wide nylon web strap with a velcro closure secures both the glove and the rubber band tightly around the wrist. This glove also has another strap of nylon web, 1 7/8 inch wide that joins the two center fingers to the wrist strap. The lengthwise strap pulls the two fingers down into a preset curve. Just below the curved fingertips a piece of rubber rod, 7/16 inch in diameter, is glued into the width of this strap.

This construction is modelled after gymnasts' gloves (for parallel bar routines). Since the fingers are joined to the wrist strap, the waterskier's grasp of the tow bar is not limited by the strength of the fingers. The rod in the lengthwise strap helps secure the tow bar in the skier's hand. The rubber wrist band helps cushion and reinforce the wrist. This construction allows novice waterskiers to progress more rapidly in the sport while advanced skiers can perform more difficult maneuveurs. Accordingly, the cumulation of features of the "Clincher" show design for use in the sport of waterskiing.

The "Clincher" is classifiable under the provision for ... other gloves, not provided for in the foregoing provisions of this subpart, specially designed for use in sports, in item 735.0700, Tariff Schedules of the United States Annotated (TSUSA), and is dutiable at the rate of 5.2 percent ad valorem.

Ms. Trudy van Dinter
Shell Canada Limited
P.O. Box 2100
Oakville, Ontario, Canada L6J 5C7

Dear Ms. van Dinter:

In your letter dated April 17, 1986, you inquired about the dutiable status of 160 Solvent from Canada.

A sample of 160 Solvent, labeled Shellsol D160 was analyzed by the New York Customs Laboratory and found to meet the specification for kerosene.

160 Solvent is classifiable under the provision for kerosene derived from petroleum, shale oil or both (except motor fuel), in item 475.3000, Tariff Schedules of the United States Annotated, and dutiable at the rate of .25 cent per gallon.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling letter should be attached to the entry documents filed at the time this merchandise is imported. If the documents have already been filed, this ruling should be brought to the attention of the Customs officer handling the transaction.

Sincerely,

John J. Martuge

Miss Marsha L. Holthus
Phoenix Group International, Ltd.
1250 South Grove Avenue
Barrington, IL 60010

Dear Miss Holthus:

In your letter of May 1, 1986, you asked about the tariff classification of wood bead seat covers from Taiwan.

A brochure submitted with your inquiry shows automobile seat covers made of wooden beads, 16 mm in diameter. The seat covers are illustrated in numerous solid colors and in designs of various colored beads. The seat covers are long enough to cover seat cushion, seat back and head rest.

The wood bead seat covers are classifiable under the provision for articles not specially provided for, of beads, in item 741.50, Tariff Schedules of the United States, and are dutiable at the rate of 7.3 percent ad valorem.

Articles classifiable under item 741.50, TSUS, which are the products of Taiwan are entitled to duty-free treatment under the Generalized System of Preferences (GSP) upon compliance with all applicable regulations.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

Peter J. Baish
Area Director
New York Seaport

Mr. Herbert T. Posner
Posner and Stedina
630 Third Avenue
New York, NY 10017

Dear Mr. Posner:

In a letter dated May 6, 1986, on behalf of Dan-Dee Imports, Inc., you inquired as to the dutiable status of toy animal figures manufactured in Taiwan and China.

The toy animals, for which samples were provided for our examination, are identified as follows:

Item 5004 - "Picture Frame Bear". The sample represents a stuffed teddy bear made of man-made fibers measuring 4-3/4 inches in height. A circular plastic picture frame is attached to the figure's torso area.

Item 6603 - "Tootsie Footsie". The sample depicts a comical representation of a dog with ten legs. The figure is nine inches high and approximately 12 inches in length. The article is made of man-made fibers and is fully stuffed with polyester filler.

Item 733 - "Bubble Bunch". A comical depiction of a teddy bear, measuring nine inches in height and made of man-made fibers with polyester filler material.

Item 700 - "Busy Body Bear". The sample represents a toy teddy bear measuring 13 inches in height. The figure is made of man-made fibers and is fully stuffed with filler material. In addition to its toy appearance, "Busy Body Bear" contains a chime sound device, a heart shaped mirror, a dial and a twirling barrel attached to its torso.

Item 5002 - "Shaking Musical Dog". The sample depicts a 3-3/4 inch high toy article with a flat base. The shape of this object is imparted by a somewhat circular styrofoam shell covered with man-made fiber material.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

67

ADDRESS: AREA DIRECTOR OF CUSTOMS, NEW YORK SEAPORT, NEW YORK, NEW YORK 10048

The object has ears, facial features and flat felt strips glued onto the object apparently representing arms and legs.

The foregoing toy animals, with the exception of item 5002, are classifiable under the provision for toy figures of animate objects (except dolls), not having a spring mechanism, stuffed, valued not over 10 cents per inch of height, in item 737.28 Tariff Schedules of the United States (TSUS), with duty at the rate of 13.3 percent ad valorem, or, if valued over 10 cents per inch of height, in item 737.30, TSUS, with duty at the rate of 5.9 percent ad valorem

With particular reference to item 700, the "Busy Body Bear" figure with its integrated toy features does not, in our opinion, constitute something more than or other than an animate object for tariff classification purposes.

Item 5002 is classifiable under the provision for other toys, not specially provided for, in item 737.95, TSUS, dutiable at the rate of 8.3 percent ad valorem. We are unable to agree with your suggestion that the "Shaking Musical Dog" is classifiable under the provision for toy figures of animate objects (except dolls), not having a spring mechanism, not stuffed, wholly or almost wholly of metal.

In the case of Louis Marx & Co., Inc. V. United States, 66 Cust. Ct. 139, C.D 4183 (1971), the court stated that "'figures of animate objects' must be read to mean forms or representations of humans or animals". It is our view that a proper interpretation of the phrase "forms or representations" has reference to a reproduction of the appearance of an animate object as a clearly defined configuration in multi-dimensional form and as a full bodied representation of an animate object. Your item does not incorporate a full bodied character and is not configured and detailed to a reasonable degree to depict the overall features of the animal it seeks to represent. Accordingly, item 5002 cannot be considered an animate object for purposes of classification under item 737.35, TSUS.

This ruling is being issued under the provisions of Section 177.1 (a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate Customs officer handling the transaction.

Sincerely,

Peter J. Baish
Area Director

Department of External Affairs
125 Sussex Drive
Ottawa, Ontario Canada K1A 0G2

Dear Mr. Pamerleau:

In your letter dated May 5, 1986, on behalf of Robin Hood Multifoods Inc., Willowdale, Ontario, you inquired about the dutiable status of a gingerbread house kit from Canada.

Samples of a gingerbread mix and an icing mix accompanied your letter. The samples were examined and disposed of. The components of the imported kit will be the two mixes, mint patties, peppermint balls, candy coated milk chocolate, jelly candy, spearmint leaves candy, and roll candy. The gingerbread mix consists of flour, dextrose, vegetable shortening, sugar (9.95 percent by weight), spices, caramel color, and salt. It appears to be a complete mix, requiring only the addition of water or milk prior to mixing and baking. The icing mix is a dry mixture of dextrose and corn syrup solids. The candies are intended to be used as decorations for the gingerbread house.

The gingerbread mix is classifiable under the provision for edible preparations not specially provided for ... pancake flour and other flour mixes ..., in item 183.01, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 10 percent ad valorem.

The icing mix is classifiable under the provision for edible preparations not specially provided for ... other, in item 183.05, TSUS, and dutiable at the rate of 10 percent ad valorem.

The mint patties, peppermint balls, candy coated milk chocolate, jelly candy, spearmint leaves candy, and roll candy are classifiable under the provision for candy, and other confectionery, not specially provided for, in item 157.10, TSUS, and dutiable at the rate of 7 percent ad valorem.

Mr. Young Chu
Imex Industries
3200 Wilshire Boulevard, Suite 601
Los Angeles, CA 90010

Dear Mr. Chu:

In your letter of May 8, 1986, you requested the tariff classification for 3 styles of gloves from Korea. Samples of each style were submitted with your request. You also requested clarification as to what features are required for tariff classification as a ski glove and as a snowmobile glove.

Style MG-0081 is a woven fabric glove of man-made fiber with a leather palm, thumb, fourchettes, and palm and thumb reinforcement. This glove has an interlining of foam rubber and a lining of a knit fabric. This glove also has an additional layer of foam rubber on the back of the hand to which is bonded a very thin layer (approximately 1/16" inch) of insulating material. This compound layer extends from the fingertips to the hem of the cuff. A single row of elastic gathering on the palm side of the wrist and a 1 inch wide, leather strap with a velcro closure that passes through a rectangular ring secures the glove on the back of the wrist. The embroidered letters on the strap are considered to be ornamentation. The fabric gauntlet is approximately 5 inches long measured from the seam at the base of the thumb. The gauntlet's hemmed cuff is elasticized so that it is only about 1/2 inch wider than the wrist of the glove. This glove also has a hook and clasp. An inseam construction is used throughout.

Style MG-0105 is a woven fabric glove, of man-made fiber including the thumb and fourchettes, with leather palm, thumb, and the palm side of the first 2 fingers. These leather areas do not constitute reinforcement because the woven shell is not complete underneath the leather. A piece of suede reinforcement is sewn into the side seam and extends from the top of the second phalanx of the index finger to within 1 1/4 inches above the wrist. This glove has an interlining of foam rubber and a lining of a knit fabric. This glove also has an additional layer of foam rubber on the back of the hand to which is bonded a paper thin layer of insulating material. This compound layer extends from the fingertips to the hem of the flared cuff. A single row of elastic gathering tightens this glove on the palm side of the wrist. The flared fabric gauntlet is approximately 5 inches long measured from the seam at the base of the thumb. A 1 inch wide, suede leather strap with a velcro closure passing through a rectangular ring is sewn into the side seams

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G11

1 1/2 inches from the hem of the gauntlet and tightens this glove on the back of the hand. The applique on the wrist strap is considered to be ornamentation. An inseam construction is used throughout.

Style MG-9229A is a woven fabric glove, including the thumb and fourchettes, with leather palm, thumb, and the palm side of the first 2 fingers. The back of the first 2 fingers is of suede. These leather and suede areas do not constitute reinforcement because the woven shell is not complete underneath the leather. A piece of leather reinforcement is sewn over the side seam and extends from the top of the first phalanx of the index finger to the top of the first phalanx of the thumb. This glove has an interlining of foam rubber and a lining of a knit fabric. The interlining is enclosed within a thin plastic film-like layer which appears to be of the type which is waterproof while allowing sweat to pass through. This glove also has an additional layer of insulating material on the back of the hand which extends from the fingertips to the hem of the flared cuff. A double row of elastic gathering, approximately 3/4 inch apart, tightens this glove on the palm side of the wrist. A single row of elastic gathering tightens the glove on the back of the wrist. The flared fabric gauntlet is approximately 5 1/2 inches long measured from the seam at the base of the thumb. On the back of the gauntlet a closed, center vent is tightened by a 4 1/2 inch long zipper. An inseam construction is used throughout on this glove.

Although you describe your submitted samples as ski gloves and snowmobile gloves, none of the samples are identified as a ski glove nor do any of them appear to be designed for use in ski.

As to the gloves you describe as snowmobile gloves, the U.S. Customs Service recognizes snowmobile racing as a sporting activity equivalent to that of automobile, motorcycle (e.g. motorcross), or bicycle racing. The mere use of a snowmobile, however, is nothing more than a means of transportation. Snowmobiles in the United States have been used increasingly, in recent years, in those areas of the country which receive heavy, continuing snowfall, to replace transportation by special vehicles, skis, snowshoes, and even dog sleds. Gloves designed for use by snowmobilers traversing their own property, seeking local transportation, or even performing rescue work, are not within the meaning of sport gloves for tariff purposes. Only those gloves recognizable as being designed for use in snowmobile racing constitute sport gloves for tariff purposes.

Gloves designed for snowmobile racing have additional bulk for warmth and an extended flared gauntlet. "Additional bulk for warmth" is required due to the fact that snowmobile racing is performed in very cold temperatures, including frequent sub zero degree temperatures, and that cold is generated by the speed of the vehicle which propagates the wind chill factor. Therefore, "additional bulk for warmth" is to be judged in relation to this factor of the sport which

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

818684

G12

should make "specially designed gloves" for snowmobile racing clearly distinguishable from winter gloves worn for warmth.

The extended, flared gauntlet is to ensure that the wind does not enter the rider's sleeve and to enhance aerodynamic performance. Originally, the gauntlets of snowmobile racing gloves extended to the elbow. The U.S. Customs Service also recognizes that gloves which extend half way up the forearm or beyond as having these same design qualities. Consequently, an "extended" gauntlet is determined not merely by its actual length, which will vary from size to size, but by its proportion related to the user.

Snowmobile racing gloves also normally have palm and thumb reinforcement to minimize the wear caused by the hand controls. A hook and clasp is also normally present because it enables the rider to secure the gloves to the jacket when not racing so wearing a less bulky pair of gloves is more practical.

With respect to your questions on specific features and their admissibility, the ruling program is not intended to reply to questions which are essentially hypothetical in nature. Should you have gloves that incorporate these specific features, you should request a ruling on that item.

Based on our examination of your samples, styles MG-0081 and MG-0105 do not have additional bulk for warmth. Futhermore, style MG-0081 does not have a flared gauntlet. In addition, neither style MG-0081 nor MG-0105 has an extended gauntlet in proportion to the user. Accordingly, they do not show design for use in the sport of snowmobile racing and are not, therefore, classifiable as sport gloves.

On the other hand, we consider the cumulation of features on style MG-9229A to show design for use in the sport of snowmobile racing. Style MG-9229A, then, is classifiable under the provision for ... other gloves, not provided for in the foregoing provisions of this subpart, specially designed for use in sports, in item 735.0700, Tariff Schedules of the United States Annotated (TSUSA) and is dutiable at the rate of 5.2 percent ad valorem.

Styles MG-0081 and MG-0105 are classifiable under the provision for ... other gloves, ornamented: of man-made fibers in item 704.3210, TSUSA, and are dutiable at the rate of 21.7 percent ad valorem.

Styles MG-0081 and MG-0105 fall within the textile category designation 631-W. As a product of Korea, this merchandise is subject to quota restraints and visa requirements based upon international textile agreements.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

818684

G13

Due to the changeable nature of these agreements, you are advised to contact your local Customs office prior to importation of this merchandise to determine the current status of any import restraints or requirements.

This ruling is being issued under the provisions of Section 177.1(a)(1) of the Customs Regulations [19 C.F.R. 177.1(a)(1)].

A copy of this ruling should be attached to the entry documents filed at the time this merchandise is imported. If the entry documents have already been filed, this ruling should be brought to the attention of the appropriate customs officer handling the transaction.

Sincerely,

John J. Martuge

[redacted]

Dear [redacted]

This is in reference to our letter MFG 431.51 WR of June 6, 1972, regarding the classification of a T-4000 TV fitting from Taiwan. The fitting appears to be a transformer which matches the apparent apposition in an electrical circuit to the flow of alternating current from the antenna to the television set. In our letter we advised you that the device would be classifiable under the provision for television apparatus and parts thereof, in item 685.20, Tariff Schedules of the United States (TSUS).

Subsequent to our letter, we learned that the Court of Customs and Patent Appeals in the recent case of United States v. Ampex Corp., Air Express International Corp., et al., C.A.D. 1054, reversed the holding of the Customs Court, and held that a television camera cable was properly classifiable as an insulated electrical conductor rather than as television apparatus despite the fact that the cable was limited to low power applications. Accordingly, in applying the principle of this case to this merchandise, it is our position that the transformer is properly classifiable under the provision for transformers rated at less than one kilovolt ampere, in item 682.05, TSUS, with duty at the rate of 12-1/2 percent ad valorem.

Sincerely yours,

(Sgd.) [illegible] S. [illegible]flin

[illegible] Director
Division of
Classification and Value

[redacted]

Dear [redacted]

This is in reply to your letter of May 22, 1973, regarding the classification of scrap and filler tobacco.

You refer to an apparent difference in Customs' rulings regarding the classification of such tobacco. As you correctly note, in 1963 (Bureau letter 467.44 O, dated August 8, 1963) we ruled that stemmed half leaves of tobacco torn into smaller pieces so that the leaves become unusable for long filler are classifiable as scrap tobacco. In 1965 (Bureau letter 467.4 K, dated April 14, 1965) the Bureau of Customs ruled that small fragments of tobacco leaf of varying widths, not exceeding 4 inches in length, are classifiable as scrap tobacco, in item 170.60, TSUS.

We see no inconsistancy in these two rulings. Although the 1965 ruling was more specific in its description of the merchandise there was no intent to limit the classification of scrap to fragments of tobacco leaf under 4 inches in length. The Bureau of Customs has consistently ruled that in determining whether tobacco is classifiable as stemmed tobacco or as scrap, each shipment must be considered in the condition in which it is imported.

Accordingly, half leaves which are torn into two or three pieces which exceed 4 inches in length may be classified as scrap. However, half leaves which are torn into two or three pieces which exceed 4 inches in length and are usable as long filler are classifiable as stemmed filler in item 170.45, TSUS.

Sincerely yours,

[redacted]

OCT 21 1974

Tariff Classification

Micropaque

OCT 21 1974

DEPARTMENT OF THE TREASURY
OFFICE OF THE COMMISSIONER OF CUSTOMS,
Washington, D. C.,

033344

A notice was published in the Federal Register of August 7, 1974 (39 F. R. 28448) that the United States Customs Service was reviewing the existing uniform and established practice of classifying Micropaque, a barium sulfate product used in obtaining roentgenograms, which contains a benzenoid sweetener, under the provision for other drugs, including synthetic drugs, in item 439.50, Tariff Schedules of the United States (TSUS).

On review of all the evidence submitted, and in the light of Headnote 1, Part 1C, Schedule 4, TSUS, defining benzenoid chemical products, the Customs Service is of the opinion that Micropaque is classifiable under the provision for mixtures in whole or in part of any of the (benzenoid) products provided for in this subpart (c), in item 409.00, TSUS.

Since this ruling will result in the assessment of duties at a rate higher than that previously assessed on Micropaque, the higher rate will be applied only to such merchandise as may be entered, or withdrawn from warehouse, for consumption after the expiration of 90 days after the date of the publication of this notice in the weekly Customs Bulletin.

(Signed) VERNON D. ACREE
Commissioner of Customs

RE: Section 27.37 C.M. Re: I.A. # 159-75

SUBJECT: INTERNAL ADVICE: Advance copy of Headquarters Reply

DEC 22 1975

TO : Regional Commissioners and District Directors

DATE: SEP 09 1975
CLA-2:R:CV:MC
FILE: 041257 CM

DA1 257

TO : Mr. Donald L. Eide
District Director of Customs
Seattle, Washington 98104

FROM : Director, Classification and Value Division R:CV

SUBJECT This is in response to your request for internal advice as to the tariff status of a product which has been sweetened with honey and containing no sugar. IA 159/75

The request was initiated by [redacted] on behalf of its client, [redacted], in a letter dated April 14, 1975, and concerns merchandise entered at the Customs port of Blaine.

The issue is whether a product identified as "Sweet Munchy" containing carrot powder, peanut butter, wheat flakes, and sunflower and sesame seeds, and honey is considered a confectionery for the purpose of classifying it under the provision for confectionery, not specially provided for, in item 157.10, Tariff Schedules of the United States (TSUS).

Headnote 2, Subpart C, Part 10, Schedule 1, described the term "confectionery," as used in this subpart, as covering confections or sweetmeats ready for consumption.

There are many court cases dealing with the question of whether or not a product is a confectionery. The latest, Leaf Brands, Inc. v. United States (C.D. 4409) lists the various products held to be "confectionery" within the meaning of the tariff statutes. Included here an article which contained flour, treacle, glucose, gelatine and caramel; another contained millet seeds, sesame seeds, and sugar; rock candy was noted to be used by some persons as a home remedy. One administrative decision classified as a confectionery, a product which consisted of sesame seeds, sugar, glucose, cocoa butter and honey. The test according to C. D. 4409 "for classification of an article as confectionery is as its use as a confection..." It is not believed that because a particular product is marketed as a health food and sold in health food stores it can not

(OVER)

A6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

be considered a confectionery. It is believed that many products containing ingredients similar to the one in issue are readily recognized as a confectionery or candy; furthermore it is not believed that much reliance can be placed on its description as a food supplement. It is quite common for candy bars to be described as sources of quick energy.

Accordingly, based on the criterion set forth in C. D. 4409, it is believed that the product under consideration is classifiable under the provision for candy, and other confectionery, not specially provided for, in item 157.10, TSUS.

A copy of this decision may be provided the inquirer.

[redacted]

Dear [redacted]

This is in reply to your letter of May 4, 1979, in which you requested information concerning the tariff status of a laxative product, manufactured in France, to be imported through the port of Philadelphia.

Preliminary review of your inquiry reveals that information required by Section 177.2(b)(5), Customs Regulations, was not incorporated into your request for a binding ruling on merchandise which is the subject of a prospective ruling.

Section 177.2(b)(5), Customs Regulations requires that a request for a ruling on merchandise which is the subject of a prospective transaction include a statement that: 1) to your knowledge, the same or identical merchandise is not currently and has not been considered by any Customs office; 2) to your knowledge, the issues involved are not currently being and have not been considered by any court or court of appeal with Customs jurisdiction; and 3) if applicable, the subject transaction is not but one of a series of similar and related transactions.

Accordingly, we are precluded from substantive consideration of your request at this time and we are returning your letter for consideration of these factors and appropriate action.

If, after your review of this information and the facts of the particular transaction involved, you determine that the transaction is indeed prospective in nature and resubmit your inquiry, together with the required statement, we will provide you with a substantive ruling as expeditiously as is possible.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A8

45114

We would note, however, that, if the merchandise is due for arrival immediately or in a relatively short time, it may be to your benefit to avail yourself of the internal advice procedures rather than those applicable to prospective rulings.

Although, at this time, we are unable to provide you with the binding ruling which you request, the laxative, which you state is constituted of coated senna natural extract, syrupy extract of tamarinds, a flavoring of United States origin, prune and apple concentrates, citric acid, potassium sorbate, sucrose, and water, the final product being 66 percent dry extract, is probably classifiable under the provision for other nonbenzenoid drugs in item 439.50, Tariff Schedules of the United States (TSUS), dutiable as a product of France at the reduced column 1 rate of duty of 5 percent ad valorem.

We note that this constitutes an advisory ruling only and is not one which the Customs Service is bound to follow absent prior notice to you.

Sincerely,

(Signed) James W. O'Neil

Dear [redacted]

Your letter of September 3, 1979, requested that we issue a binding ruling concerning the tariff status of 'Seatone' from New Zealand, which was the subject of our letter of August 27, 1979. The product is described as a pure derivative of the green lipped mussel. It is packaged in capsule form. Each capsule is said to contain various minerals, amino acids and vitamins.

A product of this description is classifiable under the provision for other drugs in capsule form in item 440.00, TSUS. The rate of duty is 5 percent ad valorem.

Sincerely,

(Signed) S. P. SCHLEFLIN

Salvatore E. Caramagno

064081

The decision involves the classification of a cerebral vasodilator from West Germany.

FACTS:

The product is described as isopropyl-2-methoxyethyl 1, 4-dihydro-2, 6-dimethyl-4-(3-nitrophenyl)-3, 5-pyridine dicarboxylate.

LAW AND ANALYSIS:

Item 439.50, Tariff Schedules of the United States (TSUS), covers other, including synthetic, nonbenzenoid drugs. Item 407.85, TSUS, covers other products suitable for medicinal use and drugs, which are obtained, derived, or manufactured in whole or in part from a benzenoid source. Since this product is in part benzenoid it would be classified in item 407.85, TSUS.

HOLDING:

Isopropyl-2-methoxyethyl 1, 4-dihydro-2, 6-dimethyl-4-(3-nitrophenyl)-3, 5-pyridine dicarboxylate is classifiable under the provision for other benzenoid drugs in item 407.85, TSUS, The rate of duty is 1.7 cents perppound plus 12.5 percent ad valorem.

Dear [redacted]

Your recent letter concerns the dutiable status Tiger Bone Tincture from People's Republic of China.

The product is a preparation of herbs and natural drugs. It is said to contain, among other things, Tiger Bone, Rhinoceros Horns, Chi Snake Meat, Musk, Ginseng Root, Antler, Scorpion, Silk Worms, etc.

It is said to be good for various types of rheumatism, headache, stomach ache, general anemia, boils, etc.

A product of this type is classifiable under the provision for non-benzenoid drugs in item 439.50, TSUS, dutiable at 3.7 percent ad valorem. If the product is imported in dosage form it is classifiable in item 440.00, TSUS, dutiable at 4.8 percent ad valorem.

However, it is noted that some of the ingredients listed are made from animals on the endangered species list and their presence may cause the tonic to be a prohibited importation. It is suggested that you submit a copy of the ingredients of Tiger Bone Tincture to -

Director, U. S. Fish and Wildlife Service
Department of the Interior
Washington, D.C. 20240

Also this product is subject to the regulations of the Food and Drug Administration. Therefore, it is suggested that you contact the Food and Drug Administration, 1521 W. Pico Blvd., Los Angeles, California 90015.

Sincerely,

[redacted]

[redacted]

Dear [redacted]

In your letter of October 22, 1980, you question the classification of phenylpropanolamine HCL (PPA) under the provision for other autonomic drugs in item 412.02, TSUS.

You quote from Remington Pharmaceutical Sciences on PPA to the effect that it is indirectly sympathomimetic drug, but that its principal uses are as a nasal decongestant in hay fever and a bronchodilator and decongestant in asthma. You note that Oxymetazoline HCL, a widely used and specific nasal decongestant, is classified under the provision for other imidazoline derivatives in item 411.08, although it is listed by Remington as a sympathomimetic drug. You feel that PPA is listed only as a convenience in item 412.02 and should be classified to reflect its use and relationship to other drugs.

Remington states that autonomic drugs are classified according to the chemical mediator that they either mimic or block. The Pharmaceutical Basics of Therapeutics lists PPA under the heading for important sympathomimetic drugs.

Merchandise, under the tariff law, is classified under the most specific provision of the tariff which applies. PPA, as a sympathomimetic, is most specifically provided for under the provision for other autonomic drugs in item 412.02, TSUS. Similarly, oxymetazoline HCL as an imidazoline derivative is most specifically provided for under the provision for other imidazoline derivatives in item 411.08.

In your other letter of the same date, you inquire why the base and hydrochloride forms of diphenydramine are classified under two different item numbers - 411.52 and 411.56. Under the new benzenoid schedules, which went into effect in July 1980, certain chemicals classifiable in "basket" provisions were classifiable according to whether or not they were considered competitive

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A13

065508

on a certain date: January 1, 1978, for imports and May 1, 1978, for those produced in the United States. The base is provided for eo nomine in item 411.52, but not the hydrochloride form. (You will note that an HCL form of another drug is classified in item 411.52 but not the base form). However, since the hydrochloride is provided for in the chemical appendix to the tariff it is correctly classifiable in item 411.56, TSUS.

Sincerely,

[redacted]

Dear [redacted]

Your letter of August 15, 1980, concerns the dutiable status of Chenodeoxycholic Acid.

The product is said to be made from animal bile acid and it is used as a gallstone solubilizer. It is added that it will be offered in both bulk and capsule form.

In its bulk form the product is classifiable under the provision for other drugs, including synthetic drugs, in item 439.50, Tariff Schedules of the United States (TSUS). The rate of duty is 3.7 percent ad valorem. If packaged in capsule form it is classifiable in item 440.00, TSUS, for products imported in capsules, lozenges, or similar forms, dutiable at 4.8 percent ad valorem.

Sincerely,

[redacted]

Dear [redacted]

In your letter of September 30, 1980, you question the inclusion of phenylpropanolamine hydrochloride in the provision for other autonomic drugs in item 412.02, TSUS. You state that its major use is as an anorectic drug and that it has a large secondary use in cold and cough remedies. You believe that its autonomic use is rare. You note that at first you were advised that the drug was classified as one of the autonomic drugs in item 411.98, TSUS.

Imports are classifiable in the tariff schedules in the tariff provision which most specifically describes them. Since phenylpropanolamine hydrochloride is not one of the drugs listed in item 411.98 or as one of the hormones, synthetic substitutes, and antagonists listed in item 412.42, it can not be classifiable in either one of those provisions.

It is understood that phenylpropanolamine is listed in Remington Pharmaceutiscal Sciences as a sympathomimetic, and in the Pharmaceutical Basics of Therapeutics as an important sympathomimetic. Accordingly, for classification purposes it appears that the provision for autonomic drug is the most specific; furthermore, as it is listed in the chemical abstract series in the tariff index, it is most specifieally provided for in item 412.02, TSUS.

Sincerely,

(Signed) Arthur P. Schifflin

Dear [redacted]

In your letter of April 8, 1981, you request information regarding the possible application of the provisions of item 854.10, Tariff Schedules of the United States (TSUS), to a data processor system known as the "GE RT/Plan".

You describe this apparatus as a data processor which is employed with cobalt-60 radiation therapy equipment using a radioactive substance for cancer treatment. It assists in treatment planning which is an essential part of the therapy process. It accepts patient information and planned dosage and calculates the potential effect of the projected radiation.

As you are aware, the free entry provision in item 854.10, TSUS, only covers apparatus utilizing radioactive substances for certain purposes and parts or accessories therefor. On the basis of the information before us, it appears that the instant data processor is utilized with qualified apparatus but is not actually a part or accessory of such apparatus.

In view of the foregoing, we are of the opinion that the subject data processor is not entitled to the free entry treatment accorded under item 854.10, TSUS.

Sincerely,

(Signed) R. X. ARNOLD

U.S. CUSTOMS SERVICE
WASHINGTON

JUL 28 1982

REFER TO
CLA-2:CO:R:CV:S
067888 EM

Dear [redacted]

In your letter of July 12, 1982, you inquire concerning the application of item 806.20, Tariff Schedules of the United States (TSUS), to certain stainless steel wire processed abroad.

You state that the merchandise consists of 42,000 pounds of stainless steel wire which was imported from Sweden for use in the manufacture of surgical needles. However, microscopic cracks were discovered so your client intends to return the spools of wire to the manufacturer. The wire when abroad will be unspooled, passed through an eddy current tester, and cracked portions will be removed before the lengths are respooled onto separate spools. The spools of remaining wire will be reimported into the United States.

We are of the opinion that the processing operations performed abroad on the subject wire constitute alterations which qualify it for tariff treatment under item 806.20, TSUS, upon compliance with the Customs Regulations.

Sincerely,

Russell Arnold
Chief, Special
Classification Branch

069704 JH

Dear [redacted]

Your letter of February 4, 1982, concerns the classification of Ritrodrine HCL made in Holland.

You state that subsequent to July 1981, the chemical was classified first in item 412.68, Tariff Schedules of the United States (TSUS), the provision for other drugs, and then later it was classified in item 412.02, the provision for other autonomic drugs.

You suggest that it should be classified in item 411.98 the provision for autonomic drugs. You believe that the classification applies because of the (1) chemical similarity of Ritrodrine and the chemicals listed by name in that item number, and (2) the pharmacological similarity. As with one of the drugs listed there, Ritrodrine is said to be indicated for the treatment of premature labor. You request that it be added by name to those drugs listed in item 411.98, TSUS.

Only the drugs listed by name in item 411.98 may be classified in that provision. As an administrative agency, Customs has no authority to create new item numbers. It is suggested that you write to the Special Trade Representative, 1600 17th Street NW., Washington, D.C. 20506, for information on how a product may be listed by name in the tariff schedules.

However, until such time as Ritrodrine HCL is listed by name, it would be classified, as it is an autonomic drug with a chemical abstract service register number, in item 412.02, TSUS, since it is deemed to be competitive.

Sincerely,

(Signed) Arthur P. Schifflin

Dear [redacted]

This is in reference to your letter, undated, in which you make inquiry into the dutiable status of a sheepskin boot which you intend to import into the United States from Australia. A sample boot (right side) was submitted with your inquiry.

The merchandise is a mid-calf sheepskin boot with an ethylene vinyl acetate (EVA) sole. The exterior surface area of the sheepskin upper displays the tanned side out and would therefore, for purposes of tariff classification, be considered leather footwear.

If the boot is in chief value of the leather upper, it would be classifiable under the provision for footwear, of leather, in items 700.35, 700.43 or 700.45, Tariff Schedules of the United States (TSUS), copy enclosed. Column one duty rates apply to products of Australia. If the boot is in chief value of the rubber or plastic sole and heel, classification would be under the provision for other footwear in item 700.95, TSUS, with duty at the rate of 12.5 percent ad valorem.

Sincerely,

Arthur P. Schifflin
Chief
General Classification Branch

071072 EM

Dear

In your letter of November 23, 1982, on behalf of _____ you asked about the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to certain garment travel bags assembled in Mexico from components of United States origin.

Sample component parts making up the travel bags were submitted. A sample unfinished bag was also submitted, showing a wide aluminum strip at the top and a center narrow strip lined with fabric, both assembled to the bag. The components consist of wide (2-1/2 in.) aluminum strip exported in lengths of 60-1/2 inches and narrow (1-1/4 in.) strip exported in lengths of 48 inches. The narrow strip will eventually be assembled into the middle of the bag where the bag will be folded in half for carrying either by a handle or a shoulder strap connected to assembled "D" rings.

The foreign operations will consist of first cutting the wide strip to proper length with angular ends and punching a series of holes all in one operation, and bending the strip at both ends to a 90-degree angle for attachment to the bag. The holes serve to attach metal brackets for a carrying strap and a metal hook for hanging the bag in a closet or elsewhere. Both ends of the cut strip will be dipped in wax to conceal the rough metal ends and prevent tearing of the garment contents.

The narrow strip is similarly cut to length with a rounded oval shape formed on each end, and holes are punched along the cut length for attachment of the handle and "D" rings for the shoulder strap.

With respect to a foreign assembly, item 807.00, TSUS, provides for the assembly of an article from components that are exported in condition ready for assembly without further fabrication.

In support of the claim that the foreign operations on both aluminum strips are incidental to assembly of the garment bag under item 807.00, TSUS, you compare these operations with the buttonholing and pocket slitting operations performed in the Mast and Oxford Industries cases, Slip Op. 81-18 and 81-21, respectively. Although cutting the exported strip material to proper length and drilling accommodation holes therein may be considered necessary and incidental to assembly on the basis of previous adjudications, as in buttonholing and pocket slitting operations, the described forming and shaping operations, however, are extended operations

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

[redacted] B7

that prepare the cut strips for assembly. In this respect, the described aluminum strips are exported in an unfinished state and, aside from cutting to length and drilling necessary holes, were at that point not capable of immediately entering into the assembly process without still further fabrications of cutting angular and oval ends and bending the wider strip to 90-degree turns. These further operations were needed in order to place the strips in condition ready for assembly. The bending and precise shaping of the exported strips created something new over and above the cutting and drilling, which then made the strips a complete, finished, and usable component.

From this point of view, we believe that the forming of the ends of both strips can appropriately be characterized as a finishing operation which must be performed before the strips can be considered a fabricated component and ready for assembly. The forming and shaping produce a new configuration that did not exist before and cannot be considered incidental to assembly.

Sincerely,

(Signed) R. X. ARNOLD

[redacted]

Dear [redacted]

We have your letter of February 25, 1983, on behalf of [redacted] in which you request a reconsideration of the tariff status of parts or accessories of a High Linear Energy Transfer [redacted] for the University of Washington, the subject of our letter dated April 4, 1980. You state that [redacted] is affiliated with [redacted] the manufacturer of the merchandise in question.

The Neutron Therapy System consists of several systems and subsystems as follows:

1. Cyclotron and power supplies.
2. Beam Transport System.
3. Isocentric therapy unit with treatment head and couch.
4. Fixed beam therapy with treatment head and couch.
5. Control System

Information before the U.S. Customs Service Headquarters indicates that the [redacted] is intended for use in a clinical Neutron Therapy Program in order to evaluate the efficiency of fast neutron and conventional x-ray radiotherapy in the control of malignant tumors.

You indicate that in its pristine state, before use of any kind, the Scanditronix apparatus does not contain any significant radioactive substances. During its use, however, and after the commencement of its first use to produce high energy neutrons, the apparatus indeed does always thereafter utilize radioactive substances of various types.

It is your view that the subject merchandise should be considered as an apparatus and parts or accessories of an apparatus to be utilized in medical diagnosis or therapeutic treatment by a nonprofit organization and accorded free entry under item 854.10, Tariff Schedules of the United States (TSUS).

071206

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

[redacted]
39

In C.I.E. 1385/61 we concluded that a "scintigraph whole body scanner" was classifiable under paragraph 1825, Tariff Act of 1930, as amended, the predecessor of item 854.10, TSUS. There the scintigraph did not contain radioactive material, but it utilized radioactive isotopes which had been administered to the patient.

The nuclear collision which is created when the Scanditronix apparatus employs one of its "MC series cyclotrons" to accelerate positive ions (e.g., 48 Mc V protons) seems to enable the apparatus to utilize neutrons in the performance of its diagnostic and medical functions. As these positive ions are guided into a collision with the target material, which is made primarily with beryllium, they provide gamma radiation and high energy neutrons.

Accordingly, in the absence of additional information that the subject merchandise does not contain radioactive material within the apparatus, we are of the opinion that the merchandise described is of the type provided for in item 854.10, TSUS. However, to obtain free entry under item 854.10, TSUS, it must be established to the satisfaction of the district director of Customs that the article was imported on behalf of a nonprofit institution. That is, it must be established that the importer, or his agent, imports the apparatus on behalf of the nonprofit institution, and not independently or as agent of the foreign manufacturer or for a dealer who would find a qualifying purchaser after importation. Our letter of April 4, 1980, to Nucletronix involving this merchandise should be modified accordingly.

Sincerely,

(Signed) J. T. Roth

071288 EM

071288

[redacted]

Dear [redacted]

In your letter of April 15, 1983, on behalf of [redacted] you asked for information about the tariff status of quartz cane (rod) and tubing that are exported to Mexico in long lengths and cut to shorter lengths.

A narrative description and accompanying photographs showing the cutting process were submitted. It is explained that quartz cane (solid glass rod) about 1/8 or 1/4 inch in diameter will be exported to Mexico in material lengths of 4 feet and cut to shorter pieces ranging from 1/2 to 12 inches long. The cut rod will be used in further assembly operations in Mexico and then returned to the United States in an assembled condition.

On the other hand, hollow quartz tubing will also be exported to Mexico in similar long lengths and cut to smaller lengths while in Mexico. However, instead of being further assembled in Mexico, the cut tubing will be returned for use in the manufacture of halogen lamps either in the United States or Puerto Rico. The photographs submitted show, in addition to the cutting processes involved, the final steps of cleaning, drying, and inspection and packing for return shipment.

With respect to the quartz solid cane or rod, item 807.00, Tariff Schedules of the United States (TSUS), applies to fabricated United States components that are designed to be fitted with other components in an assembly process with no further fabrications performed thereon except for the assembly and operations incidental thereto.

Cutting glass rods to length to facilitate the foreign assembly, as well as other operations of cleaning and drying, are all considered assembly steps or operations incidental thereto, within the meaning of item 807.00, TSUS. Duty is assessed on the value of the imported subassemblies, with allowances from the appraised value for the value of the exported quartz cane.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

[redacted]
311

071288

With respect to glass tubing that is exported for cutting to shorter lengths and returned, however, item 806.20, TSUS, mentioned in your letter as an appropriate classification, provides for an import duty to be assessed on the value of repairs or alterations made on articles exported for that purpose. However, repairs and alterations are made to completed articles and do not include intermediate or finish processing operations that are performed in the preparation or manufacture of finished articles. Or, as further established, when a foreign processing creates a new article of commerce, ready for its intended use, the processing is not considered an alteration. See Guardian Industries Corp. v. United States, Slip Op. 82-4 (1982), and cases cited therein.

Accordingly, in these circumstances, the foreign cutting to length of the quartz tubing cannot be considered to fall under the repair or alteration provision of item 806.20, TSUS.

With respect to classification, since an article is classifiable in that provision of the tariff schedules which most specifically describes it, the merchandise represented by the cut pieces of glass tubing shown in the photographs, is classifiable under the provision for glass tubes and tubing, not processed, according to the silica content; if over 95 percent silica by weight, item 540.41, TSUS; if not, item 540.43, TSUS.

Your question relating to country of origin marking will be the subject of a later letter from the Licensing and Restricted Merchandise Branch of the Customs Service.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

JUL 11 1983

Dear [redacted]

Your letter dated December 16, 1982, requesting the dutiable status of certain footwear produced in China or Japan has been forwarded to us by our New York office for a direct reply to you.

The sample submitted designated as a "Reef Walker" is a felt soled shoe with a knit sock upper attached to the sole. It is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics.

It is your view that the appropriate classification for this type of footwear would be under items 700.51 and 700.52, Tariff Schedules of the United States (TSUS), as protective against water, or under item 700.32, TSUS, as slippers.

The physical characteristics of the sample footwear alone preclude its classification under the provisions of the tariff schedules suggested by you. Classification under item 700.32, TSUS, requires that the footwear be in chief value of leather. Classification under items 700.51 or 700.52, TSUS, requires that the footwear have soles and uppers of which over 90 percent of the exterior area is rubber or plastics.

Item 700.57, TSUS, provides for hunting boots, galoshes, rainwear and other footwear designed to be worn over or in lieu of other footwear as a protection against water, oil, grease or chemicals or cold or inclement weather. The applicable rate of duty is 37.5 percent ad valorem.

Classification of this footwear under item 700.57, TSUS, is precluded because it is not protective against water. Specifically, as used in shallow water at the shore, it will not keep your feet dry due to the unlined knit sock and upper. The felt sole feature of this footwear is to get better adhesion on wet rocks and the vulcanized construction keeps the shoe from falling apart due to continued immersion in salt water.

[redacted]

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Item 700.59, TSUS, provides for footwear of the slip-on type, that is held to the foot without the use of laces or buckles or other fastners, the foregoing except footwear provided for in item 700.57 and except footwear having a foxing or foxing-like band wholly or almost wholly of rubber or plastics applied or molded at the sole and overlapping the upper. The applicable column 1 rate of duty is 37.5 percent ad valorem.

The instant sample is precluded from classification under item 700.59, TSUS, because it has an obvious foxing or foxing-like band wholly or almost wholly of rubber or plastics applied at the sole which overlaps the upper. The presence of a foxing or foxing-like band also precludes its classification under items 700.61 through 700.63, TSUS. Consequently, the sample is dutiable according to value per pair under items 700.64 through 700.71, TSUS, copy attached. The column 1 rates of duty are applicable to products of China and Japan.

Sincerely,

(Signed) A. P. SCHIFFLIN

Harvey B. Fox
Director, Classification
and Value Division

Dear [redacted]

In a letter dated June 16, 1983, you inquired as to the dutiable status of certain ladies boots manufactured in Taiwan. Samples were submitted for examination.

The samples submitted are closed toe, closed back, over-the-ankle, cold weather, slip-on fashion boots. The stitched nylon upper shafts and insoles, lined or partially lined with a man-made fleece, are injected or cemented to unit-molded rubber/plastic bottoms.

The sample boots, by virtue of their substantial fleece-type linings, are designed to be worn as a protection against cold weather. Accordingly, they are classifiable under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber of plastics and which is designed to be worn over, or in lieu of, other footwear as s protection against water, oil, grease, or chemicals or cold or inclement weather in item 700.57, TSUS, and dutiable at the rate of 37.5 percent ad valorem.

Sincerely,

(Signed) Arthur P. Schifflin

Dear Sir:

Re: Decision on Application for Further Review of Protest Nos. 0401-2-000345 and 0401-0-000255

These protests were filed against your decision in the liquidation of the following entries.

Entry Number	Entry Date	Liquidation Date
391345	6/11/80	2/5/82
391169	4/07/80	2/5/82
390978	4/09/80	2/5/82
203883	4/08/81	3/5/82
203992	4/17/81	3/5/82
204070	4/21/81	3/5/82
204270	5/06/81	3/5/82
204389	5/18/81	3/5/82

FACTS:

The merchandise subject to protest consists of seamless latex rubber shoe covers used by the nuclear power industry to protect workers from radioactive contamination. They were classified under the provision for hunting boots, galoshes, rainwear and other footwear designed to be worn over, or in lieu of, other footwear as a protection against water, oil, grease, or chemicals or cold or inclement weather, all the foregoing having soles and uppers of which over 90 percent of the exterior surface area is rubber or plastics (except footwear with uppers of non-molded construction formed by sewing the parts thereof together and having exposed on the outer surface a substantial portion of functional stitching) other, in item 700.53, Tariff Schedules of the United States (TSUS).

C2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The protestant contends that the subject merchandise is classifiable under the provision for other footwear (except footwear having uppers of which over 50 percent of the exterior surface area is leather) having uppers of which over 90 percent of the exterior surface area is rubber or plastics (except footwear having foxing or a foxing-like band applied or molded at the sole and overlapping the upper), other, in item 700.56, TSUS. In essence, the protestant argues that item 700.53, TSUS, is not applicable to the subject overboots because they are not ejusdem generis with the enumerated exemplars, and they are not designed as a protection against water, oil, grease, or chemicals or cold or inclement weather. In support of its position, the protestant has submitted samples, statements, and descriptive literature.

ISSUE:

Whether the subject merchandise was correctly classified in item 700.53, TSUS.

In Stylo Matchmakers International, Inc. v. United States, 73 Cust. Ct. 78, C.D. 4556 (1974), the court determined that golf shoes worn for protection against wet weather were classified in item 700.53, TSUS. Considering whether the merchandise at bar was ejusdem generis with the enumerated exemplars listed in item 700.53, TSUS, the court observed as follows:

> The common characteristic in the exemplars is that they are waterproof or water repellant and are worn in wet weather or wet areas, usually for protection against water.

The descriptive literature indicates that the subject merchandise is "slip resistant," and "ideal for anti-contamination use in potentially slippery areas where non-scuffing of walk surfaces is essential."

C3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In a letter dated September 8, 1983, [redacted] the president of the importing company, stated that the shoe covers are designed as a protection against dust on the floors and equipment in nuclear power plants and facilities. It is further indicated that the purpose of the thick latex material is to reduce potential tears and consequent dust contamination. According to [redacted] the primary use of the shoe is in the maintenance of steam generators which must be drained of all liquid and ventilated for several days to ensure that no liquid exists.

Contrary to the protestant's assertion that the shoe covers are used primarily in the maintenance of steam generators, we have contacted a local nuclear power plant and discovered that these items are not used exclusively for steam generator repair work. They are multi-purpose items that are used when water and high contamination are involved. Furthermore, during steam generator repair work there may in fact be a thin film of water present. In addition to guarding against potential tears, the seamless construction is a protection against water penetration.

HOLDING:

The merchandise was classified correctly in item 700.53, TSUS. You should deny the protest. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

[redacted]

073784

Area Director of Customs
New York Seaport
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-3-002588

This protest was filed against your decision in the liquidation on December 3, 1982, of entry No. 82-238396-3 dated January 22, 1982, covering a shipment of men's athletic footwear produced in Korea.

FACTS:

The footwear involved, men's nylon/suede leather jogging shoes (Model Nos. A702, A707 and A708) with rubber/plastics soles, was liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather which requires their classification under the provision for other footwear of leather for men, youths and boys in item 700.35, TSUS.

In support of its position that the footwear is in chief value of leather, the protestant has made the following statements:

(1) The rubber/plastics components are separate and distinct materials and may not aggregated for chief value purposes;

(2) the manufacturer has overstated the rubber/plastics costs including mold amortization which is not properly allocable in a chief value determination;

cs

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

(3) the cement and cementing labor, included in the sole part are not allocable to the rubber/plastics components; and

(4) with respect to Model Nos. A707 and A708, the cost of the leather plus one-half of the leather stitching charge exceeds the total cost of the rubber/plastics materials.

ISSUE:

1. In determining component material of chief value of footwear, should the individual values of the rubber and plastics components be broken out separately?

2. Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather?

LAW AND ANALYSIS:

It has been consistently our position that in determining component material of chief value that the plastics and rubber components should be combined.

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete; (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous, or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, in the matter was that data submitted by the importer need not be accepted if there is

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

The protestant has not submitted any evidence to substantiate his claim that the manufacturer has overstated the rubber/plastics costs. Also, mold amortization is correctly included in a component material determination because it is a direct cost of manufacture.

We agree that the cost of the cement is not allocable to the rubber/plastics components. However, the cementing labor is allocable to the rubber/plastics components.

The cost breakdowns showing the amount of leather purchased and contained in the shoes is excessive. This fact was substantiated by a laboratory analysis.

The protestant's allocation of leather costs for Model Nos. A707 and A708 is not in accord with CSD 81-239 which stated that the cost of stitching leather overlays onto fabric uppers should be allocated among the materials comprising the uppers in proportion to their relative weights.

In view of the foregoing, it is our position that classification of the instant footwear under item 700.95, TSUS, was appropriate.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

c1

HOLDING:

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

OCT 10 1984

CLA-2:CO:R:CV:G
073876 DFC

073876

[redacted]

Dear [redacted]

In a letter dated February 17, 1984, you requested reconsideration of Headquarters Ruling Letter No. 073697 dated February 7, 1984, relating to the tariff classification of certain footwear manufactured in Taiwan.

In the cited ruling, this office held that Voyager patt No. ZV-1010 and patt No. Z-1004 were excluded from classification under item 700.56, Tariff Schedules of the United States (TSUS), by virtue of the presence of a foxing, and consequently, were properly classifiable under item 700.67, TSUS.

Your basic argument is that the upper would separate from the sole if the vinyl mudguard were not present. This is correct because the mudguard (which is cemented and sewn to the upper) has a much larger contact area with the sole than a "non-mudguarded" upper. A larger contact area does increase the effective strength of the adhesive. Therefore, this does establish that this "mudguard" is analogous in function to a traditional foxing because it also decreases the chances that the upper will separate from the sole.

You also assert that you cannot distinguish the shoes in issue here from the one which was the subject of HRL 073663 dated February 9, 1984. In that case, if there had been no mudguard, one would see the lining, not the exterior upper, covering the lower part of the foot. Here, one sees an upper covering the entire foot. This is why the "mudguard" overlaps the "upper" in the instant situation but not in the previous case.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

[redacted]
C9

For the stated reasons we believe the result reached in HRL No. 073697 was correct.

Sincerely,

[redacted] Arthur P. Schifflin

Harvey B. Fox
Director, Classification
and Value Division

MAY 17 1984

CLA-2 CO:R:CV:G
074193 c

074193

Dear Senator Packwood:

Thank you for your letter dated April 17, 1984, concerning the continuing controversy regarding determination of component material of chief value of [redacted] brand footwear produced in Korea.

You make reference to a memorandum dated March 12, 1984, from Headquarters to the New York Seaport relating to the [redacted] chief value inquiry which you state abrogates any agreements contained in our letter to you dated March 14, 1984. Specifically, you cite three paragraphs in that memorandum which you believe ignore the agreement reached between Customs and [redacted] The relevant portions of that memorandum are as follows:

> (3) We agree that due to the overstatements found for leather waste at Tong Yang and Samyang Tongsang, the leather waste maximums set forth in your memorandum of December 14, 1983, will apply to all leather waste figures derived from [redacted] test cuttings.
>
> (5) We will require the minimum waste figures for rubber/plastics set forth in your memorandum.
>
> (6) We will not allow [redacted] credit for recycled rubber and plastics. We will use raw material costs of other Korean makers of identical components.

In our letter to you dated March 14, 1984, we stated with respect to acceptance of cost or value of material as follows:

> We will accept [redacted] cost data for leather and rubber/plastics material, without regard to cost figures for those materials submitted by other manufacturers, unless there is tangible evidence that the data submitted are false.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

[redacted] C11

With respect to leather waste figures, Customs determined, as a result of the value investigation in Korea that the figures supplied by [redacted] for two shoe styles produced at three Korean factories were erroneous. Because of this finding, Customs asked [redacted] in a letter dated April 13, 1984, to provide the National Import Specialist at New York with information such as charge out sheets, printouts and financial statements which would substantiate all other leather waste claims above 47 percent, the actual amount of wastage found in the two shoe styles. Customs will allow [redacted] to prove leather waste figures beyond this amount. It should be noted that at a meeting held with [redacted] officials on April 11, 1984, they indicated a willingness to submit documentation supporting leather waste claims higher than 47 percent.

With respect to minimum waste figures for rubber/plastics, we note that the analysis of the foreign inquiry on [redacted] footwear states that "no Korean factory keeps any charge out sheets for the rubber and plastics materials used so there is absolutely no record of waste for any style." In view of the impossibility of verifying rubber/plastics waste, it is not feasible for us at this time to arrive at meaningful minimum waste figures for rubber/plastics. It is now our position that the rubber/plastics waste figures submitted by [redacted] should be accepted.

Credit for [redacted] recycled waste was disallowed for the following reasons:

(1) Cost of reclamation is quite high.

(2) [redacted] did not use any of its recycled waste in any [redacted] shoes.

(3) [redacted] never purchased any rubber/plastics waste from another maker.

(4) Any rubber/plastic waste not reclaimed was destroyed since there was no market for it.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

[redacted]
C12

074198

Upon reconsideration, we do not believe the reasons set out above for not allowing [redacted] credit for recycled waste can be sustained. Definitely, any recycled waste used in other footwear produced by [redacted] has the effect of lowering their rubber/plastics costs for footwear produced for [redacted] Inasmuch as [redacted] actual costs for recycled rubber/plastics waste do not exist according to a communication dated May 11, 1984, from [redacted] to [redacted] we will accept all of [redacted] cost figures for rubber/plastics materials.

I would be happy to meet with you on this matter at any time. However, a meeting was held on May 8, 1984, between [redacted] officials and Customs officials to resolve any residual problems on this matter.

If we can be of futher assistance in this matter, please do not hesitate to call on us.

Sincerely,

/s/ John M. Walker, Jr.

John M. Walker, Jr.
Assistant Secretary
(Enforcement and Operations)

The Honorable
Bob Packwood
United States Senate
Washington, D.C. 20510

31 JUL 1984

CLA-2:CO:R:CV:G
074511 c

074511

[redacted]

Dear [redacted]

In a letter dated July 3, 1984, you asked three questions with respect to a notice published in the Federal Register of March 12, 1984 (48 FR 9167) relating to the tariff classification of footwear known as "Rubber Duckies."

In response to your first question, the leather trim should be measured from the top line down toward the sole. That portion of the leather trim which faces the inside of the shoe should not be measured as exterior surface area of the upper.

With respect to your second question, we cannot advise you as to whether your bottoms consisting of rubber sheets, calendered soles and molded heels qualify as molded bottoms in the absence of samples.

Your third question relates to what portion of the tongue will be included as exterior surface area of the upper. The subject notice covered a "Rubber Ducky" having a flap or tongue which was not covered by any portion of the upper when tied. Its entire surface was visible and tactile. With this type of construction, the flap or tongue should be measured as exterior surface area of the upper. In those instances where the tongue is covered by eyelet stays, that portion of the tongue above the first eyelet is not to be included as exterior surface area of the upper.

Sincerely,

(Signed) Arthur P. Schifflin

Harvey B. Fox
Director, Classification
and Value Division

WASHINGTON

24 JAN 1985

REFER TO
CLA-2 CO:R:CV:G
075420 EMS
811051

075420

Mr. Marc S. Bluestein
Mercury International Trading Corp.
75 Forbes Boulevard
P.O. Box 430
Mansfield, Massachusetts 02048

Dear Mr. Bluestein:

Your letters dated October 5, 12 and 30, 1984, addressed to our New York office, inquiring as to the dutiable status of certain footwear to be imported from Taiwan, have been referred to our office for direct reply to you. You have submitted samples of a swatch of PVC coated material to be used in the manufacture of such footwear and a swatch of material before the PVC coating is applied and a sample of the footwear in question.

The PVC coated material will be used to form the exterior surface area of the uppers of the footwear subject to your inquiry. It is assumed for the purpose of this reply that the shoes will be over 50 percent by weight of plastics.

The issue presented by your request is whether the plastic coating on the fabric "visibly and significantly affects the surface" thereof within the meaning of Schedule 7, Part 1, Subpart A, Headnote 3, Tariff Schedules of the United States (TSUS). Specifically, Headnote 3 provides that:

> For the purposes of items 700.51 through 700.56, the rubber or plastics forming the exterior surface area specified, if supported by fabric or other material, must coat or fill the supporting material with a quantity of rubber or plastics sufficient to visibly and significantly affect the surface otherwise than by change in color, whether or not the color has been changed thereby.

In the context of Schedule 3 covering textile fibers and textile products, Customs issued a notice, 15 Cust. Bull. 562, T.D. 81-219 (1981), interpreting H. Rosenthal Co. v. United States, 81 Cust. Ct. 77, C.D. 4769 (1978), which held that the fabric from which certain coats were constructed fell within the definition of "coated or filled" in Headnote 2(a), Part 4, Subpart C, Schedule 3, TSUS. Similar to Schedule 7, Part 1, Subpart A, Headnote 3, that definition requires that for a fabric to be coated or filled for tariff purposes, the coating or filling must visibly and significantly affect its surface, other than by a change in color. Specifically, Customs stated that it would consider the surface of a fabric to be visibly affected by a coating or filling if the following criteria were met:

(1) the coating or filling material can be separately distinguished from the fabric by the naked eye;

[redacted] D1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

(2) the coating or filling material imparts a shine, luster or glossy appearance, or a dull appearance, that is noticeable by a casual examination; or

(3) the coating or filling material has caused the fabric to have a pronounced (obvious) appearance of stiffness. In regard to the appearance of stiffness, the fabric should appear significantly more rigid than that fabric would be if not coated or filled.

075420

15 Cust. Bull. at 563. In a Headquarters Ruling Letter concerning footwear with uppers constructed of woven fabric coated with plastic, file No. 069067 (1981), we held that the interpretation of the Rosenthal case set forth in T.D. 81-219 was applicable to footwear and concluded that the surface of the merchandise subject to inquiry was visibly and significantly affected by the plastic coating.

Applying the criteria set out in T.D. 81-219, it is our position that the plastic coating involved in this ruling request visibly and significantly affects the surface of the fabric within the meaning of Schedule 7, Part 1, Subpart A, Headnote 3, TSUS. The coating material in this case is visible. It also adds stiffness to the fabric and imparts a luster or shine to the fabric which is noticeable by casual examination. Moreover, a comparison of the weights of the coated and uncoated fabrics indicates that the coated swatch weighs approximately 19 grams per square foot while the uncoated swatch weighs roughly 8.1 grams per square foot. Although this factor was not considered in T.D. 81-219 and should not be considered determinative in a classification question, it provides a useful guide as to the quantity of coating involved in this particular ruling.

Therefore, the merchandise subject to your inquiry should be classified under the provision for other footwear which is over 50 percent by weight of fibers and rubber of plastics with at least 10 percent by weight being rubber or plastics and having uppers of which over 90 percent of the exterior surface is rubber or plastics in item 700.56, TSUS, and dutiable at the rate of 6 percent ad valorem.

Sincerely,

Arthur P. Schifflin

Arthur P. Schifflin
Chief, General
Classification Branch

Mr. Marc S. Bluestein
Vice President - Finance
Mercury International Trading Corp.
75 Forbes Boulevard
P.O. Box 430
Mansfield, Massachusetts 02048

Dear Mr. Bluestein:

Your letter dated December 19, 1984, addressed to our New York office concerning the dutiable status of an artificial suede boot for men produced in Taiwan, has been referred to this office for direct reply to you. A sample of the merchandise was submitted with your request.

You describe the sample submitted as a men's workboot made from an artificial suede material known as "Long Pen." This suede-like material is used on the collar, the eyelet stays, the mudguard, the heel and toe portions of the boot. Our examination of this artificial suede material reveals that it consists of a woven fabric backing with a middle layer of porous plastic material and then a top layer of plastic embedded with a mat of non-woven synthetic fibers, or flocking, which was sprayed or otherwise coated with a plastic material. Under 30-power magnification, it is apparent that some of the fibers are encapsulated but a great many individual fibers do not appear to be affected by the plastic spray or coating. The balance of the upper of the sample boot consists of a band of smooth vinyl in the ankle area. The vamp and side quarters are composed of an embossed plastic simulating a woven fabric. In addition, the sample boot has a 6 inch long toe bumper, which appears to be part of the molded outsole.

The first issue presented by the merchandise subject to your inquiry is whether the upper of this boot would be considered to have a plastic surface, classifiable in item 700.56, Tariff Schedules of the United States (TSUS), or a fiber surface, classifiable in item 700.61, 700.62, or 700.63, TSUS, depending on its value.

Item 700.56, TSUS, provides for other footwear which is over 50 percent by weight of rubber or plastic or over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which over 90 percent of the exterior surface area is rubber or plastics (except footwear having foxing or a foxing-like band applied or molded at the sole and overlapping the upper).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Schedule 7, Part 1, Subpart A, Headnote 3, TSUS, provides that:

> For the purposes of items 700.51 through 700.56, the rubber or plastics forming the exterior surface area specified, if supported by fabric or other material, must coat or fill the supporting material with a quantity of rubber or plastics sufficient to visibly and significantly affect the surface otherwise than by change in color, whether or not the color has been changed thereby.

While the plastic spray used on the suede-like material has had a visible and significant effect on some of the flocking, our examination of this material under 30-power magnification reveals that a great many individual fibers are not affected by the plastic spray or coating. The material is similar to a mink suede material utilized on a jogger involved in our Ruling Letter dated February 8, 1985, file No. 075422, which was considered not to be classifiable in item 700.56, TSUS. Thus, this merchandise is not classifiable in item 700.56, TSUS, because the plastic does not cover over 90 percent of the exterior surface of the upper.

The second issue presented is whether this boot possesses foxing or a foxing-like band which precludes its classification in item 700.61, 700.62, or 700.63, TSUS. Specifically, the question arises as to whether the 6 inch long toe bumper or the suede toecap and mudguard could be considered a foxing-like band.

First, we do not consider the toe bumper to constitute a foxing-like band since it does not substantially encircle the boot subject to your inquiry, see Customs Guidelines Relating to Characteristics of Foxing and Foxing-Like Band, T.D. 83-116 (1983). In addition, we do not believe that the configuration of the suede toecap and mudguard comes within the purview of the term "foxing" or "foxing-like" band. A configuration of a toecap similar to the one at issue here was considered not to be "foxing" or a "foxing-like" band in our recent Ruling Letter dated February 27, 1985, file No. 075348.

In view of the foregoing, this merchandise is classifiable depending on its value in item 700.61, TSUS, (if valued not over $6.50 per pair) dutiable at the rate of 37.5 percent ad valorem, 700.62, TSUS, (if valued over $6.50 but not over $12.00 per pair) dutiable at the rate of 90 cents per pair plus 20 percent ad valorem, or item 700.63, TSUS, (if valued over $12.00 per pair) dutiable at the rate of 20 percent ad valorem.

Sincerely,

Re: Decision on Difference of Opinion Forwarded on Report From Detroit, Customs Form 6431, Dated December 3, 1984, Concerning Automatic Loaders for Machine Tools

Dear Ms. DeGaetano:

In your memorandum of March 13, 1985, you forwarded the difference of opinion for our decision on the classification of certain automatic loaders for machine tools. This ruling is our decision.

FACTS:

The difference of opinion concerns a device that has been designed to automatically load and unload the S-1255 series turning machine (lathe). The automatic loader is controlled by a system of positioning motors and hydraulic motors. In operation, cylindrical parts are presented to the loader by an automatic parts chute, loaded into the lathe, and then removed. Although not essential to the completion or operation of a lathe, it does enhance its speed and efficiency.

Automatic loaders for machine tools have been the subject of numerous rulings. However, in a ruling letter of July 23, 1984 (file 074289), a loader for a machine tool was classified under the provision for other lifting, handling, loading, or unloading machinery in item 664.10, Tariff

DS

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Schedules of the United States (TSUS). Prior to this ruling, the competing provisions for machine tool loaders were the provisions for parts of machine tools and accessories (machines) used principally with machine tools in items 674.53 and 674.55, TSUS, respectively. The primary test applied in those cases was whether a loader was designed for use with a single type of machine tool (i.e., a lathe or a drill) or was suitable for use with more than one type of machine tool.

The often-cited judicial opinions concerning whether certain machines are parts or accessories of machine tools are also silent on the issue as to whether item 664.10, TSUS, is a relevant competing provision. See the decisions in United States v. C. F. Liebert, 59 CCPA 43, C.A.D. 1035 (1972), and T. D. Downing Co. et al. v. United States, 68 Cust. Ct. 71, C.D. 4338 (1972).

ISSUES:

Whether automatic machine tool loaders are within the class or kind of machinery contemplated in item 664.10, TSUS, and, if so, whether the provision in item 664.10 for other lifting, handling, loading or unloading machinery is more specific than the provisions for parts or accessories in items 674.52, 674.53, and 674.55, TSUS?

LAW AND ANALYSIS:

In our ruling of January 30, 1984 (file 073587), we held that document feeders for photocopying machines were

075867

[redacted] D6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

classifiable as parts of such machines rather than as other lifting, handling, loading or unloading machinery. In that ruling we stated that the type of equipment intended by the provision in 664.10 was industrial equipment designed for handling or moving articles from place to place in and around industrial plants, airports, bus and rail terminals, warehouses, docks, garages, and post offices. In view of the principle that a tariff term does not include everthing literally within its scope, it was concluded that item 664.10 did not include office equipment. United States v. Andrew Fisher Cycle Co., 57 CCPA 102, C.A.D. 986 (1970).

Loading devices used with machine tools, however, are industrial equipment. Except for the unexplained absence of consideration in prior judicial and administrative rulings, no reason or evidence has been offered which would exclude them from the scope of the language in item 664.10, TSUS. Furthermore, the language in issue does not distinguish such industrial loading equipment by size of loader or workpiece.

Item 664.10, TSUS, provides for certain articles eo nomine and for other articles under a residual provision. The latter is at issue in this case. The terms "other lifting, handling, loading, or unloading machinery" are generic designations that describe classes of articles, and, in our opinion, cover each article within those classes as

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D7

075867

if provided by name. Robert Bosch Corporation et al. v. United States, 63 Cust. Ct. 187, C.D. 3895 (1969). Therefore, absent contrary legislative intent or other limitation, we conclude that the automatic loaders are described by the language in item 664.10, TSUS.

The applicable language in item 664.10 is a specific provision within the meaning of General Interpretative Rule 10(ij), TSUS. Tariff provisions which describe articles by name or specific function are specific provisions for this interpretative rule. Foster Wheeler Corp. v. United States, 61 Cust. Ct. 166, C.D. 3556 (1968); J. E. Bernard & Co. v. United States, 59 Cust. Ct. 31, C.D. 3060 (1967). Therefore, even if the automatic loader in issue were a part of a specific machine tool (lathe), it would be precluded from classification in item 674.53, TSUS, by operation of General Interpretative Rule 10(ij), TSUS.

The provisions for machine tool accessories in items 674.55 (machines) and 674.56 (other than machines) were intended to provide for those devices which, although not classifiable as parts of any particular machine, were principally used with machine tools. These devices would otherwise have been classified under one of several basket provisions. Tariff Classification Study, Schedule 6, pages 272 and 273 (November 15, 1960).

Although the provisions for accessories are not

075867

D8 [redacted]

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

075867

subject to General Interpretative Rule 10(ij), the term "accessory" for machine tools is less specific than the term "other lifting, handling, loading, or unloading machinery" for purposes of tariff classification. The accessory provisions address a broad range of devices which are auxiliary or subsidiary devices for machine tools, or are not specific to any one machine tool. The diversity of articles that could be considered as accessories presents a test that is easier to satisfy than a test based on a specific function of lifting or loading. Furthermore, it would appear anomalous that a loader, held to be a "part," is precluded from classification as a part of a machine tool while a loader, held to be an "accessory," is classified as an accessory.

HOLDING:

The automatic loaders in issue are classifiable under the provision for other handling, loading, or unloading machinery, in item 664.10, TSUS.

EFFECT ON OTHER RULINGS:

It is recognized that the classification of machine tool parts and accessories, previously considered in ruling letters, may be affected by the priniciples stated in this ruling. However, the principles of this ruling are to be applied, and, to the extent that a conclusion in a prior

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

[redacted]
D9

ruling is inconsistent with these principles, the prior ruling or rulings are modified.

If there is an ambiguous or unresolved substantive or procedural issue relating to a prior ruling, then that issue should be presented to the Customs Service for decision.

Sincerely,

Arthur P. Schaffer

CLA-2 CO:R:CV:G
076312 JGB

076312

Mr. Harold I. Loring
Grunfeld, Desiderio, Lebowitz
and Silverman
Suite 2238
2 World Trade Center
New York, New York 10048-0654

Dear Mr. Loring:

This letter is in response to your request for a ruling in your letter and accompanying legal memorandum of September 12, 1985, in part on behalf of Mamiye Brothers, Inc., concerning several styles of children's two-piece playsuits. This letter incorporates a request for a ruling from Mr. Jerry Armani of Mamiye Brothers, Inc., dated April 10, 1985, concerning two styles of two-piece garments (Playsuit A and Playsuit B) and your request covering styles 1268, 1269, 1270, 1272, and 6206. Because this merchandise has characteristics in common with the merchandise that was the subject of our ruling to you dated March 11, 1986, Headquarters Ruling Letter (HRL) 075949, this ruling relies in part on the reasoning of that ruling.

All of the styles covered by this ruling have the following characteristics in common:

The bottoms, whether pants or shorts, have suspenders permanently attached to the waistband in back.

The waistband is elasticized in back, but the elastic portion is less than one-half of the circumference of the waistband.

The suspenders thread through loops or under straps permanently sewn to the shoulder area of the top, thereby keeping the suspenders on the shoulder during wear.

The two parts are imported together, are bought and sold as a unit, and are intended to be worn together.

The manner in which the two parts are joined by design makes the use of one piece not practicable without the other; although, with these samples the use of the bottom is more dependent on the top than the top dependent on the bottom.

D11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076312

No feature ornaments the garments. Except for styles 1270 and 6206, where the component fiber in chief value is not indicated, all styles are classifiable in item 384.5233, Tariff Schedules of the United States Annotated (TSUSA).

Playsuit A consists of an all cotton twill blouse and all cotton twill printed shorts. The blouse pulls on over the head. On each shoulder are loops that accommodate suspenders attached to the shorts. The suspenders may be buttoned on themselves on one of two buttons to provide for varying sizes. At the front waistband the suspenders thread through loops sewn to the front of the waistband.

Playsuit A's top and bottom are coordinated as to fabric and the color of the top is coordinated with a color in the stripe in the bottom print. The shoulder loops keep the suspenders up. Playsuit A is classified in item 384.5233, TSUSA, the provision for "Other women's, girls', or infants' wearing apparel, not ornamented: Of cotton: Not knit: Other: Other: Other, (including coveralls, jumpsuits, and similar apparel); Coveralls, ...; other playsuits, washsuits, sunsuits and similar apparel: Other: Other: Infants'," dutiable at 9.4 percent ad valorem.

Playsuit B consists of an all cotton plainweave blouse and plainweave pants of all cotton. The blouse is a short sleeved, collared garment with full front button closure. The blouse has straps sewn into the seams on each shoulder to accommodate suspenders. The pants have a pleated front with a drop-V waistband in front. The pants have two pockets. The suspenders of the same fabric are designed to thread through the loops on the front of the waistband, buttoning on themselves on one of two buttons.

Playsuit B is classified in item 384.5233, TSUSA.

Style 1268 consists of an all cotton plainweave blouse and all cotton twill shorts with suspenders. The short-sleeved blouse has a collar and a full front opening that closes using three pairs of complementary Velcro-like patches of bright colors situated where buttons and buttonholes are usually found. The blouse has straps of the same material as the blouse permanently attached at the collar and at the seam where the sleeve begins.

The shorts have angled pockets in front that may be partially closed by a triangular tab of the same material sewn to the top of the pocket. The fasteners are another pair of

D12 [redacted]

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

075949

brightly colored complementary Velcro-like patches about an inch square, one attached to the tab of each pocket and the other attached to the front of the shorts. All the pocket features appear to be functional and only incidentally decorative; thereby not qualifying as ornamentation. The suspenders thread under the straps on the shoulders and then thread through loops permanently attached to the front of the waistband. The suspender ends are attached to themselves by means of two complementary Velcro-like strips approximately 1 inch by 2 inches in size. These longer strips permit a variation of the suspender attachment according to the size of the wearer.

The garments are coordinated in style because of the various brightly colored Velcro-like patch closures on the blouse that correspond to the colors of the patch closures on the shorts. Following the rationale of HRL 075949, this sample is determined to be within the range of garments considered to be playsuits.

Style 1268 is classified in item 384.5233, TSUSA.

Style 1269 presented in size 6 is the same as style 1268, except that the bottom part is full-length pants instead of shorts. Following the rationale of HRL 075949, we conclude that this is also within the range of garments considered to be playsuits. It is classified in item 384.5233, TSUSA.

Style 1270 is a plainweave shorts and top combination. The short-sleeved blouse has a collar and full front opening with button closure. Straps about 3/4 inch in width run along the top of the shoulder and are permanently attached at either end. One attachment is at the seam where the sleeve begins and another is at the collar seam. The shorts with four pleats in front are held in place by the suspenders that thread through the shoulder loops. The suspenders button onto themselves in front after being threaded through loops that are permanently attached to the front waistband. The shorts have two side pockets.

Following the rationale of HRL 075949, noting that the parts are coordinated as to color and fabric, and noting that the shoulder loops are intended to hold the suspenders in place during wear so that the use of the shorts is not practicable without the blouse, we conclude that style 1270 falls into the range of garments considered to be playsuits. This playsuit, if in chief value of cotton, is classified in item 384.5233, TSUSA.

D13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Style 1272, a two-piece set with slacks and a blouse, is labeled as 100 percent cotton. The slacks have suspenders that thread through the permanent shoulder straps as in style 1270, above. Style 1272 has twill pants and a plainweave blouse. The turquoise color of the blouse is repeated in part of the multi-color print design on the pants. This feature constitutes color coordination of the two parts.

The suspenders, as with style 1270, thread through fabric loops that are permanently attached to the front waistband and button on themselves on one of two sets of buttons. The button attachment of the suspenders consists of two buttons next to each other. The use of an alternate set placed further down the suspender allows more room for a larger child. The two buttons together may be considered functional in that an active child may exert a substantial amount of stress on the suspender attachment and the extra button would help the suspender attachment to withstand this stress.

The pants in style 1272 have two front patch pockets that are secured on top with two buttons. As with the styles mentioned above and following the same rationale, Style 1270 falls into the range of garments considered to be playsuits. It is classified in item 384.5233, TSUSA.

Style 6206, also marked with a hang tag showing style 58297, consists of four parts. There are long pants with suspenders, a blouse, a tie with a separate textile ring to hold the parts of the tie around the neck, and a pair of sunglasses. The sunglasses and tie are each classified separately.

The blouse is a plainweave printed material with one front pocket, a full front button opening, collar, and short sleeves. Both pants and blouses are of unspecified fiber content. The blouse has shoulder straps similar to the other styles discussed above. The blouse also has a textile loop sewn into the seam of the front pocket at the side nearest to the opening. This loop of the same material as the blouse does not ornament the blouse because it has the function of holding the sunglasses.

The pants are distinguished from the other styles discussed above in that these have a front fly opening and a button closure above the fly on the waistband. They have two side pockets, one back patch pocket, and a four-pleat front. The front of the white pants has a decoration printed on it in black that is designed to look like embroidery. It does not constitute ornamentation. The suspenders are attached to the front of the waistband by means of a button on the front of the

D14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

suspender fitting through a buttonhole in the waistband. Another button on the suspenders placed further up serves the function of accommodating a wearer of smaller size.

The straps on the shoulder of the blouse keep the suspenders from falling down during wear. We conclude that these two parts fall into the range of garments considered to be playsuits. If these two parts are in chief value of cotton, they are classified in item 384.5233, TSUSA.

The sunglasses do not form an entirety with the playsuit because, among other things, the identity of the sunglasses does not merge with the identity of the playsuit when the two things are imported and sold together in a polyethylene bag. The sunglasses are still sunglasses in the same way that, for example, a pocketwatch and chain when imported with a pair of pants with a watch pocket would not form an entirety with the pants. They may be used together, but their use and identity remain distinct. The sunglasses are therefore classified in item 708.4300, TSUSA, if valued not over $2.50 per dozen, or in item 708.4520, TSUSA, if valued over $2.50 per dozen.

The tie is separately classified because of the requirements of Headnote 3, Part 6, Schedule 3. A tie is considered a separate garment and is not included in the range of garments considered to be part of a playsuit. At least it is an accessory the use of which is completely optional in the wearing of the playsuit. The use of the blouse and pants together is completely practicable without the tie. This tie would be classified in item 384.5299, TSUSA, if in chief value of cotton.

Sincerely,

Harvey B. Fox

U.S. CUSTOMS SERVICE

WASHINGTON, D.C. 20229

CLA-2 CO:R:CV:G
076355 JAS

30 SEP 1986

076355

Joseph S. Kaplan, Esq.
Ross & Hardies
575 Fifth Avenue
New York, New York 10017-2422

Dear Mr. Kaplan:

In submissions dated May 31, 1985, and June 30, 1986, you ask that we reconsider a ruling issued to your client by the Area Director of Customs, New York Seaport, concerning the classification of certain wood staves from Canada. A sample stave was submitted.

The ruling to which you refer, 809383, dated October 31, 1984, in part held wood staves of Douglas-fir, 5-1/2 inches wide by 3-1/2 inches thick and in random lengths, to be classifiable under the provision for articles not specially provided for, of wood, in item 207.00, Tariff Schedules of the United States (TSUS). These staves were described as pressure creosote treated, tongued on one edge and grooved on the other, and double tenoned at the ends. The subject staves are to be used in wood stave pipelines.

You state that the staves are manufactured from undressed lumber in a single pass through a molder which dresses the lumber, chamfers the edges, rounds and incises the top and bottom surfaces, and tongues and grooves the sides. The double tenon joint is then produced with a single saw cut. You maintain that the proper classification of these staves is under the provision for staves and hoops, in item 204.15, TSUS, or under the provision for softwood lumber and siding, drilled, or pressure treated with creosote, but not otherwise treated, in item 202.52, TSUS.

Your initial submission suggests this merchandise is material or stock from which staves are to be made. The submitted sample, however, is of a finished stave which, we presume, is ready for assembly at the time of importation. It conforms to the description of the merchandise in ruling 809383 and is 20-1/2 inches long. With respect to the proposed classification in item 204.15, various technical materials purport to show that the subject merchandise is commonly known

TO THE

E2

in the trade and commerce of the United States as "staves," of a type used in the manufacture of tanks, vats, flumes, ducts, silos and pipes, among other things.

The superior heading to item 204.15 covers "Casks, barrels, hogsheads, other coopers' products, and parts thereof, all the foregoing of wood." The instant staves, in their imported condition, are said to be dedicated for use in a wood stave pipeline. The issue to be decided is whether a wood pipeline is a coopers' product within the contemplation of the superior heading to item 204.15, such that the subject staves would be of the kind encompassed by item 204.15. You would answer this question in the affirmative on the theory that the phrase "coopers' products" describes the specialized output of the particular class of artisans known as coopers; the instant pipeline staves are made of the same lumber, by the same persons using the same tools, techniques and skill as are staves used in tanks, vats, hogsheads, etc.

We respectfully disagree with this contention. Explanatory materials to Customs Cooperation Council Nomenclatlure (CCCN) Heading 44.22, the language of which substantially parallels that of the superior heading to item 204.15, restricts such heading to containers which are products of the coopers' trade, naming as examples, casks of various kinds (tuns, barrels, hogsheads, etc.) whether tight (for wet goods) or slack (for dry goods), as well as vats, tubs, buckets, cellar jugs, etc. These materials suggest a legislative intent to restrict the concerned TSUS heading to a class of articles which function primarily as containers, vessels, or receptacles. For these reasons, a wood stave pipeline, which by design functions primarily as a means of conveyance, is not believed to be a copper's product for tariff purposes, and its component staves, like the submitted sample, cannot be classifiable in item 204.15. You maintain that the original Brussels Tariff Nomenclature contained no provision for staves at the time the TSUS was promulgated, such that Heading 44.22 provides no guidance as to pipeline stave classification. We believe the more pertinent consideration is that Heading 84.22 and its Explanatory Notes do, in fact, clarify the scope of the term "coopers' products" for tariff purposes in the manner indicated.

With respect to the proposed item 202.52, TSUS, classification, ruling 809383 was predicated on I.A. 98/81 (068837), which interpreted the Schedule 2, Part 1, Subpart B, Headnote 2(a)(iii), TSUS, definition of worked lumber. That decision held the term "or," used in defining worked lumber that has been "matched" i.e., provided with a tongued-and-grooved joint at the edges or ends, is to be construed in the disjunctive, such that lumber which has both been tongued and grooved on the edges and double tenoned at the ends is considered manufactured beyond the condition of worked lumber and should be classified as an "article" of lumber.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

076355

E3

You contend that the term "or" in the cited headnote should be construed in the conjunctive as well, that is, "and/or," so as to preclude the anomalous results of classifying a product that otherwise conforms to the statutory definition of lumber as something else. We respond by stating that the express statutory language generally controls, that is, the drafters are presumed to mean exactly what they say, unless there is convincing evidence that Congress intended to convey a different meaning. Neither the Tariff Classification Study nor the Customs Cooperation Council Nomenclature gives clear insight into the scope of the various provisions for lumber. Consequently, even if we were to agree that the involved headnote is ambiguous, there is no demonstrated legislative history upon which to rely. The converse is true under the facts presented in C. B. Smith Co. v. United States, 64 Cust. Ct. 278, C.D. 3991 (1970), a case which you cite. There, the court construed the provision in item 202.53, for hardwood, edge-glued or end-glued, to include face-glued hardwood as well. The court found that there was a demonstrated ambiguity in the involved provision, owing to the fact that Congress was repeatedly informed that face-glued hardwood was not within proposed item 202.53, yet refused to change the provision to include it. The court concluded that "or" in the provision actually meant "and/or" because contrary decision would leave a class of glued-up lumber outside a provision obviously intended to include all glued-up lumber. Notwithstanding the facts in C. B. Smith could just as easily have supported a conclusion that Congressional inaction evidenced an intent to exclude face-glued hardwood from item 202.53, there is no demonstrated ambiguity in Headnote 2(a)(iii). Consequently, applying the word "or" in the cited Headnote strictly in the disjunctive, we conclude that the provision in item 202.53 is not applicable to the instant merchandise.

The court, in A. N. Deringer, Inc. v. United States, 61 Cust. Ct. 66, C.D. 3530 (1968), held certain wedge shaped articles of wood sawed lengthwise, crosscut and resawed longitudinally, to be within the provision for softwood lumber, in item 202.03, TSUS, rather than classifiable as articles of wood, in item 207.00, TSUS, despite the fact they were suitable only for one purpose. Decisions were noted which held similar articles to be lumber, rather than manufactures of wood, under both the Tariff Act of 1930 and the TSUS. However, the court stressed in very strong dictum that if the lumber had been processed to the extent that it itself became the article for which the material was intended, then it was dutiable as a manufacture of wood, and not as lumber. The court cited United States v. C. S. Emery & Co., 18 Ct. Cust. Appls. 208, T.D. 44399 (1930), in which a similar conclusion was reached under the Tariff Act of 1922. Note as well PRD 74-8, dated March 12, 1974, and a PRD dated May 13, 1982 (068984), in which these issues are discussed. Copies are enclosed.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076355

E4

From these decisions it appears that lumber which has been tongued and grooved on the edges but not on the ends remains a material classifiable in Schedule 2, Part 1, Subpart B, TSUS, while such lumber double tenoned on the ends as well, is advanced beyond the material stage and is an article of wood for tariff purposes. Consequently, it is our opinion that the phrase "at the edges or ends" in the Schedule 2, Part 1, Subpart B, Headnote 2(a)(iii), TSUS, definition of worked lumber, is to be interpreted to read "either at the edges or ends but not both." If Congress had intended a result consistent with your interpretation, the concerned provision would have been so drafted. Note for clarification purposes the entire provision in item 202.52, TSUS, which includes lumber treated with creosote or other wood preservative, or both, but not otherwise treated.

New York ruling 809383, and the ruling of September 17, 1981 (068837), are affirmed.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

SUBJECT: Internal Advice Request No. 74/85 Concerning Merchandise Identified by the Importer as "Halloween Costumes"

This is in response to your memorandum dated August 30, 1985, requesting Internal Advice on the tariff classification of merchandise identified by the importer as Halloween costumes. Your request was initiated by a letter dated July 3, 1985, from Surrey and Morse, Washington, D.C., on behalf of Traveler Trading Co., Inc.

FACTS:

The merchandise at issue is Halloween costumes and accessories used by adults. The particular costumes which are the subject of this internal advice include a vampire's cape, an adult vampire/witch dress which may be worn alone, an adult nun costume, which also may be worn alone, and an over-sized polka dot bow tie.

One view on the classification of this merchandise is that the provision for toys should apply. The other view is that the proper classification of this merchandise is as wearing apparel.

[redacted]
E6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

ISSUE:

Whether the Halloween costumes are classifiable as wearing apparel under the appropriate provisions of Schedule 3, Tariff Schedules of the United States (TSUS), or as toys in item 737.95, TSUS.

LAW & ANALYSIS:

Presently, a diverse classification exists between children's and adults' costumes. Although, children's costumes have been consistently classified as toys in Schedule 7, TSUS, most adult costumes have been classified as wearing apparel in Schedule 3. One reason that adult costumes are differentiated is due to previous decisions classifying adult masks according to the component material of chief value and not as toys. See Rulings 801944, January 12, 1981, and 801908, January 29, 1982. The rationale for classification in this manner was that the masks had various uses and were not chiefly used for amusement as was intended in the toy provision.

Headnote 2, Schedule 7, Part 5, Subpart E, Tariff Schedules of the United States (TSUS), expanded the definition of toys to include "any article chiefly used for the amusement of children or adults." Chief use is defined as that use which exceeds all other uses (if any) combined.

We find the costumes which are the subject of this Internal Advice request to be articles chiefly used as garments in the context of adult social activities where costumes are required or appropriate.

[redacted]
E7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076417

Adult party costumes must be viewed as a class or kind of merchandise, irrespective of their relative cost or quality of contruction. Unlike children's costumes, which as a class are likely to be amusing per se to children because of the wearer's identification with the theme or character of the costume, adult costumes are, like certain formal wear, specialized garments primarily used in social contexts in which the garments' potential for amusement is no more than a secondary factor.

HOLDING:

Accordingly, adult costumes of the type described above are of a class or kind of merchandise properly classified as wearing apparel under the appropriate provisions of Schedule 3, TSUS.

You should inform the inquirer of this ruling.

Miss Penny S. Cronin
Cronin Investments
706 Park Crossing Way
Lilburn, Georgia 30247

Dear Miss Cronin:

You requested a ruling on the tariff classification of arthritis-splint gloves to be imported from the Far East or the Caribbean Basin Area.

We understand the glove to be of plastic, to be seamed by heatsealing, and to be used "to splint the hands of arthritis and stroke patients."

The gloves are classified in item 705.8560, Tariff Schedules of the United States Annotated (TSUSA), which takes a Column 1 rate of duty of 14.1 percent ad valorem.

We do not regard this glove as a splint or similar fracture appliance, nor as a prosthetic article which would be used to replace a missing part of the body. Moreover, it does not meet the standards for orthopedic appliance, because it would be generally available for sale to the public and would not be sold by a doctor's prescription for relief of a crippling arthritis condition. For these reasons, the gloves would not be eligible for classification in items 709.56 or 709.57, Tariff Schedules of the United States (TSUS).

The gloves would not be eligible for entry under the former item 960.15, TSUS, the provision for "articles specially designed for the use or benefit of...physically ...handicapped persons," because that provision is limited by the exclusion of therapeutic articles. We understand that the merchandise at issue is used by a person with arthritis in the hand or by a stroke patient to relieve stiffness and pain. This function would be considered therapeutic.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

[redacted]
E9

The gloves would be eligible for duty-free treatment, if manufactured in a beneficiary country in the Caribbean Basin, inasmuch as they are not specifically excluded from that program by the headnotes to the relevant portion of the TSUS. The duty-free treatment must depend, of course, on compliance with regulations for the Caribbean Economic Recovery Act, §10.191 et seq. of the Customs Regulations, copy enclosed.

Sincerely,

Arthur P. Schaffner

Port Director of Customs
526 Water Street, Room 301
Port Huron, Michigan 48060-5471

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3802-4-000175

This protest was filed against your decision in the liquidation on April 13, 1984, of entry No. 83126248 dated June 13, 1983, covering a shipment of steel electrical cabinets produced in Canada.

This ruling concerns the correct tariff classification of the electrical cabinets.

FACTS:

The merchandise at issue is wall-mounted electrical cabinets. The cabinets consist of steel boxes of various sizes, with doors, used in industries as housings for circuitry. The broker for the protestant argues that the cabinets are "custom built according to the customer's specifications" and that they meet the Schedule 7, Part 4, Subpart A, Tariff Schedules of the United States (TSUS) definition of "furniture." He claims that the cabinets should be classified under the provision for furniture, and parts thereof, not specially provided for, in item 727.70, TSUS (formerly item 727.55, TSUS). He cites Treasury Decision (T.D.) 66-72(13), T.D. 70-49(10), and Customs Decision (C.D.) 3128 in support of his claimed classification because they deal with "storage" or "display" articles and the instant cabinets are used to store electrical apparatus.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E11

The Port Huron import specialist classified the electrical cabinets under the provision for articles of iron or steel, not coated or plated with precious metal, other articles, other, in item 657.25, TSUS, because they act as a housing for electrical circuitry.

The Port Huron supervisory import specialist believes that the cabinets are classifiable under the provision for other electrical apparatus in item 685.90, TSUS. Alternatively, he thinks that they are classifiable under the provision for other articles of iron or steel in item 657.25, TSUS, if they are "home fuse boxes" with places in the cabinets for wires to be connected.

ISSUE:

Are these wall-mounted electrical cabinets classified as other articles of steel in item 657.25, TSUS, as other electrical equipment in item 685.90, TSUS, or as furniture not specially provided for in item 727.70, TSUS?

LAW AND ANALYSIS:

In a letter dated July 3, 1985, the protestant's broker states that all of the instant cabinets are wall-mounted. Headnote 1 of Schedule 7, Subpart 4A, TSUS, defines furniture, in part, as "movable articles of utility, designed to be placed on the floor or ground...." (Emphasis added). Inasmuch as all of the instant electrical cabinets are wall-mounted, they are not designed to be placed on the floor or ground, therefore they cannot be classified as furniture in item 727.70, TSUS. The three decisions cited by the broker are distinguishable for the same reason.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC_____

[redacted] E12

076636

According to the description material included in the file, some of the cabinets are of a general purpose type used for housing or storage and are not essential to the completion of a specific machine or apparatus. Consequently, they are properly classifiable as articles of iron or steel, other, in item 657.25, TSUS.

However, also at issue are articles which may be determined from their design (e.g., brackets for light fixtures or switches, interior connection terminals, pushbutton holes, etc.) to be dedicated to use chiefly with switches, switchgear, or other electrical apparatus. Such articles are classified under the provision for other electrical apparatus in item 685.90, TSUS.

HOLDING:

The cabinets which are of a general purpose type used for housing or storage are classified in item 657.25, TSUS. The cabinets which are dedicated for use chiefly with electrical apparatus are classified in item 685.90, TSUS. The protest should be denied. A copy of this letter should be sent to the protestant along with the CF 19 Notice of Action.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

OCT 31 1986

CLA-2 CO:R:CV:G
076760 JCH

District Director of Customs
P.O. Box 6150
Dallas, Texas 75261

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 5501-3-000055

The above-captioned protest and application for further review were filed against the tariff classification of aircraft jet engine compressor blades which were the subject of entry No. 269318 dated November 4, 1981, and entry No. 271201 dated January 18, 1982, filed at the port of Dallas/Fort Worth. This merchandise is a product of West Germany. Our decision follows:

ISSUE:

The merchandise at issue was classified by Customs officers under the provision for compressor parts which was designated item 661.12, Tariff Schedules of the United States (TSUS), and required a column 1 rate of duty of 4.2 percent ad valorem in 1981. In 1982 it was redesignated item 661.10, TSUS, and required a column 1 rate of duty of 4.1 percent ad valorem. The correlative provision for an exemption from duty under the Agreement on Trade in Civil Aircraft, TIAS 9620, 31 UST part 1, p. 619 (1979), as implemented by item 661.14, TSUS, before amendments which were authorized by Proclamation 5292, 50 F.R. 223, and which due to typographical error were not incorporated into the TSUS until the 1986 edition, did not include compressor parts.

E14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

It is claimed in the protest that the merchandise is still eligible for the exemption for civil aircraft and parts under item 660.73, TSUS, which implements the exemption as it applies to aircraft engine parts. It is also claimed that the merchandise was previously classified as parts of engines and that the present dutiability resulting from reclassification represents a change in an established and uniform practice not in compliance with section 315(d) of the Tariff Act of 1930, as amended.

FACTS:

The blades in question are used in the compressor system in a jet engine for aircraft. Blades in this type of application are typically radial or axial centrifugal devices which are used together with stators for staging to increase fuel and air mixture intake pressures far beyond the pressure which could be achieved by a single rotary device. There are different types of jet engines for aircraft, including turbofan engines. These also involve many different configurations mainly determined by the location of the fan in relation to the other components. However, in all jet engines, the rotary parts of the compressors and the stators serve the same function.

LAW AND ANALYSIS:

The enabling legislation for the Agreement on Trade in Civil Aircraft was Title VI of the Trade Agreements Act of 1979, 93 Stat. 144, 268. However, full implementation of that legislation in the initial TSUS breakouts made for civil

076760

F1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

aircraft was withheld pending certain reciprocity considerations involving our trading partners. Full implementation, including the free rate for parts of compressors authorized in the original legislation, has now been authorized by Proclamation 5292, supra, but the effective date of those changes postdates the entries involved in this protest. Therefore, while the substantive issues now raised in the protest have become moot, we must at this time consider the question of whether, in effect, the merchandise at issue is the type of merchandise for which the free rate was specifically delayed.

Pertinent to this question are two previous Customs precedents, our decision of June 30, 1978, file No. 056362, and our decision of July 7, 1983, IA 49/83, file No. 072289. Both of these decisions support the claims made in the protest to the extent each found that merchandise variously described as "stator vanes" and "stator blades" was classifiable as parts of engines rather than as parts of compressors. However, these decisions contained certain guidelines which appear to require distinguishing the instant rotary devices from the rotary devices previously ruled on and classifying them as parts of compressors. On this review of our previous decisions we adhere to the conclusions reached, but their rationale, in part, can no longer be regarded as representing the current views of the Customs Service.

The guidelines in question tend to promote for the merchandise and the distinctions drawn an actual use test for classification. That is, the Customs Service has looked, for

076760

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

the tariff classification of each rotary device, to certain design characteristics idiosyncratic to the particular make, model or type of aircraft jet engine in which the device is used as a part. However, parts provisions are use provisions other than actual use provisions. As such, they are governed by General Headnote 10(e)(i), TSUS. Under that rule the question is not how a part is actually used. Inquiry rather must be made as to the majority of uses, or the chief use, of the class or kind of article of which the part is an exemplar.

The purpose of this rule is to promote tariff classification uniformity of articles which although not identical share pertinent common denominators. That purpose, of course, is defeated the more narrowly class or kind is defined or if class differences are based on artificial distinctions. It is true that in certain circumstances class or kind may be as narrowly defined as one article. See, for example, Converse Rubber Company v. United States, 69 Cust. Ct. 55, C.D. 4374 (1972). Further, the use for which merchandise has been made to specification will generally be found to be the chief use of the class, particularly where other merchandise which is otherwise similar, but due to manufacture in accordance with different specifications, cannot be put to the same use. See our decision of October 27, 1981, IA 63/81, file No. 068689. But there is no justification for regarding aircraft jet engine compressor blades made to specification for use in only one model or make of engine as a separate class in

026760

F3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

itself or for otherwise narrowly construing the extent of the class. Unlike the merchandise in our October 27, 1981, decision, supra, jet compressor blades, even though made to different specifications, all have the same use.

The question, then, is whether jet engine compressor blades, as a class or kind of merchandise, are chiefly used in systems which, if imported as single entities, would be classifiable under the TSUS as compressors. Granted the Customs Service does not have information available to answer this question and it further poses an impractical if not an impossible burden of proof for an importer. But the solution to difficult chief use questions is not to solve them by splitting the class or kind in two, as has heretofore been done in this matter, thereby separating those exemplars in the class which are actually used in accordance with the use described in the pertinent TSUS provision from those which are not. Nor can that result be justified on the basis of the rule that a part is a part of the article it is most immediately a part of rather than a part of the larger article. C.F. Liebert v. United States, 60 Cust. Ct. 677, C.D. 3499 (1968).

The Liebert rule is for determining relative specificity between two competing parts provisions of otherwise equal specificity. It is not a rule for determining the extent of class or kind, but rather is applied after class or kind is first identified. Further, that rule cannot be automatically applied since it has its exceptions. See, for example, Amersham Corporation v. United States, 5 CIT 49 (1983). Our

076760

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

previous decisions identify another exception which we have only applied to part of the class or kind involved and which is based on mechanical distinctions between the different types of jet engines in which compressor blades are used. These distinctions have been set forth in detail in our previous decisions, but put another way, those decisions stand for the proposition that the Liebert rule is not for application if the smaller article, subpart, subsystem, etc., of which an imported part is most immediately a part cannot exist, or never exists, in a configuration whereby, if imported, it would be classifiable under the TSUS provision covering the smaller article.

But having recognized this exception to the Liebert rule for part of the class, it is now our view that an exception should have been made for the entire class. In accordance with the considerations discussed above, one reason for this conclusion is that the facts in the instant matter are distinguishable from the typical situation in which the courts have applied the Liebert rule. In each decision that we are aware of in the line of precedents involved, application of the rule presupposed 100 percent coverage by the provision for the smaller article of the parts involved as a class of merchandise. Where the coverage of the provision for the larger part was not coextensive, it was of less than 100 percent of the parts as a class. Here the situation is just the opposite. It is only the pertinent provision for the larger article which covers the class 100 percent.

076760

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Accordingly, the various rationales given for the Liebert method of determining relative specificity are not shown to be necessarily pertinent here.

But the major reason for not applying the Liebert rule is that that rule, or any other rule, is not for application if the results are not a reasonable extrapolation of legislative intent. See Procter & Gamble Manufacturing Co. v. United States, 19 CCPA 415, 419, T.D. 45578 (1932), concerning the so-called "master rule" of statutory construction. We find that it is not reasonable to conclude that in the original implementation of Title VI of the Trade Agreements Act of 1979, which clearly authorized an exemption from duty for civil aircraft compressor parts, it was intended to withhold the benefits of that exemption for the compressor blades used in one make, model or type of jet engine while allowing the exemption for another. Nor do we believe that realistically any intention can be attributed to those with responsibility for implementing the enabling legislation to create a wide disparity in the tariff treatment of parts which for all practical purposes are the same based on the technicalities by which one jet engine is differentiated from another and on which the protested classification was predicated.

HOLDING:

For the foregoing reasons, we find that the jet aircraft engine compressor blades in question are eligible for the exemption from duty provided for in item 660.73, TSUS. Accordingly, if the record shows that the other conditions for

076760

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

entitlement, which have since become 19 CFR 10.183, have been complied with, the protest should be allowed in full. If those prerequisites have not been satisfied, the protestant should be given written notice, subject to a 60-day time limitation, of the opportunity to supply missing documents, and final action as appropriate should be taken in accordance with the response, or lack thereof, to that opportunity.

Our decision of June 30, 1978, file No. 056362, and our decision of July 7, 1983, IA 49/83, file No. 072289, are modified to the extent they may be inconsistent with the views expressed above. This decision makes a response as to the practice issue raised in this protest unnecessary. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: OCT 31 1986

FILE: CLA-2 CO:R:VC:G
076861 JAS

TO : District Director of Customs
Pembina, North Dakota 58271

FROM : Director, Classification and Value Division

SUBJECT: NOMEX 410 Paper; Internal Advice 40/85

Your memorandum, dated April 11, 1985 (CIA-1-01-CV/LJ:CW), initiated this request for internal advice. Counsel's February 19, 1985, brief has been supplemented by a meeting at Headquarters on June 24, 1986, and a followup brief, dated July 9, 1986. At issue is the tariff classification of the subject paper as well as the applicability of item 806.20, TSUS.

FACTS:

Essentially, NOMEX 410 is produced in the United States from a synthetic aramid polymer in the form of short fibers called flock, and microscopic fibrous binder particles called fibrids. These are combined into a sheet by normal papermaking methods, and wound onto rolls two millimeters thick and 24 inches wide. It is further stated that this product is sent to Canada in mill rolls and there cut to length and width, according to customer specifications, rewound onto smaller rolls, and returned to the United States.

You have proposed to classify this product under the provision for nonwoven fabrics, and articles not specially provided for thereof, of man-made fibers, in item 355.25, Tariff Schedules of the United States (TSUS). Counsel maintains that NOMEX 410 is properly classifiable under the

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

provision for other paper and paperboard, cut to size or shape, not specially provided for, in item 256.30, TSUS, and that the operations in Canada constitute alterations for the purposes of item 806.20, TSUS.

Two classification arguments are presented. First, citing three lexicographic sources defining "paper" as sheets of vegetable, mineral, or synthetic fibers formed as a water suspension and allowed to dry on a fine wire screen, counsel concludes that NOMEX 410 is commonly and commercially known as paper and, therefore, is within the eo nomine provision in item 256.30, TSUS. Dupont's promotional literature consistently refers to the product as "paper." They make both textile and paper products. Further, insofar as use is sometimes a criteria in determining whether a product is within an eo nomine provision, counsel states that NOMEX 410 is primarily used in applications typical of paper, among which is as electrical insulation material because of its high temperature resistance, mechanical toughness, and flexibility. Second, counsel argues that NOMEX 410 is not a nonwoven fabric, because the term "man-made fibers," as defined in Schedule 3, Part 1, Subpart E, Headnote 2(a), TSUS, embraces filaments, among others, covered in that Subpart. Counsel maintains that while flock is arguably a filament, the fibrids are not, because their shape is irregular and filaments must have fairly uniform cross sections throughout their entire length. He then concludes that inasmuch as NOMEX 410 is made in part of particles which are not considered textile fibers for tariff purposes, the product is not a nonwoven fabric, as defined in Schedule 3, Part 4, Subpart C, Headnote 2(b), TSUS, because it is not made entirely of textile fibers.

ISSUE:

(1) Is NOMEX 410 a paper for tariff purposes or is it a nonwoven fabric; (2) Are the provisions of item 806.20 available in these circumstances?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076890

LAW AND ANALYSIS:

With respect to the first issue, a sample of NOMEX 410 was examined by the Customs laboratory on June 11, 1985, and found to consist essentially of nylon fibers impregnated with a plastic material. Ninety percent of the fibers were longer than 4 millimeters with 55 percent being longer than 6 millimeters. The Dictionary of Paper, Fourth Edition (1980), at p. 285, defines "Nonwoven fabric" as "A clothlike material made of fibers longer than those normally used in papermaking which, instead of being woven on a loom, is formed by felting on a fine mesh screen from an air or water suspension with or without binders." Customs has traditionally followed the norm that standard papermaking fibers are normally from 1 to 4 millimeters long whereas nonwoven fabric are generally from 6 to 12 millimeters long. Counsel has cited the Fairchild's Dictionary of Textiles (1970), definition of "non-woven fabrics," at p. 398, which states that normally crimped fibers are used which range in length from 3/4 to 4-1/2 inches in length. This suggests a certain overlap in fiber length with the standard Customs recognizes. Customs recognizes that industry standards change with evolving technology. However, we will continue to follow our standard until a more current industry standard is shown to exist.

The 5th supplemental report to the Tariff Classification Study, dated May 16, 1963, Vol. 2, at p. 859, states, in part, with respect to nonwoven fabrics:

> ***These fabrics often closely resemble paper or paperboard but are distinguishable therefrom by the fact that the textile fibers are not digested in the process of manufacture. Some papers *** do contain textile materials in the form of textile fibers *** which are included to impart a desired characteristic but without destroying the essential character of the product as a paper. *** Such papers will, of course, be classified in Schedule 2.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076861

The Customs laboratory analyst confirmed by telephone that the fibers in the analyzed sample were all of nylon and nylon, of course, does not digest in the normal paper sulfating process. In view of these findings, NOMEX 410 is not classifiable as a paper, in item 256.30, TSUS.

Counsel next contends that NOMEX 410 is not within the Schedule 3, Part 4, Subpart C, Headnote 2(b), TSUS, definition for "nonwoven fabrics" because it is not made of textile fibers. While the term "fibers" includes filaments, among others (Schedule 3, Part 1, Subpart E, Headnote 2(a), TSUS), and flock is arguably a filament, the fibrids are binders and not filaments. Counsel concludes NOMEX 410 is not a nonwoven fabric because it is not made exclusively or entirely of textile fibers. We agree that the pre-existing materials doctrine is not at issue in defining "nonwoven fabrics." The term "made of" for Headnote 2(b) purposes can just as easily be read "made from" or "comprising." NOMEX 410 is therefore a nonwoven fabric for tariff purposes. Because there is no issue presented as to the component material in chief value, we agree that the provision for nonwoven fabrics, and articles not specially provided for, of man-made fibers, in item 355.25, TSUS, represents the proper classification of NOMEX 410.

With respect to the second issue, counsel's argument concerning the applicability of item 806.20, TSUS, is essentially that the slitting of the rolls in Canada constitutes an alteration. Counsel states, however, that there are no administrative or judicial decisions on point, and analogizes to operations considered incidental to an assembly process under item 807.00, TSUS. He contends that the denial of the 806.20 claim in our ruling of June 13, 1984, was not correct. In that case it was held that NOMEX paper cut to width as well as length according to specifications could not

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076861

be considered as merely "altered" under the statute. We pointed out that alterations can be made only on finished articles and that the cutting of a material to meet specifications was precluded from such tariff treatment. The cutting amounted to the final step in a manufacturing process required to produce the imported material in a specific width.

In this case, man-made Nomex material is exported to Canada in 24 inch wide master mill rolls for slitting into widths ranging from 1/2 inch to about 3 inches, and rewound by a special traverse winding process on cores which can accommodate up to 200,000 feet in continuous lengths without splicing, depending on tape width and gauge. For example, three millimeter gauge tape material is slit to one-inch widths and wound on a core to a length of about 6,000 feet. Core tapes are supplied to cable manufacturers for wrapping communication cables by high speed dispensing in ever increasing amounts of tape dispensed from a single package.

The foreign winding process is described as a combination of spiral and traverse turns that interlock the spiral turns to provide solid ends for high speed dispensing. The foreign operation is handled on a multi-head digitally controlled combination slitter and winder capable of simultaneously slitting and winding up to 120 tape packages in one operation from a master roll, in either traverse or step configuration, in single, double, or triple tape packages.

Tapes can be wound single-ply or three-ply in total footage per roll and is limited only by the dimensions of the customer users' equipment. In one illustration, 21 individual tape pads were combined into a single continuous tape.

Item 806.20, TSUS, provides for duty to be assessed upon the cost or value of repairs or alterations made on articles that are exported for that purpose. The application of this tariff provision is precluded where the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076861

F12

foreign operations result in new physical or chemical forms too extensive to be considered a repair or alteration, where the operations result in new or commercially different articles, or where the foreign operations constitute a part of a manufacture that had begun in the United States.

The brochures submitted illustrate how ample stocks of required raw materials are maintained by the foreign processor to ensure prompt completion and delivery of all customer orders. The manufacture of finished goods from raw materials in accordance with customer specifications is not within the contemplation of item 806.20, TSUS. In the described circumstances, the foreign processing of mill rolls of raw materials into finished cable core tapes, ready for end use upon importation, is too extensive a process to be considered an alteration under item 806.20, TSUS.

HOLDING:

NOMEX 410 is classifiable in item 355.25, TSUS, and the provisions of item 806.20, TSUS, do not apply. The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action.

Harvey B. Fox

26 SEP 1986

CLA-2:CO:R:CV:G
076882 JAS

Bernard J. Babb, Esq.
Freeman, Wasserman & Schneider
90 John Street
New York, New York 10038

Dear Mr. Babb:

In your July 24, 1985, letter, you inquire as to the tariff classification of certain steel products from Sweden. A related issue as to the applicability of item 806.30, Tariff Schedules of the United States (TSUS), has been addressed in a separate letter.

You indicate that certain U.S. scrap turnings and solids of nickel based alloy and stainless steel are exported to Sweden and processed into products you refer to as blooms and slabs. Additional materials concerning the tariff status of merchandise you refer to as sheet bars and billets were presented by letter dated April 17, 1986. We will address the tariff status of these products in a separate letter.

You maintain that the blooms and slabs conform to the Schedule 6, Part 2, Subpart B, Headnote 3(b) and 3(c), TSUS, definitions for ingots, blooms, billets, slabs, and sheet bars, all the foregoing of alloy iron or steel, classifiable in item 606.69, TSUS.

The blooms are produced from scrap by the continuous cast method, conditioned by grinding to remove surface defects, and imported into the United States in this condition. After importation they are reheated and rolled into billets, surface ground, annealed, descaled, straightened, cut, and pickled. Slabs produced by the continuous cast method are surface conditioned by grinding and imported in this condition. After importation, these products are cut to corresponding sheet bar weight, reheated and rolled, then annealed, descaled, roller flattened, sheared, stretched, and pickled.

Under the authority of United States v. The Kanthal Corp., C.D. 4644, C.A.D. 118 (1977), you maintain that the described articles are considered "semifinished" products classifiable in item 606.69, TSUS. You state that only after the described post-importation processing operations are completed are these articles capable of being sold and used as plates and bars. Kanthal essentially held that wire rod, a semifinished product, becomes wire, a finished product, by virtue of having been drawn once.

F14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

It is important to note, we believe, that the Kanthal court stated the tariff schedules do not distinguish between products drawn once and those subjected to multiple drawing operations, and that Congress intended such distinction be made on the basis of existing trade practices (citing the Tariff Classification Study, C.I.E. 1/64, Schedule 6, at p. 90).

The Schedule 6, Part 2, Subpart B, headnote 3 definitions for blooms, billets, slabs, and sheet bars refer only to "semifinished" products, without defining the term. Resort to trade practice is therefore extremely relevant. In accordance with The Making, Shaping and Treating of Steel, 10th ed., (1985), published by the Association of Iron and Steel Engineers, at pages 701 and 702, blooms and slabs produced by the continuous casting method may develop a variety of surface defects. These are referred to as semifinished steel mill products. After removal of surface defects by scarfing and grinding (conditioning), these products are converted into finished steel mill products by reheating and further hot working by rolling or forging, coupled in some instances, with cold-working operations that follow the secondary hot working.

Applying these principles to the instant merchandise, it is our opinion that the described blooms and slabs are regarded for tariff purposes as "semifinished" if, after importation, they must be subjected to secondary hot working to achieve the dimensional tolerances, surface condition, or the other usual qualities of finished steel mill products; if they meet the Schedule 6, Part 2, Subpart B, headnote 3(b) and 3(c), TSUS, definitions, they will be classifiable under the provision for ingots, blooms, billets, slabs, and sheet bars, of alloy iron or steel, in item 606.69, TSUS, dutiable at the rate of 5.6 percent ad valorem, plus additional duties on the alloy content. However, if these products, after importation, are to be subjected to secondary hot working to produce a specific final shape or a fabricated end product, they will be regarded for tariff purposes as "finished" and classifiable in Schedule 6, Part 2, Subpart B, TSUS, or in other tariff provisions as appropriate.

Sincerely,

(Signed) Harvey B. Fox

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3004-5-000161

This protest was filed against your decision in the liquidation of various Blaine entries covering shipments of Electrabrite 12 and Electrabrite 18 paper produced in Canada.

This ruling concerns the correct tariff classification of the Electrabrite 12 and Electrabrite 18 paper manufactured by MacMillan Bloedel in Canada.

FACTS:

Counsel for the protestant claims that the instant paper is either classifiable as standard newsprint in item 252.65, Tariff Schedules of the United States (TSUS), or as printing paper in item 252.67, TSUS, by virtue of both its characteristics and its chief use. Regarding the use of the instant paper, counsel for the protestant states that both Electrabrite 12 and Electrabrite 18 are used almost exclusively as computer printout paper. Counsel states that, in almost all cases, after importation the paper is sold in rolls to commercial printers or to forms manufacturers, who prepare the paper for use as computer printout paper by punching holes on both sides. Frequently the forms manufacturers print lines or columns on the paper, as required by the end user.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

62

The merchandise was liquidated under the provision for writing paper weighing over 18 pounds per ream in item 252.75, TSUS. The Blaine import specialist states that the instant papers do not meet the specifications for standard newsprint because of their basis weight. He asserts that both Electrabrite 12 and Electrabrite 18 are writing paper because they are chiefly used for business forms paper.

076947

ISSUE:

Are Electrabrite 12 and Electrabrite 18 classifiable as writing paper in item 252.75, TSUS, as standard newsprint in item 252.65, TSUS, or as printing paper in item 252.67, TSUS?

LAW AND ANALYSIS:

Writing paper is defined, in part, in Headnote 2(d) of Part 4, Schedule 2, TSUS, as follows:

> the term " writing paper" includes, but is not limited to, paper such as ledger, letter, manifold, mimeograph, note, onionskin, tablet, and typewriting papers.

As Headnote 2(d), supra, says, it is not an all-inclusive definition.

Counsel compares certain physical and performance characteristics of the two types of Electrabrite paper with bond paper. He attempts to show by this comparison that neither of the Electrabrite papers is a writing paper because their characteristics are not those of bond paper. While bond paper is one type of writing paper, it is not synonymous with writing paper, as Headnote 2(d), supra, indicates, therefore the fact that bond paper and the two Electrabrite papers have different characteristics does not mean that the Electrabrite papers are not writing paper.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G3

Counsel for the protestant also argues that Electrabrite 12 and Electrabrite 18 are printing papers by virtue of their end use as computer printout paper. As far back as Treasury Decision 72-207, 6 Cust. Bul. 379 (1972) (T.D. 72-207), however, paper intended for use as forms paper or as computer paper has been held by the Customs Service to be chiefly used as writing paper. In T.D. 72-207, we found that the paper at issue there was a "writing paper for conversion into computer output forms and business forms" and that it was "commercially designated as writing paper by the paper industry within the United States." The paper in T.D. 72-207 was classified as a writing paper in item 252.75, TSUS. We note that the end use in T.D. 72-207 is the same as the end use of the instant Electrabrite 12 and 18.

In Customs Headquarters Ruling Letter (HRL) 065371, dated October 30, 1980, we considered the classification of a paper chiefly used for "making computer printout forms for recording data by pen, pencil, typewriter, or similar device. The only printing done on the paper is lines, space column headings, and incidental text." We found that, although the composition of the paper's stock differed from that in T.D. 72-207, the end use was the same (i.e., writing paper), therefore the paper was held to be classified as writing paper in item 252.75, TSUS. Once again, we note that the chief use of the paper at issue in HRL 065371 and the instant paper are one and the same.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076647

64

In HRL 074564 of November 26, 1984, we considered the classification of a paper which was chiefly used for business forms paper. We held that such paper was classified as writing paper in item 252.75, TSUS.

Finally, in HRL 074560, dated October 9, 1984, we considered the tariff classification of both Electrabrite 15 (not at issue in the instant protest) and Electrabrite 18 (one of the two papers at issue here). While we found that Electrabrite 15 was part of the class or kind of paper chiefly used in the United States as standard newsprint, as specified in Treasury Decision 68-265(20), 2 Cust. Bul. 598 (1968) (T.D. 68-265(20)), we found that Electrabrite 18 did not meet the requirements for standard newsprint because of its basis weight. Inasmuch as Electrabrite 18 was found to be chiefly used as business forms paper, we found that Electrabrite 18 was classified as writing paper in item 252.75, TSUS.

Inasmuch as Customs has ruled previously that paper chiefly used as computer printout paper or as business forms paper is writing paper, we find that the chief use of both Electrabrite 12 and Electrabrite 18 is as writing paper, not printing paper.

Counsel for the protestant has also claimed that the two Electrabrite papers at issue are classifiable as standard newsprint in item 252.65, TSUS. The specifications for standard newsprint are set forth in Treasury Decision 56349,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

076947

100 Treas. Dec. 33 (1965) (T.D. 56349) and in T.D. 68-265(20). As we noted in HRL 074560, Electrabrite 18 does not meet the specifications for standard newsprint because of its basis weight, 65 grams per square meter, which equals 39.9 pounds per Customs ream (i.e., 500 sheets, 24 inches by 36 inches). T.D. 68-265(20) specifies that the basis weight for standard newsprint is not less than 28-1/2 pounds nor more than 35 pounds per Customs ream.

The basis weight for Electrabrite 12 is 42 grams per square meter, or 25.8 pounds per Customs ream. This means that the basis weight of Electrabrite 12 is too light for standard newsprint, therefore neither Electrabrite 12 nor Electrabrite 18 can qualify as standard newsprint because of their basis weights.

Inasmuch as Electrabrite 12 and Electrabrite 18 cannot qualify as standard newsprint because of their basis weights and inasmuch as both papers are chiefly used as computer printout paper, which is a writing paper use, we find that both Electrabrite 12 and Electrabrite 18 are classified as writing paper, in item 252.75, TSUS.

HOLDING:

Electrabrite 12 and Electrabrite 18 are classified as writing paper in item 252.75, TSUS. The protest should be denied in full.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

You should send a copy of this letter to the protestant along with the CF 19 Notice of Action.

Sincerely,

William P. Schoffler

Arthur T. Morgan
Spencer Clark Metal Industries, Inc.
17066A South Park Avenue
South Holland, Illinois 60473

Dear Mr. Morgan:

In your letter of May 21, 1985, you requested a ruling on the classification of certain steel products. In a ruling letter of September 26, 1985 (file 813869), the issue concerning "semifinished" was reserved for further consideration by this office. This letter responds to that question.

Attached is a copy of a ruling letter dated September 26, 1986 (file 076882), which provides guidance on what steel products will be considered "semifinished" for purposes of tariff classification. The products in that case were continuous cast alloy steel products that had been surface conditioned. These products, after importation, had to be further hot worked into basic steel mill products.

You describe the material to be imported as "semifinished" products in widths of approximately 18 inches to 36 inches, with lengths of 36 inches to 123 inches and thicknesses of approximately 1/16 inch to 1-1/2 inches. These products are hot rolled or hot rolled and annealed.

The imported products will be processed by cutting to specific lengths and widths, surface grinding of top and bottom to a thickness tolerance of $\pm$ .001 inch and edge grinding to a width tolerance of + .005 inch to - .000 inch. This operation removes the surface defects as well as the decarburization layer. The ground product is then coated with a corrosion inhibitor and is distributed as precision ground flat stock for use in constructing dies, jigs, fixtures, cutting instruments, and numerous other precision articles.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G8

Absent evidence to the contrary, the product as imported by you would not require further hot working to form a finished steel mill product. Therefore, we classify the stainless steel products under the provision for plates and sheets of iron or steel, not cut, not pressed, and not stamped to nonrectangular shape, not coated or plated with metal and not clad, not pickled and not cold rolled, stainless steel, in item 607.76, Tariff Schedules of the United States.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Atlanta, Georgia 30342

Dear Mr. Mueller:

Your letter of June 28, 1985, was forwarded to us by our New York office for our response.

Enclosed is a copy of a ruling dated September 26, 1986 (file 076882), concerning whether or not certain continuous cast steel products were "semifinished" for purposes of classification as blooms, billets, slabs, or sheet bars. This ruling is instructive with regard to the H-13 steel products for which you request a classification ruling.

The merchandise is described by you as H-13 tool steel rounds, 7 to 24 inches in diameter, rough forged to size, heat treated, and which are specified for applications involving subsequent cold forming by turning or hot forming by forging.

From this description, we conclude that the H-13 tool steel rounds have been forged to a specific dimension and do not require further hot working to reduce in dimension or to form a finished basic steel mill product. Therefore, absent evidence to the contrary, these tool steel rounds are classified as other bars of tool steel in item 606.95, Tariff Schedules of the United States.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

813900 NY

Mr. Rowland Maddison
Sammisa (America) Corporation
15881 Chemical Lane
Huntington Beach, California 92649

Dear Mr. Maddison:

Your letter of May 21, 1985, was forwarded to us by our New York office for our response.

Enclosed is a copy of a ruling dated September 26, 1986 (file 076882), concerning whether or not certain continuous cast steel products were "semifinished" for purposes of classification as blooms, billets, slabs, or sheet bars. This ruling is instructive with regard to the various grades of tool steel for which you request a classification ruling.

The merchandise is described by you as specialty steel AISI H-13, A-2, D-2, 01, and 57, in either "as forged" or "as rolled" condition. The "as forged" has a circular cross section with diameters from approximately 5.5 inches to 16 inches, and in lengths of 72 inches to 160 inches. The "as rolled" is rectangular, having a width of 16 inches, a thickness from 1 to 4 inches, and a length of over 80 inches.

According our New York office, the "as forged" rounds are forged from ingots and do not require a secondary hot working for the purpose of reducing them in dimension or to form a finished basic steel mill product. These rounds are either forged into specific components or are cut and machined into articles. The "as rolled" products are the product of a secondary hot working and do not require any further hot working.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

G11

Therefore, absent evidence to the contrary, the tool steel products described by you are classified as follows: the forged rounds as other bars of tool steel in item 606.95, Tariff Schedules of the United States (TSUS), and the rolled shapes as other plates of tool steel in item 607.72, TSUS.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Dear Mr. Kobayashi:

Your letter of April 10, 1985, was forwarded to us by our New York office for our response.

Enclosed is a copy of a ruling dated September 26, 1986 (file 076882), concerning whether or not certain continuous cast steel products were "semifinished" for purposes of classification as blooms, billets, slabs, or sheet bars. This ruling is instructive with regard to the H-13 steel products for which you request a classification ruling.

The merchandise is described by you as AISI H-13 tool steel rounds, 8 to 25 inches in diameter, rough forged to size, and saw-cut or flame-cut to lengths of 6 to 12 feet. You state that the products, after importation, will be either ground or turned to specific dimension, and then sliced into discs for the manufacture of dies, molds, and tooling.

From this description, we conclude that the H-13 tool steel rounds have been forged to a dimension and do not require further hot working to reduce in dimension or to form a finished basic steel mill product. Therefore, absent evidence to the contrary, these tool steel rounds are classified as other bars of tool steel in item 606.95, Tariff Schedules of the United States.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Dear Mr. Kobayashi:

Your letter of May 2, 1985, was forwarded to us by our New York office for our response.

Enclosed is a copy of a ruling dated September 26, 1986 (file 076882), concerning whether or not certain continuous cast steel products were "semifinished" for purposes of classification as blooms, billets, slabs, or sheet bars. This ruling is instructive with regard to the various grades of tool steel for which you request a classification ruling.

The merchandise is described by you as alloy steel in grades similar to AISI 4340 and 4330 (low alloy steel) and AISI SI5500 (stainless steel). They will be forged products with a circular cross section. Prior to importation they will have been heat treated and rough turned to required dimensions. These products will be used in the manufacture (forging) of components for aircraft landing gear. Processing after importation will involve cutting to length, heating, hot forging to configuration, heat treatment, and machining to final dimension.

Rough turning to specific dimension is a cold forming operation. See enclosed copy of a ruling dated March 12, 1980 (file 061709), in which we held that the tariff term "cold forming" included rough turning. The rough turning performed on your alloy steel rounds is a cold forming operation for U.S. tariff purposes.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A3

Therefore, absent evidence to the contrary, the alloy steel and stainless steel products described by you are classified as follows: the alloy steel rounds as other bars of alloy steel, cold formed, in item 606.99, Tariff Schedules of theUnited States (TSUS), and the stainless steel rounds as bars of stainless steel in item 606.90, TSUS.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

CLA-2:CO:R:CV:G
077127 JCH

District Director of Customs
477 Michigan Avenue
Detroit, Michigan 48226-2568

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 38015001456

The above-captioned protest and application for further review were filed against your classification of merchandise which was the subject of entries filed at the port of Detroit in 1984. This merchandise is a product of Canada. Our decision follows:

FACTS:

The merchandise consists of electrical items variously classified by Customs officers under the provision for rectifying apparatus and inductors in item 682.60, Tariff Schedules of the United States (TSUS), and the provision for transformers rated at less than 1 kva in item 682.05, TSUS. The column 1 rates of duty required under these provisions in 1984 were 4.7 and 8.8 percent ad valorem respectively. It is contended the merchandise is classifiable under the provision for transformers rated at 1 kva or more in item 682.07, TSUS, which required a column 1 rate of duty in 1984 of 3.8 percent ad valorem. As will be shown infra, this provision has been interpreted by the court to also cover so-called unrated transformers.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

[redacted]
A6

677127

ISSUE:

The merchandise consists of Part No. 125350 variously referred to as a neutral grounding reactor and tingle voltage filter, Part No. 123276 referred to as a rectifier transformer, and Part Nos. 113340 and 124604 referred to as constant voltage transformers. The tingle voltage filter is used in farm building electrical service applications to isolate the incoming and building neutral from the building ground to filter out stray currents from various sources or causes which may give a shock to farm animals touching equipment which is otherwise grounded.

The remaining equipment is used on computer main frames to step down the main power supply to given tap requirements.

LAW AND ANALYSIS:

While the tingle voltage filter is described as a static magnetic device similar to a transformer, its primary purpose is to oppose stray currents through reactance induction. Accordingly, it is not a transformer, but rather constitutes a reactance inductor.

With respect to the rectifying transformers, it is well established that electrical devices which incorporate rectifying apparatus are classifiable in accordance with that feature even though the voltage of the input AC or DC current is different from that of the output AC or DC current.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A7

It has also been our position that transformers may not be regarded as unrated if they are of a class or kind which are rated or are for uses in power circuits where the capacities of the transformers must be known even if they are not included on any lables. For example, in many computer applications of the type described it is typical for the secondary circuit to be rated at 5 volts and the primary circuit to be rated at 120 volts. It is not shown that the power requirements of the transformers at issue would vary significantly from these types of requirements. In our opinion, transformers in power applications represent a different class of merchandise than the baluns used in television antenna applications which were the subject of United States v. RMS Electronics, Inc., 67 CCPA 79, C.A.D. 1249 (1980), and which were held to be "unrated" transformers classifiable under item 682.07.

HOLDING:

For the foregoing reasons we find that the tingle voltage filters and the rectifying transformers were properly classifiable under the provision for inductors and rectifying apparatus in item 682.60, TSUS, and that the constant voltage transformers were properly classifiable under the provision

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A8 [redacted]

for transformers rated at less than 1 kva in item 682.05, TSUS. Therefore, the protest should be denied in full and a copy of this decision attached to the Form 19 Notice of Action.

Sincerely,

Arthur P Schaffner

Re: Decision on Protest and Application for Further Review
No. 2904-5-000189, Dated May 24, 1985

Dear Sir:

The above protest and application for further review were timely filed by Highcity International of San Anselmo, California, against your action in classifying a yacht suit and its tote bag container as an entirety under item 376.56, Tariff Schedules of the United States (TSUS), as garments designed for rainwear, hunting, fishing or similar uses, wholly or almost wholly of fabrics which are coated or filled, or laminated, with rubber or plastics, which (after applying Headnote 5 of Schedule 3) are regarded as textile materials: other. The merchandise, which is made of PVC-coated nylon material, was entered under Consumption Entry No. 85-419580-2, dated October 2, 1984.

FACTS:

The articles in question are a tote bag and a yacht suit comprised of a pair of pants and a jacket. The tote bag is made from a PVC-coated nylon woven fabric. The pants and jacket are made from a coated knit nylon fabric. All exterior surfaces consist of a plastic coating that has been calendered to create a weave effect. The fabric is approximately 30 percent nylon and 70 percent plastic. The yacht suit is packed inside the tote bag and all three articles (bag, pants, and jacket) are sold as a single unit.

The tote bag has a zippered opening and two carry handles comprised of the same coated fabric. The jacket is hooded and zippered. A weatherproof strip of nylon covers the zipper and is secured with a Velcro-type closure. The jacket has fold-over pockets, also with Velcro-type closures. Coated or filled reflective stripes appear on the pockets. The pants are of a chest-high bib style with a waterproofed fly front. They have plastic suspender holders. The suspenders are of a webbed fabric and have plastic buckles. The pants have a fold-over pocket with a Velcro-type closure. A coated emblem appears on the pocket.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

[redacted]
NO

The protestant entered the tote bag, jacket and pants as an entirety, classifiable as wearing apparel (including rainwear), not specially provided for, of rubber or plastics, under item 772.30 (now item 772.31), TSUS, dutiable at the then applicable rate of 8.8 percent ad valorem.

On January 22, 1985, Customs issued a CF-29 Notice of Action to the protestant, indicating a rate advance and reclassifying the yacht suit under item 376.56, TSUS, as garments designed for rainwear, hunting, fishing or similar uses, wholly or almost wholly of fabrics which are coated or filled, or laminated, with rubber or plastics, which (after applying Headnote 5 of Schedule 3) are regarded as textile materials: other, dutiable at the then effective rate of 12.1 percent ad valorem. The Notice stated that the tote bag was considered to be an ordinary container and not separately classifiable. It also noted that the yacht suits had fabric strips on the outside pocket flaps and therefore were classified as rainwear of man-made fabric.

In a letter of February 5, 1985, the protestant responded to the Notice of Action, dwelling on the issue of the fabric strips. Customs informed the protestant that he could request resolution of the classification issue under Internal Advice procedures or wait until liquidation and file a protest. The entry was liquidated at the higher rate on April 19, 1985. The protest was then timely filed.

ISSUES:

Are the yacht suit, comprised of the jacket and pants, and its tote bag container classifiable as an entirety?

Is the yacht suit classifiable as wearing apparel of rubber or plastics under item 772.30, TSUS, or as garments designed for rainwear, wholly or almost wholly of fabrics which are coated or filled, or laminated, with rubber or plastics, under item 376.56, TSUS?

LAW AND ANALYSIS:

General Headnote 6(b)(iii), TSUS, provides that "all other containers or holders are subject to the same treatment as specified in (ii) above for usual or ordinary types of shipping or transportation containers designed for or capable of, reuse." Headnote 6(b) states that these containers which are capable of reuse are subject to treatment as "imported articles separate and distinct from their contents."

071139

A11

RELEASED TO THE

The subject tote bag is clearly a reusable container. It is very similar to other tote bags which are sold over the counter without contents. There are no distinguishing features about this tote bag which would lead one to conclude that it is usually sold at retail with its contents. Accordingly, we find that the tote bag and yacht suit are separate and distinct articles which must be classified separately.

Headnote 5, Schedule 3, of the 1984 TSUS, (now Headnote 5(a)), provided that for purposes of certain parts of the tariff schedules:

> [I]n determining the classification of any article which is wholly or in part of a fabric coated or filled, or laminated, with nontransparent rubber or plastics (which fabric is provided for in Part 4C of this schedule), the fabric shall be regarded not as a textile material but as being wholly of rubber or plastics to the extent that (as used in the article) the nontransparent rubber or plastics forms either the outer surface of such article or the only exposed surface of such fabric.

Pursuant to this language, the surface character of the fabric governs its tariff classification. See Customs Ruling Letters of August 15, 1984 (Control No. 074686) and June 3, 1985 (Control No. 076069).

In its Report on the Tariff Schedules Technical Amendment Act of 1965, the House Ways and Means Committee distinguished between: (1) products in which the "textile" surface of the fabric formed the outer surface of the article, thereby lending to the articles the essential characteristic of a woven or knit fabric, and (2) those products where the textile surface is hidden or buried so that it is only the rubber- or plastic-coated surface which gives character to such finished products. The definition of "textile materials" was meant to exclude those products where nontransparent rubber or plastics forms either the outer surface or the only exposed surface of the fabric. H.R. 342, 89th Cong., 1st Sess. 12 (1965). Fabric will be considered nontransparent if the coating obscures the textile fibers or yarns so that they cannot be seen and eliminates the textile surface character of the fabric. C.S.D. 79-82.

A12

THIS DOCUMENT MAY BE RELEASED TO THE

In the subject articles, the underlying yarns cannot be seen because they are obscured by the PVC coating. The coating, therefore, can be considered nontransparent for classification purposes. Textile surface characteristics are eliminated by the coating. In accordance with the language of Headnote 5, Schedule 3, and the legislative history of the provision, the subject yacht suit and tote bag are classifiable as articles of rubber or plastic.

Customs Ruling of August 15, 1984, supra, has been cited as support for the proposition that the passing of light through a plastic-coated fabric renders that coating transparent for classification purposes. The fact that vague figures can be discerned when something is placed against the opposite surface of a fabric does not affect a determination that a plastic coating is nontransparent. See C.S.D. 79-82, supra. Concomitantly, the mere passage of light through a plastic-coated fabric cannot dictate, per se, that the coating be considered transparent if the underlying fibers cannot be seen.

Customs Ruling of August 15, 1984, supra, involved classification of a nylon rainsuit covered with a plastic coating through which underlying fibers could be seen when light was applied thereto. The ruling found that the coating was, per se, transparent This portion of the ruling is an erroneous interpretation of C.S.D. 79-82.

HOLDING:

We find that the yacht suit, including pants and jacket, is properly classifiable under item 772.30, TSUS, as wearing apparel (including rainwear), not specially provided for, of rubber or plastics, dutiable at the 1984 rate of 8.8 percent ad valorem.

The tote bag is most properly classifiable as luggage, of other material: other, under item 706.62, TSUS, dutiable at the rate of [illegible] percent ad valorem.

The classification of the tote bags is not the claimed provision or the assessed provision. Because the rate of duty under the correct classification is more than the rate under either the claimed provision (item 772.30) or the assessed provision (item 376.56), the protest as to the tote bags should be denied. The protest as to the yacht suits should be granted.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

071139

A13

Customs Ruling of August 15, 1984 (Control No. 074686), is overruled insofar as it holds that a plastic coating is transparent merely because light passes through the plastic-coated fabric.

A copy of this letter should be provided to the protestant when notice of action is given on Customs Form 19.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

District Director of Customs
909 First Avenue
Seattle, Washington 98174

Re: Decision on Protest and Application for Further Review of Protest No. 3001-5-000022, dated January 7, 1985

Dear Sir:

The above protest and application for further review of protest were timely filed against your action in classifying an electrical article as a flashlight in item 683.70, Tariff Schedules of the United States (TSUS), and, consequently, assessing duty on a set, of which the article is one item, at the rate for the flashlight. The merchandise was entered at Seattle on Entry No. 84-204954-6, dated June 27, 1984, and liquidated on November 9, 1984. This ruling is our decision.

FACTS:

The article in issue is described as a combination continuity tester and flashlight, and is one of 40 items in a kit. It is a tubular article, of metal, approximately 5-3/4 inches long and 5/8 inch in diameter, having an angled tip. It operates on two AA batteries as a flashlight (with a lens-end bulb) for illuminating small areas, and has a pocket clip so that it can be conveniently carried when not in use. The flashlight is designed with a receptacle for a banana plug so that it can be joined to a wire and used to check various electrical circuits for shorts or continuity. A spring-like metal clip, extending from the metal contact in the plug receptacle, operates to turn on the flashlight when pressed down to contact the external casing.

[redacted]
B1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

When connected with a wire, the tip of the flashlight casing and the unattached end of the wire become the two ends of the circuit tester. When the casing and the wire are touched at different locations on a circuit, the flashlight bulb will glow if a circuit is completed. The kit includes two wires, each of which has a banana plug on one end and an alligator clip on the other.

ISSUE:

Is the flashlight "more than" a flashlight because it has a circuit continuity test function?

LAW AND ANALYSIS:

The relative simplicity, apparent insignificance, or infrequent use of one function does not necessarily lead to the conclusion that the function is subsidiary, subordinate, and incidental to another more common and recognizable function. In The Ashflash Corporation v. United States, 76 Cust. Ct. 112, C.D. 4643 (1976), the court held that a portable electric lantern with an illumination function and a signal-warning red flasher was a multifunction article and, therefore, more than a portable electric lamp. In that case the court noted that the signal-warning function was a separate and identifiable function.

This article, as designed, is a flashlight which can be easily adapted as a circuit tester. It only requires the attachment of an accessory electrical wire to provide a movable test point. Any wire, such as either of the wires

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B2

included in the kit, will permit use of the flashlight as a circuit tester.

However, without an accessory wire, the article is merely a flashlight which has been designed so that the external casing and the spring-like clip or "switch" form parts of the flashlight circuitry. This is not unusual for such a simple design. The presence of the plug receptacle merely facilitates adaptation of the flashlight as a circuit tester.

The wire and the flashlight cannot be considered entireties which form a new article, i.e., a combination flashlight and tester, because they retain their separate identities. Silvine Importer, Inc. v. United States, 57 Cust. Ct. 362, C.D. 2821 (1966).

HOLDING:

The electrical article is designed as a flashlight and its principle function is as a flashlight. The design permits use as a circuit tester, but this is a secondary and subordinate function that is adapted from its principle function as a flashlight. It is classifiable as a flashlight in item 683.70, TSUS. The protest should be denied in full. A copy of this decision should be given to the protestant when notice of action is given on Customs Form 19.

Sincerely,

Arthur V Schaffer

CLA-2:CO:R:CV:G
077209 JCH

077209

District Director of Customs
610 South Canal Street
Chicago, Illinois 60607

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 39015000887

The above-captioned protest and application for further review were filed against the tariff classification of a fiber optic and electrical conductor combination (referred to by the manufacturer as a fibral earth conductor) which was the subject of entry No. 85-710228-7 filed at the port of Chicago in 1984. This merchandise was a product of the United Kingdom. Our decision follows:

ISSUE:

The merchandise was classified under the provision for mounted optical elements in former item 708.29, Tariff Schedules of the United States (TSUS). The 1984 column 1 rate of duty required under that provision was 13.1 percent ad valorem. The protestant contends the merchandise is properly classifiable under the provision for electrical conductors with fittings in item 688.15, TSUS. The 1984 column 1 rate of duty required under that provision was 5.8 percent ad valorem.

FACTS:

The merchandise consists of several separately sheathed fiber optic conductors forming a cable within an aluminum alloy tube. The tube serves as the core for a galvanized steel strand conductor which may consist of one or more plies

[redacted]
B4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

depending on the required electrical characteristics. The particular version of the product in question is typically used in long-distance power transmission systems. It allows the ground conductor normally used to be replaced by the instant merchandise to add a fiber optic transmission capability to a preexisting power transmission system without altering its electrical, aerodynamic, etc., characteristics.

LAW AND ANALYSIS:

Our previous classification of fiber optic cables as optical elements is not open to question at this time in view of the ratification of that position by the creation of the new specific breakout for fiber optic cables in item 707.90, TSUS, with the same rate of duty they would have if they remained classifiable under the applicable optical elements provisions. Nor can any consideration be given to the argument that item 688.15, when describing merchandise also described by item 707.90 and its predecessors, must prevail. Headnote 1(vi), Part 5, Schedule 6, TSUS, where item 688.15 appears, excludes electrical apparatus provided for in Schedule 7, TSUS, where item 707.90 appears.

Therefore, the only question for consideration here is whether the instant merchandise is actually excluded from the optical elements provisions because it is "more than" optical elements. However, the "more than" rule is not for applica-

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B5

077209

tion, even if the value of the components giving merchandise an additional function are significant in relation to the value of other materials, when the added feature actually does nothing more than amplify or enhance the function of the feature otherwise controlling classification. See, for example, Robert Bosch Corp. v. United States, 63 Cust. Ct. 96, C.D. 3881 (1969). The wire strand material within which the instant fiber optic conductors are encased provides a necessary lightning and other hazard protection and strengthening function without which the fiber optic conductors could not be used in long-distance overhead power transmission applications. While it is true the ground conductor feature also provides ground fault protection for the entire system in which it is used, submissions with the protest show that the electrical capacity of the conductor when used in the instant type of application is no different than the capacity of any metal conductor otherwise used to support an overhead fiber optic line.

Therefore, it is our opinion that the configuration of the instant combination cable which allows for more efficient use of the ground conductor feature does not make the merchandise more than a metal conductor and fiber optic combination line in a configuration where the metal conductor only provides protection for the fiber optic cable itself.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077209

HOLDING:

For the foregoing reasons, we find that fiber optic conductors when combined with a wire strand ground conductor for strengthening and ground fault protection remain classifiable as optical elements, and that the provision for mounted optical elements in former item 708.29, TSUS, was the correct classification for the instant merchandise. Therefore, the protest should be denied in full. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant. The Form 19 is returned herewith.

Sincerely,

Arthur P Schaffner

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON, D.C. 20229

OCT 9 1986

CLA-2:CO:R:CV:G
077267 JAS

District Director of Customs
Patrick V. McNamara Bldg.
477 Michigan Avenue
Detroit, Michigan 28226-2568

Dear Sir:

This is our decision on Application for Further Review of Protest No. 3801-5-001821, dated April 30, 1985, filed on behalf of Westinghouse Canada, Inc. It covers 9 entries, dated November 26 and 30, December 6, 10, 12, 21, and 27, 1984, and February 4 and December 19, 1985. The entries were liquidated February 1, 8 and 22, and March 1, 1985.

FACTS:

The merchandise at issue is the W1642 Westinghouse Microprocessor-based CRT Terminal. The first major component is the terminal's modular display unit which consists of a small microprocessor board, 12 in. CRT, and a power supply chassis. The other major component is the programmable keyboard which permits data to be entered, deleted, or otherwise edited, either by the standard alphanumeric keys or by pressing certain special function keys. Transmission of a message is initiated by pressing the transmit key. A related printer is not part of the protested entries. The W1642 is advertised for use in reservation systems, load control, check-in, baggage tracing and ticketing operations, and cargo handling. The instant units, the subject of this protest, are sold primarily to airlines for use in reservation and ticket processing applications.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

You have liquidated the concerned entries under the provision for accounting, computing, and other data-processing machines, in item 676.15, Tariff Schedules of the United States (TSUS), because they are essentially machines which process data and incorporate a calculating mechanism as required by the superior heading to items 676.15 through and including 676.25.

Protestant maintains that the subject machines come equipped with erasable, programmable, read-only memory (Eprom), which is not a calculating "mechanism" for tariff purposes because of its solid state circuitry. Additionally, protestant maintains the calculating function is subsidiary to the overall data-processing function of the W1642. Classification in item 676.30, TSUS, as office machines not specially provided for, is proposed because there is no requirement that item 676.30 merchandise incorporate a calculating mechanism.

ISSUE:

Does the W1642 incorporate a calculating mechanism for tariff purposes, and must it be the primary feature of the machine?

LAW AND ANALYSIS:

With respect to the first issue, Schedule 6, Part 4, Subpart G, Headnote 2(c), TSUS, which governs entries under item 676.15, defines "calculating mechanism" as one designed

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B9

[redacted]

017129

to perform one or more of the four arithmetical calculations, but does not define the scope of the word "mechanism". The record indicates that the Eproms in the W1642 series permit calculations to be performed off-line. There is nothing in the common meaning of the word "mechanism" which would definitively require mechanical capability, as protestant appears to contend. Moreover, the issue of whether Eproms are calculating mechanisms for item 676.15 purposes is currently in litigation before the United States Court of International Trade. We are informed that no decision has yet been rendered in this case. Consequently, we will adhere to Customs longstanding position that machines which calculate electronically incorporate a calculating mechanism for tariff purposes.

With respect to the second issue, protestant maintains that the overall commercial function of the W1642 is not markedly enhanced by the presence of a calculating "mechanism" because the W1642 is considered a slave terminal, up to 48 of which can be controlled by a master terminal. Presumably, only the calculating capability of the master terminal would be considered commercially significant.

There is no requirement that the machines classifiable in item 676.15 be used principally as calculating machines, only that they incorporate a calculating mechanism. Notwithstanding evidence in the contract of sale that the buyer specifically requested the calculating feature be included in

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

B10

076267

the W1642 (which would be an indication of commercial significance), and the W1642's limited programmability, the processing of information appears to be the principal use to which this unit is put.

HOLDING:

The W1642 is provided for under the provision for computing and other data-processing machines, in item 676.15, TSUS.

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Slaughter

OCT 21 1986

CLA-2 CO:R:CV:G
077294 jlj

Area Director of Customs
JFK Airport, Building 178
Jamaica, New York 11430

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-5-008905

This protest was filed against your decision in the liquidation on April 12, 1985, of entry No. 85-336026 dated March 1, 1985, covering a shipment of ladies' 100 percent cotton woven high waisted jeans with belts manufactured in Hong Kong.

This ruling concerns whether or not these jeans are ornamented for tariff purposes.

FACTS:

The merchandise at issue is ladies' 100 percent cotton woven high waisted jeans with belts, style No. 1124 HS. The belts have appliques on them. The "high waisted" aspect of the jeans is caused by the insertion of a strip of fabric, approximately 1-1/2 to 1-3/4 inches in width, into the open seam of the waistband just above the belt loops. The extra strip of fabric continues the jeans above the belt loops and around the waistline.

The protestant claims that the high waisted jeans with belts are classified under the provision for other women's wearing apparel, not ornamented, of cotton, not knit, other, other, trousers and slacks, in item 383.47, Tariff Schedules of the United States (TSUS).

B12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

The JFK import specialist liquidated the entry under the provision for other women's wearing apparel, ornamented, of cotton, other, not knit, trousers and slacks, denim, in item 383.06, TSUS.

ISSUE:

Does the insertion of an extra strip of material in the waistband make these high-waisted jeans ornamented for tariff purposes?

LAW AND ANALYSIS:

Counsel for the protestant argues that the high waist on the jeans is not ornamental, citing Brittania Sportswear v. States, 5 CIT 212 (1983), and United States v. Endicott Johnson Corp., 67 CCPA 47, C.A.D. 1242 (1980) in support of his position. He claims that the high waist is not decorative because it is from the same material and is the same color as the trousers.

He argues that the high waist is functional in that it is an integral part of the trousers and finishes the high waisted garment. He claims that the jeans are designed especially for high waisted individuals and are intended to provide a particular type of fit. He cites Blairmoor Knitwear Corp. v. United States, 60 Cust. Ct. 388, C.D. 3396 (1968) and Paramount Bead Corp. v. United States, 19 CCPA 385, T.D. 45522 (1932) in support of his contention that the high waist is functional.

077294

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B13

He asserts that the high waist is not piping. (We note at this point that the national import specialist says that she made an analogy and compared the extra strip of fabric in the high waist to piping. It is not Customs' position that the extra strip of fabric in the high waist actually is piping.) He cites C.S.D. 79-214, the Summaries of Trade and Tariff Information, volume 6, page 48 (1984) and Rifkin Textiles Corp. v. United States, 55 Cust. Ct. 341, C.D. 2600 (1965) in support of this point.

In a supplemental petition dated April 18, 1986, counsel makes other arguments. Once again he argues that the high waist is intended for high waisted individuals who are trying to avoid the hip hugger look. We note that illustrations submitted with the protest show (and counsel admits) that the height of the high waisted jeans is the same as the height of regular jeans.

He argues that the high waisted feature must be made from a second piece of fabric in order to avoid the folding which would result if the high waistband was of one piece.

Counsel cites Customs Headquarters Ruling Letter (HRL) 052878 of September 1, 1978, and New York letter 801287 of September 10, 1981, in support of his proposition that when a functional feature, such as a pocket, is constructed of two or more pieces, it is non-ornamental. Both HRL 052878 and New York letter 801287 dealt with pockets which were made of several pieces and which were found to be not ornamented. Both

077294

B14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

letters are distinguishable, however, because the pockets would not have been complete without all of their pieces. The instant jeans would be complete garments even without the extra strip of material added at the waist.

He claims that the split in the rear of the high waistband is necessary in order to impart "give" to the high waist and that the high waist would be uncomfortable if it went continuously around the waist.

Counsel cites Britannia Sportswear, supra, and Endicott Johnson, supra, in support of his contention that the extra strip does not constitute ornamentation. Britannia Sportswear concerned a small, inconspicuous and unobtrusive loop, while Endicott Johnson concerned a non-contrasting stitching which was not readily visible. Neither case is relevant here. As counsel notes, the strip in question is 1-1/2 to 1-3/4 inches in width. It encircles the entire waistband, meeting in the center front and rear in a mandarin collar effect. The strip (or the two strips, since there are mandarin-collar type splits in front and back) is readily visible, conspicuous, and -- unlike the features in the cited cases -- creates a highly decorative effect.

Counsel cites Blairmoor and contends that the strip is primarily functional because it is an integral part of the jeans and finishes them. The removal of the strip in no way affects the integrity of the garment, however, because the waistband is finished without the strip. If the strip is removed, what is left is an ordinary finished faced waistband without the decorative effect imparted by the strip.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077294

Counsel argues that the strip creates a high waist which is designed to provide a certain sort of fit (i.e., for high waisted women). Fit is not determined by a strip of fabric inserted in the edge of the waistband, however, but by the depth of the rise relative to the waist. As we noted above, counsel admits and illustrations submitted with the protest show that the height of the high waisted jeans is the same as the height of regular jeans.

A belt with an applique on it is imported along with the jeans. Counsel contends that inasmuch as the belt may be worn with other items, the ornamented belt should not cause the jeans (which are imported and sold with the belts) to be classified as ornamented. This line of reasoning is not valid, however. If that line of reasoning was followed, a tucked suit jacket, an embroidered pajama top or a karate top with a decorative textile label imported as parts of suits, pajamas or martial arts uniforms respectively would never be classified as ornamented because their components could be worn with other items or alone.

While the belt is functional and holds up the pants, the applique on the belt ornaments both the belt and the jeans of which the belt is a part.

To summarize, the strip of fabric inserted in the finished waistband of the jeans creates a decorative appearance, serves no structural function on the jeans, and constitutes ornamentation within the meaning of Headnote 3(a)(iii) of Schedule 3, TSUS. The oval applique on the belt constitutes C2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077294

ornamentation whether the belt is imported alone or as part of the pants. The high waisted jeans are properly classified under the provision for other women's wearing apparel, ornamented, of cotton, trousers and slacks, denim, in item 383.06, TSUS.

HOLDING:

The high waisted jeans are ornamented and are classified in item 383.06, TSUS. The protest should be denied in full. A copy of this letter should be sent to the protestant along with the Customs Form 19 Notice of Action.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

OCT 21 1986

REFER TO

CLA-2 CO:R:CV:G
077313 JAS

District Director of Customs
6th Floor, Plaza Nine Bldg.
55 Erieview Plaza
Cleveland, Ohio 44114

Dear Sir:

This is our decision in Application for Further Review of Protest No. 4104-5-000018, dated July 25, 1985, concerning entry 435447, dated June 14, 1984, liquidated April 26, 1985. The merchandise at issue is a belt grill from Sweden.

FACTS:

The article in question is the SQUARE Belt Grill which is a stainless steel industrial type imported by Stouffer Foods Corporation. Four models of this grill, the 34, 48, 60, and 80, are described in submitted literature as weighing from 2 tons to 3.5 tons with the capacity to cook from 1,300 to 2,600 lbs. of meat per hr. Flat meat moves from an extruder through the grill's aluminum nickle coated top and bottom cooking sections by means of two teflon coated fiberglass belts. The cooking sections can be either electrical or thermo oil heating elements.

The concerned entry was liquidated under the provision for industrial machinery whether or not electrically heated for the treatment of materials by a process involving a change of temperature such as heating or cooking, in item 661.68, Tariff Schedules of the United States (TSUS). Protestant maintains the subject grill is classifiable either under the provision for

C4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

other cooking stoves and ranges, and parts thereof, which are electro-thermic kitchen and household appliances, in item 684.28, TSUS, or as industrial machinery for preparing and manufacturing food or drink, in item 666.25, TSUS. However, no factual or legal arguments are presented to support either classification.

ISSUE:

Are either of protestant's proposed classifications more specific than item 661.68, TSUS?

LAW AND ANALYSIS:

Initially, classification in item 684.28 is precluded because the subject grill is of industrial design and quality, and not of a type used in the kitchen or household. Item 666.25 would prevail over an item 661.68 classification, absent other relevant considerations, under the rule of relative specificity. However, Schedule 6, Part 4, Subpart A, Headnote 1, TSUS, which governs entries under item 661.68, requires that a machine or appliance which is described in Subpart A and also is described elsewhere in Part 4 is classifiable in Subpart A. Item 666.25 appears in Schedule 6, Part 4, Subpart C, while item 684.28 appears in Schedule 6, Part 5, but has otherwise been found not to apply. The cited headnote would therefore require classification of the subject grill in item 661.68, TSUS.

We have interpreted the phrase "described in," in Part 4, Subpart A, Headnote 1, to mean that a tariff provision is sufficient to cover the named article, but that actual

077313

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

classification depends on other factors, such as relative specificity, exclusionary headnotes, and other relevant principles of tariff classification. Therefore, an article may be "described in" two or more provisions, as is the case here with respect to items 666.25 and 661.68, but, because of the cited invasionary headnote, classification in item 661.68 is required.

HOLDING:

Schedule 6, Part 4, Subpart A, Headnote 1, TSUS, requires that the subject SQUARE Belt Grill be classified in item 661.68. The protest should be denied. A copy of this decision should be attached to the Form 19, Notice of Action, to be sent to the protestant.

Sincerely,

Arthur P. Schaffer
for Harvey B. Fox
Director, Classification
and Value Division

333 West Wacker Drive
Suite 1900
Chicago, Illinois 60606-1218

Dear Mr. Zolno:

This is in reply to your letter dated July 5, 1985, submitted on behalf of your client, Beatrice Companies, Inc., regarding the classification of a frozen dessert product imported from Belgium. Your request was forwarded to Headquarters for reply.

In your letter, you point out that this product will be sold primarily at the retail level in speciality food stores, supermarkets and candy shops as well as in restaurants and hotels. The product is intended for sale as a frozen dessert product to the retail consumer. This product (of which there are two types), is similar in appearance to chocolate covered cherries with liquid centers. It is also similar in use to a popular domestic frozen dessert known as Bon Bons. However, in this instance this product differs in that the center is neither a liquid nor ice cream but rather a frozen hazelnut or frozen cherry fruit filling.

The ingredients for the frozen hazelnut dessert product are: water, chocolate (chocolate liquor, sugar, butter oil, lecithin), sugar, hazelnuts, butter oil, corn syrup, skim milk powder, whey powder, cocoa powder, stabilizer (sodium alginate, car geenan, carob bean gum, guar gum), mono and diglycerides.

The ingredients for the frozen cherry dessert product are: water, chocolate (chocolate liquor, sugar, butter oil, lecithin), cherries, skim milk powder, sugar, butter oil, corn syrup, stabilizer (mono and diglycerides, sodium alginate, carrageenan, carob bean gum, guar gum), natural flavor and color.

The exhibits submitted with your letter indicate that neither type of dessert product is in chief value of milk or cream and each type is packaged for sale on the retail level as a frozen dessert product. In a letter dated June 3, 1986, you presented the following description of how the imported product was manufactured.

1) Mix Preparation - Ingredients for the center filling are blended together. Only milk solids heat treated in a manner prescribed by the USDA would be used.

c1

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC ____

2) Homogenization - Blended ingredients are homogenized to prevent fat separation.

3) Pasteurizaton - The entire mix is pasteurized to maintain the high quality of the product.

4) Cooling - The mix is cooled to 4°C after pasteurization.

5) Storage - The mix is stored at +2°C for 6-18 hours. This aging improves the quality of the finished product.

6) Freezing - The mix is passed through a continuous freezer to reduce the temperature to -3°C.

7) Filling - The mix is pumped into individual molds and hard frozen.

8) Hardening - Mix is kept in molds until hard frozen.

9) Chocolate Coating - The filling is removed from the molds and dipped into warm chocolate.

10) Packaging - The finished product is packed into molded plastic trays and finally into individual packages.

11) Storage - The packages are stored at -28°C until sold.

In your submission, you argue that item 157.10, Tariff Schedules of the United States (TSUS), represents the proper classification of the imported product. Item 157.10, TSUS, covers the classification of candy, and other confectionery, not specially provided for.

The applicable headnote (Headnote 2, Subpart C, Part 10, Schedule 1, TSUS) pertaining to confectionery provides:

> 2. The term "confectionery", as used in this subpart, covers confections or sweetmeats ready for consumption.

The 1960 Tariff Classification Study pointed out:

> The term "confectionery" is a rather elusive one, difficult to define. There seems to be agreement, however, that the term embraces confections or sweetmeats that are ready for consumption. Therefore, this concept has been incorporated in Headnote 2.

This comment is in part a reflection of the fact that item 157.10, TSUS, can be traced back to the Tariff Act of August 10, 1790, when "sugar candy" was dutiable. The provision was changed in paragraph of the 212 Tariff Act of 1897 to include "sugar candy and all confectionery not specially provided for."

C8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

014370

The overlap in terms is not unique to the tariff schedules. See for instance, volume 6 of the Encyclopedia Britannica, 1963 Edition, which states:

> Confectionery Manufacture. For centuries man has devoted time and effort to perfecting the skills of confectionery manufacture, the art of properly blending various agricultural products into an attractive, palatable food known as candy.

It also should be noted that the Food and Drug Administration Regulations, 21 CFR 118.3(b), begins, "Confectionery" means candy and other food products made with sweeteners..."

Further, Webster's New World Dictionary, 2nd Edition, 1972, defines confection as "any kind of candy or other sweet preparation..." Thus, candy is a type of confection.

Your submission places great emphasis on the case of Westco Products, L.A. v. United States, 58 Cust. Ct. 306, C.D. 2974 (1967), where the court stated that "to become candy, whether using sugar or other sweetener, the prepared ingredients are molded or worked into various shapes or forms of a solid or semi-solid consistency." While it is clear that the imported product is molded, more is necessary to make it a candy. The definition you cited in your submission stresses that the food product is made principally from sugar. From the list of ingredients furnished, we do not believe the product is made principally from sugar. Consequently, the product can not be said to be a candy.

The court case of Leaf Brands, Inc. v. United States, 70 Cust. Ct. 66, C.D. 4409 (1973), is often cited as the authority for determining what is a confectionery. There, the court held a product known as "ZING", a powder composed of approximately 95 percent dextrose, plus citric acid, flavoring and coloring, which is contained in a simulated soft drink bottle and sipped by the user through a straw was classified as confectionery under item 157.10, TSUS. In so doing, the court stressed that the important point in determining the applicability of item 157.10, TSUS, was whether the particular item to be classified was used as a confectionery. Specifically, the court pointed out:

> Although various articles unquestionably are "confectionery", the exact scope of that term cannot be stated with certitude. Thus, the Tariff Commission observed in the Tariff Classification Study (1960) Schedule 1, page 164, that "[t]he term 'confectionery' is a rather elusive one, difficult to define," but added that there "seems to be agreement * * * that the term embraces confections or sweetmeats that are ready for consumption."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C9

077370

The term [confectionery] is defined in Webster's Third New International Dictionary (1961) as -

> confectionery n.1: sweet edibles (as candy, cake, pastry, candied fruits, ice cream): things prepared and sold by a confectioner * * *

And it is defined in Funk & Wagnalls New Standard Dictionary (1942) as -

> confectionery 1. the sweetmeats collectively that a confectioner makes or sells, as candy or other articles made of sugar, sirup, honey or the like. * * *

The court went on to say:

> From what has been said, it follows that a criterion for classification of an article as confectionery is its use (which may be evidenced by its manner of sale) as a confection, rather than its shape and texture, as defendant claims. Therefore, while a sweet edible product in powder form is not precluded, on that ground alone, from classification under item 157.10, it must be shown that it is chiefly used as confectionery.

While the court noted broad lexicographic definitions for "confectionery," that term, according to other authorities may be even broader. For example, in the Woman's Day Encyclopedia of Cooking, Vol. 3, p. 466 (3rd ed. 1966), it is stated with respect to the term "confection':

The word comes from the Latin word confectus, "prepared." Strictly speaking, it can mean any prepared dish * * * .

Therefore, this is an example of a situation where the tariff term should not to be considered as including everything literally within its scope. See, for example, United States v. Andrew Fisher Cycle Co., 57 CCPA 102, C.A.D. 986 (1970), and cases cited therein.

While the lexicographic, historical and decisional references thus far discussed show indecisiveness as to what constitutes a confection, other secondary authorities presuppose a more definite and limited meaning. For example, standard recipe books consistently include "confections" and "frozen desserts" as separate headings or chapters. See, for example, Rombauer and Becker, Joy of Cooking (1963 ed.), the Gourmet Cookbook (1950 ed.), Betty Crocker's Picture Cookbook (1st ed. 1950), etc. A fair inference from these and other authorities we have consulted is that the sine qua non of confectionery involves the heating and working or other processing of sugar to alter its crystalline structure to achieve special textural and visual effects. When other methods or ingredients are used, they are used to imitate these effects.

C10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

In our opinion, this concept of confectionery is consistent with the tariff language and headnote definition as well as the discussion in the Westco Products decision, supra. While it does not take into account the use concept in the Leaf Brands decision, the merchandise in that matter was a preparation which could be used as a soft drink mix and which otherwise was not similar in any respect to the instant merchandise. Further, we do not believe the court's consideration of use factors was intended to preclude consideration of method of manufacture factors when otherwise pertinent or controlling. With respect to these, the salient feature in the production of the instant product is a freezing process, not a process involving the alteration of the crystalline structure of sugar or imitation thereof. It should be further noted that while it may be argued that Headnote 2 nevertheless presupposes a broad definition for "confectionery" by its acknowledgment of the need to limit the term by exceptions, those exceptions do not include frozen desserts. The lack of such an exception is an indication that the drafters of the TSUS did not consider frozen foods as included within the meaning of "confectionery" in any circumstances.

Therefore, it is our conclusion that for tariff purposes, the use of sugar merely as a sweetener as in frozen desserts does not make them confectionery. Nor would we regard the addition of a candy coating to a product which otherwise is not a confection as converting it to a confection.

The legislative and historical information discussed supra shows that the term "confectionery" as used in the TSUS has its genesis in the earliest tariff laws enacted before the commercial development of ice cream and other frozen desserts. Therefore, the main question here is whether the instant merchandise must be regarded as confectionery under the principle that a tariff term includes all forms of the article including improvements or new versions created subsequent to enactment of the tariff schedules. But one of the criteria for applying that rule is that the new product be known by the tariff term. Polaroid Corp. v. United States, 66 Cust. Ct. 116, C.D. 4179 (1971).

There is nothing on the packaging of the product to indicate that it is commercially or commonly designated or otherwise referred to as a candy, sweetmeat or confection. Rather, the designation translates to "frozen patties." Cassell's French Dictionary (1962 ed.). But even if the term "bouchees" used to designated the merchandise were equivalent in English to "confections," it is also well established that a tariff term does not apply to merchandise when it can only be applied to the merchandise using a modifier. See, for example, United States v. Sandoz Chemical Works, Inc., 115, C.A.D. 711 (1959). Under the rule, we would regard the term "glacee" or "frozen" as a type of necessary modifier which would preclude the classification of the merchandise as a confection even if it were designated as such.

Finally, the argument is made that the merchandise must be regarded as a confection because it is not used as a dessert. However, we regard any semantic distinctions underlying any such view as another extension of the

C11

THIS DOCUMENT [illegible] PUBLIC [illegible]

017370

use rationale of the Leaf Brands court to an unintended extreme. Therefore, we adhere to our view that frozen food products do not constitute confectionery for the purposes of classifications under item 157.10 for the several reasons enumerated above including our determination that the all-forms-of-the-article doctrine is not for application here.

It is our conclusion that the merchandise is properly classifiable under the provision for edible preparations, in item 183.05, TSUS.

Sincerely,

Arthur F. Schaffer

Mr. Gary Mooney
Blaiklock Inc.
666 Burrard Street, Suite 200
Vancouver, British Columbia V6C 3C5

Dear Mr. Mooney:

This is in response to your letter of October 17, 1985, which has been referred from our New York office. Your letter concerns the appropriate tariff classification of various soft sculptures from Canada and Taiwan. Samples accompanied your request.

The articles that are the subject of this request represent a variety of stuffed figures. They have coverings composed of knit and woven man-made fiber fabrics over a polyester filling. These articles have attachments composed of plastic, metal and wood materials. You state that the articles are in chief value of man-made fibers.

Item 1 represents a head of a baker who is wearing a bowtie. The baker's head has been glued to a wooden spoon that measures approximately 12 inches and has a metal loop for hanging.

Item 2 described as "Naughty Nana" consists of a head and torso attached to a wood spoon. The figure is wearing wire glasses and a hat and dress trimmed with lace. A loop for hanging is attached to the head. The article is considered to be ornamented for tariff purposes.

Item 3 consists of a figure who is sitting on the moon, and is wearing a night hat and a nightshirt. There is a loop for hanging the article.

Item 4 consists of the heads of a man and a woman who are wearing wire glasses and bowties. Both are wearing hats. The women's hat has lace trim, and the man's hat has braid. The heads are glued to a round straw mat that has a border of fabric approximately 1 inch wide that is woven through the straw and is tied in a bow at the top of the mat. We regard the article as ornamented for tariff purposes.

Item 5 is a wood spoon rack attached to a head of a baker like that described in Item 1. The rack includes three wood spoons of varying lengths.

C13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Item 6 is a refrigerator magnet representing a bare bottom.

The issue here is whether these articles are classifiable as furnishings. Headnote 1, Subpart C, Part 5, Schedule 3, TSUS, defines the term "furnishings" as follows:

Subpart C Headnote

> 1. For the purposes of this subpart, the term "furnishings" means curtains and drapes, including panels and valances; towels, napkins, tablecloths, mats, scarves, runners, doilies, centerpieces, antimacassars, and furniture slipcovers; and like furnishings; all the foregoing, of textile materials, and not specially provided for.

The Customs Service has ruled on previous occasions that textile wallhangings are like furnishings. See Headquarters Ruling Letters 045156 dated August 3, 1976, and 030030 dated January 23, 1974. More recently in a ruling dated December 31, 1985, file 077105, we considered a small decorative pillow with a loop for hanging to be a wallhanging. Thus, it was classified under the provision for furnishings.

Turning to the merchandise at hand, it is our view that items 1, 2, 3, and 4 are wallhangings. We consider them to be "like" furnishings for tariff purposes. Thus, items 1 and 3 are classifiable under the provision for other furnishings, not ornamented, of man-made fibers in item 367.6325, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 4 cents per pound plus 9.9 percent ad valorem.

Item 2 and item 4 are classifiable under the provision for other furnishings ornamented, of man-made fibers in item 365.8940, TSUSA, with a duty rate of 14.2 percent ad valorem.

Neither item 5, the spoon rack, nor item 6 is among the articles listed in the headnote defining furnishings. Nor, do we consider them to be furnishings "like" those listed in the headnote. Thus, they are classifiable under the provision for other articles not ornamented, of man-made fibers, other, in item 389.6270, TSUSA, with duty at the rate of 4 cents per pound plus 10 percent ad valorem.

The spoons in Item 5 are classifiable as forks and spoons, of wood, other, in item 206.4700, TSUSA, dutiable at the rate of 5.3 percent ad valorem. Articles classifiable under this provision which are products of Taiwan are entitled to duty-free treatment under the Generalized System of Preferences GSP) upon compliance with all regulations.

C14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Due to the frequent changes to the statistical suffixes (the last two digits of the item number) and the applicability of import restraints, you should contact your local Customs office prior to the importation of this merchandise to determine its current status.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Re: Decision on Protest and Application for Further Review
Number 1001-5-007691

Dear Sir:

The above noted protest and application for further review were filed by counsel for protestant Cardinal Glove Co., Inc., of Clifton, New Jersey. At issue is the classification of vinyl-coated cotton gloves which are the products of Korea. Seven different styles of gloves are involved.

Customs claims that the gloves are properly classifiable as either gloves ... : of vegetable fibers: made from a pre-existing machine-knit or -woven fabric, or any combination of such fabrics: woven, under the provisions of item 704.40, Tariff Schedules of the United States (TSUS), dutiable at the rate of 25 percent ad valorem, or not woven, under the provisions of item 704.45, TSUS, also dutiable at the rate of 25 percent ad valorem. Importations of gloves which are the products of Korea under either of these item numbers are subject to the restrictions of quota category 331, in that visas from the country of origin must be obtained in order to permit their entry into the United States.

Protestant claims that the gloves are properly classifiable as gloves of rubber or plastics: other, under the provisions of item 705.86, TSUS, dutiable at the rate of 19.3 percent ad valorem. Gloves classifiable under this item number are not subject to quota restrictions.

FACTS:

Commencing January 7, 1985, at Newark, New Jersey, protestant Cardinal Glove Co., Inc., imported seven styles of vinyl coated cotton gloves under the following entry numbers: 85-713416, 713184, 713347, 713344, and 718207. Style numbers 213, 214, 658, 709 and 718 are composed of vinyl-coated knit cotton fabric. Style numbers 877 and 877L are composed of vinyl-coated woven cotton fabric.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D2

Redelivery of all gloves was requested because Customs found protestant's claimed classification to be incorrect. Protestant entered all the gloves under the classification as other gloves of plastic under the provisions of item 705.86, TSUS. Customs determined that these gloves were more properly classifiable as gloves of vegetable fibers under items 704.40, or 704.45, TSUS. Additionally, classification of the gloves under the textile provision imposed visa requirements on their entry into the United States. Inasmuch as no visas had been obtained and the goods had been released, redelivery was requested. Protestant did not redeliver, but filed this protest in response to the denial of entry. The protest and application for further review were timely filed and are properly the subject of this administrative ruling.

Counsel for protestant describes the gloves as having an outer surface composed of plastic and an inner lining of cotton. The outer surface is claimed to have a plastic, as distinguished from a textile, surface. It is suggested that in some styles the grainy outer surface results from the nature of the plastic coating.

ISSUE:

Are the gloves properly classifiable as gloves of rubber or plastics under item 705.86, TSUS, or as gloves of vegetable fibers, under items 704.40 or 704.45, TSUS, and thereby subject to visa requirements pursuant to textile quota category 331?

ANALYSIS:

Counsel claims that Customs requests for redelivery have been issued improperly because a uniform and established practice exists to classify each style of glove as a glove of rubber or plastic. The practice claim is based on administrative precedent and uniform liquidations.

Cardinal styles 877 and 877L are composed of base fabric of plain woven cotton. Both sides of the base fabric have been heavily napped. The exterior of the base fabric is heavily coated with plastic. Textile fibers from the nap penetrate through the coating. Tactilely both samples are furry or fuzzy. The weave construction is barely visible through the plastic.

Customs Ruling Letter of December 19, 1973, (Control No. 029939) found that a glove similar to styles 877 and 877L was classifiable as a glove of rubber or plastic under item 705.85, TSUS. The ruling stated that there is a uniform practice of

D3

077460

classifying similar merchandise under the plastic glove provision. Additionally, the following rulings are cited as holding similar or identical plastic-coated gloves to be classifiable under item 705.85 or 705.86, TSUS: Customs Ruling Letter dated February 19, 1973, (Control No. 024625); Customs Ruling Letter dated September 5, 1973, (Control No. 028625); and Customs Ruling Letter dated June 28, 1979, (Control No. 062277).

A sample of the glove which was the subject of Customs Ruling Letter dated September 5, 1973, supra, has been submitted. An affidavit from the president of the company that received the ruling attests to the identity of the sample. A visual examination confirms its similarity to style 877.

Pursuant to the provisions of section 315(d) of the Tariff Act of 1930 (19 U.S.C. 1315(d)), the Secretary of the Treasury must make a finding of the existence of a uniform and established practice. A letter written by the Acting Commissioner of Customs acknowledging the existence of "an established and uniform" practice is sufficient evidence to prove that the Secretary of the Treasury had made a finding that such a practice existed. Asiatic Petroleum v. United States, 59 CCPA 20, C.A.D. 1029 (1971). Accordingly, we find that the decision of December 19, 1973, supra, signed by the Commissioner's delegee, enunciates the existence of a uniform and established practice regarding the classification of certain plastic gloves similar in style to Cardinal styles 877 and 877L. The other cited rulings substantiate this finding. As a matter of law, Cardinal styles 877 and 877L are classifiable as gloves of rubber or plastic.

Cardinal styles 213, 214, 709 and 718 are composed of a base fabric of knit cotton, heavily napped on both sides. The exterior of the base fabric is heavily coated with plastic. Textile fibers from the nap penetrate through the coating, but these fibers can only be seen microscopically. The samples have a rough grainy feel that does not resemble a textile.

Gloves similar to the above-noted styles have been held classifiable as gloves of rubber or plastic. See Customs Ruling Letter dated November 8, 1974, (Control No. 036364); and Customs Ruling Letter of March 18, 1974, (Control No. 032814). Additionally, counsel cites New York Ruling Letter of September 8, 1982, (Control No. 803728), as precedent for classifying these styles of gloves as gloves of rubber or plastic; however, a question arises with regard to the identity of the glove which was the subject that ruling letter.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

DH

077760

Counsel presents a sample alleged to be the subject of the New York Ruling Letter. The sample is composed of a cotton liner that has a coating of plastic. The coating is brown and imparts a grainy feel to the exterior of the glove. The sample does not comport to the description of the glove made in the letter of inquiry filed by the importer. That letter indicated that the glove was similar to the one which was the subject of Customs Ruling Letter dated February 13, 1973, supra. The sample in the latter ruling is described by counsel as a glove made of a yellow non-stretch vinyl material, which is more akin to styles 877 and 877L. As such, the New York Ruling letter is not of precedential value.

As previously noted, 19 U.S.C. 1315(d) requires that the Secretary make a finding of the existence of a uniform and established practice. None of the administrative decisions cited announce such a finding with regard to the classification of these styles of glove. Two rulings are insufficient basis upon which a finding of a practice can be made. Accordingly, a uniform and established practice does not exist with regard to glove styles 213, 214, 709 and 718 through a finding of the Secretary.

An established and uniform practice can be shown by actual uniform liquidations, even though the Secretary of the Treasury has made no 'finding' that such a practice existed. Heraeus-Amersil, Inc. v. United States, ___ CIT ___, 617 F. Supp. 89 (1985), aff'd Fed. Cir. Appeals No. 86-602/650, decided July 8, 1986. The Court can make the determination on a case-by-case basis according to certain guiding principles. Factors to be considered are the number of entries resulting in the alleged uniform classifications, the number of ports at which the merchandise was entered, the period of time at which the alleged uniform classifications took place, and whether there had been any uncertainty regarding the classification over its history. Heraeus-Amersil, supra. See also I.A. 73/85.

Counsel states that uniform liquidations of these styles of gloves at eight different districts in four different regions over a period of years substantiates a finding that a uniform and established practice as to their classification exists. Counsel avers that that uniform liquidations of these gloves as gloves of rubber or plastic occurred at Newark, JFK Airport, Seattle, Chicago, Baltimore, Cincinnati, Portland and New York Seaport.

DS

Counsel submits a list of entries made by Cardinal Glove at Newark in calendar years 1983 and 1984. The following number of entries of each style were liquidated as gloves of rubber or plastic during that time: (1) Style 213 - 4 entries; (2) Style 214 - 5 entries; (3) Style 709 - 4 entries; and (4) Style 718 - 2 entries. Further evidence indicates that another glove importer made 13 entries of similar style gloves at Cincinnati between September 1982 and January 1985. This second importer also had one entry of these gloves at Baltimore.

Counsel provides lists that indicate hundreds of entries of gloves occurred at Chicago, Seattle, Portland (Ore.), and New York Seaport. Numerous styles of gloves were involved. Not all of these entries were of gloves similar to styles 213, 214, 709 and 718. Affidavits presented do not confirm that all entries liquidated at these other ports were of styles similar to Cardinal styles 213, 214, 709 and 718; however, a poll of all districts reveals that import specialists involved with importation of plastic-coated work gloves, in near unanimity, agree that a uniform and established practice exists to classify these styles of glove as gloves of rubber and plastic. This fact supports the evidence presented by counsel as to the existence of a practice based on uniform liquidations.

We are of the view, therefore, that a uniform and established practice exists to classify styles 213, 214, 709 and 718 as gloves of rubber or plastic. The numbers of entries involved, the number of ports where such entries of similar gloves occurred plus the opinions of the pertinent import specialists are sufficient to support this finding.

Glove style 658 is composed of a knit cotton liner which is covered on one side by a heavy vinyl coating. The coating is opaque and no fibers can be seen through a visual examination. The coating imparts a smooth feel to the exterior of the product.

Counsel cites Customs Ruling Letter of July 11, 1980, (Control No. 064805), as supporting the proposition that a uniform and established practice exists for classifying this style of glove as a glove of rubber or plastic. The ruling states, in pertinent part, "Merchandise like the sample glove has previously been held to be classifiable under the provisions for gloves of rubber or plastic."

A sample of the glove which was the subject of that ruling has been submitted. An affidavit from the president of the company that received the ruling attests to the authenticity of the sample. The sample is identical to style 658 except for color.

D6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

While we concede that the ruling is on point, it is insufficient, standing alone, to support a finding of a practice. The quoted language indicates that other rulings may support the classification decision reached in the subject ruling, but it is not suggested that the other rulings announce a uniform and established practice to classify this style of glove as gloves of rubber or plastic.

However, as with the previously described styles, style 658 also has been confirmed by polled import specialists to be the subject of a uniform and established practice. Numerous entries of this style glove at Newark in 1983 and 1984 were liquidated as gloves of rubber or plastic. Such style has been uniformly classified as gloves of rubber or plastic. As such, we find that a practice exists to classify style 658 as gloves of rubber or plastic.

Inasmuch as we have found that a uniform and established practice exists to classify these gloves as gloves of rubber or plastic under item 705.86, TSUS, it is unnecessary to review the classification of these products on the merits.

HOLDING:

We find that all styles of the gloves are properly classifiable as gloves of rubber or plastics: other, under the provisions of item 705.86, TSUS, dutiable at the rate of 19.3 percent ad valorem, pursuant to a uniform and established practice. Gloves classifiable under this item number are not subject to quota restrictions.

Accordingly, the protest should be allowed. A copy of this decision should be given to the protestant when notice of action is given on Customs Form 19.

Sincerely,

Harvey B. Fox

Dear Mr. Hearst:

This is in reference to your inquiry concerning the tariff classification of certain printed catalogs from Canada.

A sample catalog was submitted which depicted fur coats which it is presumed are products of the United States. The catalog, it is understood, will be distributed with price lists, which were not imported with the catalogs.

Printed catalogs without prices or printed price lists are classified under the provision for books not specially provided for in item 270.25, TSUS, and are free of duty.

Sincerely,

Arthur J. Schaffler

Edward J. Doyle, Esq.
Barnes, Richardson & Colburn
Attorney & Counsellors at Law
1819 H Street, N.W.
Washington, D.C. 20006

Dear Mr. Doyle:

This is in reference to your letter of December 13, 1985, concerning what you believe is a conflict between two rulings on the classification of iodine.

In a ruling (023903 dated August 2, 1973) it was pointed out that an iodine which meets U.S. standards and has a 99.8 percent purity and has not been resublimed would be considered crude in item 415.25, TSUS, since crude iodine was normally considered to be 99.0 to 99.8 percent pure.

In a subsequent ruling (073941 dated September 6, 1984) an iodine of 99.95 percent purity which had not been resublimed was considered. It was noted that resublimed iodine was 99.9 percent pure or better, and it was concluded that an iodine which had been processed to a purity greater than resublimed and was used for the same purposes as resublimed would no longer be considerd crude for tariff purposes. Rather, it was classified under the similitude provision in item 798.00, as most resembling resublimed iodine in item 415.27, TSUS. It is now contended that the same process was used to produce the iodine considered in both the 1973 and 1984 decisions and therefore the 1973 ruling is binding. It is argued that the fact that an iodine may be 99.9 percent pure does not take it out of the crude category, since that product's increased purity is not the result of resublimation but improved technology which has increased the purity of a crude iodine. Therefore, since the product is not resublimed it has to be considered crude.

We take the position that the 1973 ruling is not controlling on the classification of an iodine of 99.9 percent purity. The earlier decision considered the classification of an iodine of 99.8 percent purity. It was noted in the 1973 decision that crude iodine is normally 99.0 to 99.8 percent pure.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

DIO

In the 1984 decision, it was noted that resublimed iodine was 99.9 percent pure, and the conclusion was that an iodine processed to a degree of purity greater than 99.9 percent was classified by virtue of the simulitude provision as resublimed iodine.

We see nothing inconsistent in those decisions. The 1973 decision covered a product, the purity of which was within the crude range. The 1984 decision dealt with iodine acknowledged to be similar to resublimed.

Historically, the tariff has viewed the resublimed product as improved over the crude product. The 1948 Summaries of Trade and Tariff Information noted that resublimed iodine is obtained by condensing the vapor from heated crude iodine. The resublimed is used principally in medicines. The traditional view was that the iodine had to be resublimed before it could be commercially acceptable.

The 1973 decision dealt solely with the classification of an iodine which was of a purity within the range of that of crude iodine. Essentially the only issue was whether the fact that it met U.S.P. standards removed it from the crude state. The decision did not set up a standard for any iodine processed without resublimation to the highest degree of purity. As has been shown, traditionally the tariff has regarded "crude" as a product which is not advanced and remains in a relatively unfinished condition. The fact that the purity of iodine has been improved without resublimation does not mean that the product would remain "crude." An iodine which has been purified without resublimation to a purity equal to or better than that of resublimed iodine can certainly not be considered "crude," especially if its purity approached 100.0 percent. It is interesting to note that those who use iodine of a purity in the resublimed range but which has not, in fact, been resublimed, admit that the iodine is of resublimed quality.

Thus we see no contradiction in the decisions and remain of the opinion that an iodine which is in the purity range associated with crude iodine would be classified as crude, and one in the resublimed range, if it was not resublimed, would be classified as resublimed iodine by virtue of the similitude provision.

Sincerely,

Harvey B. Fox

077490

This ruling concerns the tariff status of two men's jackets.

ISSUE:

The issue presented by the subject merchandise is whether garments can be classified under the provision for garments designed for rainwear, hunting, fishing, and similar uses, wholly or almost wholly of fabrics which are coated or filled, or laminated, with rubber or plastics material, of man-made fibers, in item 376.56, Tariff Schedules of the United States (TSUS), if the coated, filled, or laminated, fabrics which provide protection from moisture or dampness are not the outershell fabrics.

FACTS:

Two sample garments were submitted. Both are men's jackets that extend downward to the hip area and have long sleeves with a full front zippered opening that extends to the tip of the collar. One is a lighweight garment with a woven man-made fiber outershell and a knit man-made fiber lining. The lining has a plastics material laminated on its nonexposed surface. This plastics material is stated to make the garment waterproof as well as windproof. The other garment is a man's

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D13

ski-type jacket with an elasticized waist, a self hood contained in a compartment located at the back of the collar, a placket which covers the front zippered opening, knit sleeve cuffs, and four exterior pockets that are secured with zipper closures. The outershell fabric on this garment is made from a woven man-made fiber fabric, as is the lining. Between the lining and the outershell is a thick man-made fiber batting or insulating layer. Attached to the exterior side of this insulating layer is a man-made fiber fabric that has been laminated with the same plastics material as used in the first garment. On both garments the inside seams have been sealed with what appears to be a plastic tape in order to prevent water or moisture penetration.

Sufficient advertising literature has been submitted to convince Customs that these garments are sold as waterproof and windproof garments.

LAW AND ANALYSIS:

Both sample garments are the type of garments that may be classified in item 376.56, TSUS. See Izod Outerwear v. United States, United States Court of International Trade, Slip Op. 85-72 (decided July 23, 1985), which concerned men's light-weight woven jackets, and A. N. Deringer Inc. v. United States, 66 Cust. Ct. 378, C.D. 4218 (1971), which held that waterproof snowsuits were classifiable in item 376.56 because the water resistance feature of those garments distinguishes them from other such garments.

D14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

071490

077490

By the express wording of the superior heading to item 376.56, in order for garments to be classifiable under that tariff provision, those garments must be "wholly or almost wholly of fabrics which are coated or filled, or laminated, with rubber or plastics." In the case of the two samples, neither sample is wholly of fabrics that are coated or filled, or laminated with rubber or plastics. Accordingly, in order to be classifiable under item 376.56, the garments must be determined to be "almost wholly of" such fabrics. The term "almost wholly of" is defined in General Headnote 10(f)(iii), TSUS, as meaning that the essential character of the article is imparted by the named material, notwithstanding the fact that significant quantities of some other material or materials may be present. In Deringer, supra, the court determined that although the garment before it was designed to provide warmth to the wearer, the essential character of that garment was imparted by the plastics coated or laminated fabric which made the garment waterproof.

However, the garments which the courts have previously ruled upon in this area have all had the coated or filled, or laminated fabric which provided the necessary water resistant feature to those garments on their exteriors or outershells. Customs is now urged to take the position that since the language of the predecessor provisions to item 376.56 required the outershell fabric to be the fabric in the garment with

E1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

a plastics coating, and that the legislative history of the statute changing those provisions did not indicate an intention by Congress to change that requirement, the subject garments should not be classified in item 376.56.

The original language of items 376.50-376.58, TSUS, which are the predecessor provisions to the present rainwear provisions, only included within their coverage garments which had their outershell coated or covered with rubber or plastics material.

In reviewing all the material and arguments presented to Customs concerning the intended coverage of the changes created by the Tariff Schedules Technical Amendments Act of 1965, which enacted the present rainwear provisions, we are unable to find any clear expression of legislative intent that the new rainwear provisions were intended to cover only that merchandise previously classifiable as rainwear. In fact, in looking at the specific wording of the superior heading to the present rainwear provisions, there are two clear indications that Congress did not, in fact, intend the coverage of the new rainwear provisions to be limited only to those garments previously classified in the predecessor provisions. First, the prior provisions were applicable only to rainwear. The present provisions are applicable to garments designed for rainwear, hunting, fishing, and similar uses. The present provisions clearly expand the coverage over what was includable under the predecessor provisions. Secondly, and

E2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077490

perhaps most importantly, the superior heading to the present rainwear provisions imposes a criterion for classification under those provisions not previously required. This is the "almost wholly of" test which requires Customs to look at which portion of a garment provides that garment with its essential character.

In view of the significant changes which Congress made when enacting the present rainwear provisions, we find no clear evidence that those provisions were intended to be limited only to that merchandise previously classifiable as rainwear.

HOLDING:

There is no requirement that in order to be classifiable in item 376.56, the outershell fabric of a garment must be the fabric providing the essential character to that garment. Accordingly, both sample garments, described above, are classifiable under the provision for garments designed for rainwear, hunting, fishing, and similar uses, wholly or almost wholly of fabrics which are coated or filled, or laminated, with rubber or plastics, of man-made fibers, in item 376.56, TSUS.

Mr. Leonard Pasternak
President
Components Corporation
400 Salisbury Road
Wyncote, Pennsylvania 19095

Dear Mr. Pasternak:

That portion of your letter dated November 8, 1985, addressed to our New York office concerning the dutiable status of an insole produced in Taiwan, has been referred to this office for a direct reply to you. A sample was submitted for examination.

The sample is a molded, full insole of foamed plastic with a non-woven fabric sock lining.

The issue to be decided is whether the insole is almost wholly of foamed plastic. General Headnote 9(f)(iii), Tariff Schedules of the United States (TSUS), defines the term "almost wholly of" to mean "that the essential character of the article is imparted by the named material, notwithstanding the fact that significant quantities of some other materials may be present."

It is our view that the insole is almost wholly of foamed plastic. It is thicker in the heel and arch area than at the ball and has been molded to "cup" the wearer's heel. It is our opinion that both of these features which are imparted by the foamed plastic are present to provide substantial shock absorption and to increase the foot's stability by preventing one's heels from sliding within the shoe. These two characteristics are intended to reduce the chance of injury while jogging and constitute the essential character of the merchandise. It should be noted that the plastic is the only material which contributes to this "essential character."

In view of the foregoing, it is our position that the sample insole is classifiable under the provision for expanded, foamed, or sponge rubber or plastics, and articles not specially provided for wholly or almost wholly of such rubber or plastics in item 770.80, TSUS, and dutiable at the rate of 7.3 percent ad valorem.

Sincerely,

Re: Decision on Application for Further Review of Protest Nos. 1001-2-008652 and 1001-2-008653

These protests were filed against your decisions in the liquidations of various entries covering shipments of athletic footwear produced in Korea.

This ruling concerns the validity of American selling price appraisements of certain athletic footwear.

077588

FACTS:

The athletic footwear involved invoiced as "Pony Slam Dunk", "Pony Court" and "Pony Junior Court" was classified in liquidation under the provision for other footwear which is over 50 percent by weight of rubber or plastics or over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or plastics in item 700.60, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 20 percent ad valorem.

Schedule 7, Part 1, Subpart A, Headnote 3(b), TSUS, provides that "Subject to the provisions of section 336 of this Act, the merchandise in item 700.60 shall be subject to duty upon the basis of the American selling price as defined in section 402 or 402a of this Act, of like or similar articles manufactured or produced in the United States."

ES

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Pursuant to the above-cited headnote style No. 6520 "Slam Dunk" was found to be legally similar to the domestically produced Converse All Star Pro Canvas (Pro) while style Nos. 5424 (No. 1 Tracy) and style No. 5544 (No. 1 Tennis) were found to be legally similar to the domestically produced Keds Whirlwind (Whirlwind) and the Keds Tornado (Tornado) respectively. The American selling price of the "Pro" varied from $13.20 less 2 percent to $17.40 less 2 percent depending upon the date of exportation. The American selling price of the "Whirlwind" was $22.50 less 2 percent. The American selling price of the "Tornado" was $22.50 less 2 percent.

The protestant maintains that the imported styles should be appraised at invoice values or alternatively at lower ASP values.

ISSUE:

1. Were the domestically produced prototypes freely offered within the purview of section 402a(g), Tariff Act of 1930, as amended?

2. Are the imported shoes legally similar to the domestic prototypes for ASP purposes?

LAW AND ANALYSIS:

For the purposes of determining similarity in American selling price cases, four tests have been used as guides: (1) similarity of material; (2) commercial interchangeability; (3) adaptability to the same use; and (4) competitive character.

In 1966 certain guidelines to be used in appraising footwear were issued by the Commissioner of Customs. Those guidelines provide in part that "In carrying out that function such officers shall use all reasonable ways and means to select the product manufactured in the United States

077588

E6

THIS DOCUMENT MAY BE RELEASED TO THE
'C

which in their opinion is like or most similar to the import in physical characteristics, such as appearance, durability, quality construction, workmanship and finish."

Protest No. 1001-2-008652
Protestant's Position

The American selling price basis of valuation is not proper because at the time of exportation of the imported footwear the domestically produced "Pro" was not freely offered for sale and there was no price an American manufacturer, producer or owner "would have received or was willing to receive for such merchandise."

It is asserted that the claim that the "Pro" was not freely offered is substantiated by the fact that before August 1980, the "Pro" had a vulcanized construction while after that date it was changed to a stitched construction. Delivery of the stitched construction footwear did not take place until approximately October or November of 1980 which means that the "Pro" could not have been freely offered to all purchasers at said time.

In support of its position that the "Pro" was not freely offered the protestant maintains that Converse's lack of massive distribution of the "Pro" shows that there was no price at which such shoes were freely offered for sale to all purchasers.

Customs' Position

We disagree with protestant's claim that the "Pro" was not freely offered and that there was no price an American manufacturer, producer or owner "would have received or was willing to receive for such merchandise." Our reasons for this position are as follows:

(1) The Converse catalog was widely distributed by mail and at trade shows.

(2) The "Pro" was in the Converse catalog for at least 3 years. It is unlikely that a reputable company would make bad faith offers of a shoe over a period of years.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

017588

E7

(3) The President of Converse has submitted an affidavit stating that all cataloged American made shoes are freely offered.

(4) There is no merit to the claim that the approximately 25 percent price increase of the "Pro" in August of 1980 shows that the offer was in bad faith. The period of 1979-1980 was one of record high inflation. It is more surprising that Converse did not substantially increase the price of the Pro in early 1980 than that it increased the price of the Pro 25 percent in August of 1980.

(5) There is no merit to the statement that the "Pro" was not freely offered because it did not have massive distribution. The protestant has not presented any evidence to support that statement and the courts have never held that an American prototype had to have "massive distribution" in order for the offer to be bona fide.

The protestant claims that the "Pro" was changed from a vulcanized construction to a stitched construction in August of 1980. We know that this statement is not accurate because:

(1) The Converse catalog of 1979 describes the shoe as having a "single unit outsole (shell molded bottom) and the stitching of the unit outsole to the upper is clear in the picture. The Converse catalogs of 1980 and 1981 show the same.

(2) The sample received from Converse in August of 1979 was just like the picture. It was not vulcanized, but had a stitched, shell molded bottom.

(3) Converse used the same stock numbers for 5 of the shoes of this style from 1979 through 1981. Our experience was that Converse would usually change the stock number if they just changed the color or the size run. However, they would always change the stock number and usually change the style name, if the method of construction were changed.

Protestant's Position

In the alternative, if the American selling price is found to apply, the protestant claims that the proper domestic prototype on which to base a appraisement is the Converse Poly 500 (Poly 500).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E8

077588

The imported footwear and the "Poly 500" are similar with respect to their commercial character as determined by the tests of Zerkowitz, and thus are similar with respect to American selling price. This is established by a comparison of the footwear used for appraisement purposes, "Pro" with the claimed footwear "Poly 500," which shows that the "Poly 500" is closer in price to the imported footwear than the "Pro."

The imported footwear and the "Poly 500" footwear are similar with respect to their process of manufacture, materials, quality and construction, and thus, are similar for American selling price purposes. The manufacturing process of the "Poly 500" and the imported footwear are basically the same, i.e., both are vulcanized and unstitched. In contrast, the manufacturing process of the "Pro" utilizes a cold process which is dissimilar from the vulcanized, stitched construction of both the "Poly 500" and the imported footwear.

The construction of the "Poly 500" and the imported footwear are closest to each other than to any of the other footwear which are claimed to be alternative prototypes. Both are of similar weight canvas, both are tricot lined and both are padded. In constrast, the "Pro" uses a heavier duck canvas and is unlined.

The imported footwear and the "Poly 500" meet the criteria of "commercially interchangeable" and "adaptable for the same use" as determined under Zerkowitz, and thus, are "similar" for American selling price purposes. Both the "Poly 500" and the imported footwear are "commercially interchangeable" and "adaptable for the same use." Both footwear perform the same general athletic purpose and may be chosen as substitute for each other by prospective consumers. In contrast, the "Pro"

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E9

077588

and the imported footwear do not meet these criteria, as evidenced by the "Pro's" superiority of construction and commercial appeal to professional basketball players rather than to the general public.

The imported footwear and the "Poly 500" meet the criteria of "competitive character" as determined under Zerkowitz and thus, are similar for American selling price purposes. The higher quality, professional "Pro" footwear does not compete directly with the lower quality, general purpose imported footwear. In addition, the Customs Service compared the imported footwear to the "Poly 500" up to 1979. As both styles of footwear have not substantially changed since 1979, the Customs Service should maintain its position with respect to its comparison of these two footwear styles.

In the alternative, if the "Poly 500" is determined not to be the proper domestic prototype, the protestant claims that the Converse All Star II (Star II) is the proper domestic prototype on which to base appraisement.

The imported footwear and the "Star II" are similar with respect to their "commercial character" as determined under the tests of Zerkowitz, and thus, are "similar" with respect to American selling price. This is established by the fact that a comparison of the domestically produced "Pro" with the "Star II" shows that the "Star II" is closer in price to the imported footwear than the Pro.

The imported footwear and the "Star II" are similar with respect to the process of manufacture, materials, quality and construction and thus are "similar" for American selling price purposes. The manufacturing process and construction of both footwear are basically the same. The construction is "similar" in that they both have a padded collar and similar weight canvas. The protestant's contention that the "Poly 500" is

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077588

E10

the preferred prototype rather than the "Pro", "Star II" and the Pro Keds Royal #1 (Royal #1), is supported by evidence that both the imported footwear and the "Poly 500" are the only footwear that have a tricot lining.

The imported footwear and the "Star II" meet the criteria of "commercial interchangeability" and "adaptability for the same use" and "competitive character" as determined under the tests of Zerkowitz, and thus, are "similar" for American selling price purposes.

In the alternative, if neither the "Poly 500" nor the "Star II" is determined to be the proper domestic prototype, the protestant claims that the "Royal #1" is the proper domestic prototype on which to base appraisement.

The "Royal #1" is "similar" to the imported footwear for American selling price purposes because it meets the established tests and guidelines for determining similarity. This is established by the fact that the imported footwear and the "Royal #1" are similar with respect to their "commercial character," "competitive character," process of manufacture, materials, quality, construction, "commercial interchangeability" and "adaptability for the same use."

The imported footwear and the "Royal #1" are "similar" with respect to their "commercial character" as determined under the tests of Zerkowitz, and thus, are "similar" with respect to American selling price. This is established by the fact that a comparison of the footwear used for appraisement purposes namely, the "Pro" and the "Royal #1" shows that the "Royal #1" is closer in price to the imported footwear than the "Pro."

The imported footwear and the "Royal #1" footwear are similar with respect to process of manufacture, materials, quality and construction, and thus are "similar" for American selling price purposes. The manufacturing E11

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

process and construction of both footwear are basically the same. The protestant's contention that the "Poly 500" is the preferred prototype in comparison to the "Pro," "Star II" and "Royal #1" is supported by evidence that both the imported footwear and the "Poly 500" are the only footwear that have a tricot lining.

The imported footwear and the "Royal #1" meet the criteria of "commercial interchangeability" and "adaptability for the same use" and "competitive character" as determined under the tests of Zerkowitz, and thus, are "similar" for American selling price purposes. The imported footwear and the "Royal #1" would be accepted as substitutes by an American consumer.

Customs' Position

We agree with the protestant that the "Poly 500," "Star II" and the "Royal #1" are similar to the imported footwear. The protestant appears to concede that our prototype, the "Pro," is also similar to the import. The protestant's assertion that we should use the "Poly 500" as the proper prototype based on the premises that it is similar to the import and is "lower in price" is misplaced. The Treasury Guidelines of 1966 quoted by the protestant direct Customs officers" to select the product... which, in their opinion, is like or most similar to the import." The Guidelines therefore use price as a criteria only when several prototypes are found to be approximately equal in similarity. It is our opinion that the "Pro" is the most similar of the similar domestically produced shoes by a significant margin so the price comparison between the import's FOB and the ASP's of the similar American prototype is not a factor.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E12

077588

It is our opinion that the "Pro" is the most similar domestically produced prototype because its method of construction is more similar to the import than the alternative shoes. The import has a shell molded bottom, i.e., the sidewalls and the outsole are one molded piece. However, instead of stitching the shell molded bottom to the upper, a rubber foxing tape was vulcanized to the upper and to the shell bottom. Since the molded shell bottom is on the outside of the shoe and most of the foxing tape is hidden under the shell and since the shell construction provides the strength to the critical joint between the outsole and sidewall, we consider this import to have primarily a shell molded construction. This is not only our opinion. All Pony catalogs submitted by the protestant describe the "Slam Dunk" as having a "shell mold." It is never described as vulcanized, presumably because that is less significant.

We accept the affidavit of Ricardo Cohn describing the construction of the "Slam Dunk" as having no false statements of fact. However, it is obviously incomplete because it fails to describe the many steps necessary to produce the shell molded bottom before it was vulcanized to the upper. We do not accept his conclusion that "the total operation of the Pony Slam Dunk, Converse Poly 500 and Converse All Star II is 95 percent the same," because these two Converse shoes do not require a shell molded bottom to be made first. We also note that the statement that "the cost of the cold construction is 60 percent to 70 percent higher than the vulcanized construction" is probably accurate, but is irrelevant. The cold process used in the "Pro" is more expensive than the vulcanized construction of the "Converse Poly 500 and All Star II footwear." However, this does not imply the same for the import, the Pony "Slam Dunk," because it required both a vulcanized process and the molding of the shell molded bottom.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E13

077588

We do not agree with the importer's assertion that the "Pro" is higher quality professional footwear while the import is "lower quality, general purpose" footwear. The protestant has not submitted evidence to support this assertion, and our perception is that the two shoes are about equal. It should be noted that even Mr. Cohn states in his affidavit that the construction of the "Slam Dunk" is a "much cleaner and neater operation" than that in the vulcanized shoes which protestant claims are more similar. The protestant also states that the "Pro" had "a substantial volume of returns due to the sole and the canvas breaking apart from each other." This is hardly indicative of "higher quality professional" footwear.

We disagree with the protestant's unsubstantiated statements that the "Pro" and the imported footwear were not commercially interchangeable and were sold through different channels of trade. The protestant has not stated what different channel of trade he believes each shoe was in. The only argument made for the lack of commercial interchangeability is the relative pricing. Assuming retailers took the same 60 percent mark-up on all styles, the retail price in February of 1980 of the high top of each style cited is: the "Pro" at $22.40 ($14 plus 60 percent), the imported Pony "Slam Dunk" at $20.80 ($13 plus 60 percent), the Converse "All Star II" at $20.16 ($12.60 plus 60 percent), the Converse "Poly 500" at $17.60 ($11 plus 60 percent) and the Uniroyal Pro Keds "Royal #1" at $23.20 ($14.50 plus 60 percent). Since the "Pro" the "Star II" and the "Royal #1" are all within 10 percent of the "Pony Slam Dunk," we believe the pricing would have negligible effect on the consumer. The one possible inference that could be drawn is that a consumer who saw the American made "Poly 500" in the store window might be reluctant to purchase the import, the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

885660

E14

"Slam Dunk," due to the 15 percent higher cost of the import. Also because of the far higher unit labor costs in the United States, the ASP law seems to assume that any truly similar import will be lower priced at retail, not higher priced, than the American made shoe.

It is our opinion that the upper of our prototype, the "Pro" is as similar to the upper of the import as the upper of the protestant's prime claimed prototype, the "Poly 500." The "Pro" does have a heavier cotton canvas material than the import and does not have a tricot lining, unlike the import. This is a noticeable difference. However, the "Poly 500" has a polyester upper, (hence the name "Poly 500"), not a cotton canvas upper like the import. This is an equally noticable difference in our opinion.

The uppers of both the "Star II" and the "Royal #1" have loose lined uppers unlike the import. The footwear trade has always considered loose-lined sneakers to be substantially different in their wear and comfort characteristics and their production requirements from non-loose lined sneakers. We agree and thus consider these uppers to be substantially different from the import's uppers.

The protestant states that "Customs compared the imported merchandise to the 'Converse Poly 500' up to 1979." This appears to be true. At this time, we cannot say with any certainty why we did not use the "Pro" as the prototype earlier. Our best guess is that it was not believed to be freely offered prior to 1979. These shipments were in 1980 or 1981. Also, even if it was an error on our part, we do not believe it is grounds for excluding use of the "Pro" for later exports. American selling price is a value issue rather than a classification issue. In the case of Hensel, Bruckmann & Lorbacher, Inc. for Verona Dyestuffs v. United States, 49 CCPA 15, C.A.D. 787 (1962), the court found that a change in appraisement from

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077588

non-ASP to ASP, not just a change from one ASP to another, was not a change of practice even though the product had been previously listed for two years as non-ASP on a "list prepared for public distribution."

With respect to protest No. 1001-2-008652, we conclude that the "Slam Dunk" was properly appraised on the American selling price of the domestically produced "Pro."

Protest No. 1001-2-008653
Protestant's Position

The domestic prototype was not freely offered for sale at the time of exportation of the imported footwear, thus negating the American selling price statutory requirement of a freely offered price.

Alternatively, if the American selling price is found to apply, the protestant claims that the proper domestic prototype on which to base appraisement is the Keds Court Ace Mesh (Ace Mesh).

An examination of the imported footwear and a comparison with the footwear used for appraisement purposes (Whirlwind) and with the claimed footwear (Ace Mesh) shows that the "Ace Mesh" is closer to the imported footwear on the basis of construction, quality, materials, price and appearance.

There is a fundamental difference in the method of construction between the imported footwear and the "Whirlwind" footwear. The imported footwear is made by a process of vulcanization as is the footwear which is claimed to be the proper prototype for the purposes of appraisement, namely the "Ace Mesh." On the other hand, the "Whirlwind" footwear is an injected polyurethane shoe. On the basis of the substantial differences in construction the prototype domestic shoe is legally dissimilar to the imported footwear.

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

077588

F2

Customs' Position

With respect to the claim that the domestic prototype was not freely offered, it is to be noted that pursuant to section 152.24(c)(1), Customs Regulations, the domestic manufacturer has certified that it freely offers its shoes to all purchasers in compliance with section 402 and 402a, Tariff Act of 1930, as amended.

The protestant appears to believe that the "No. 1 Tracy" and "No. 1 Tennis" are shoes for females. The protestant has proposed a single alternate prototype for both styles. That alternate prototype, the "Ace Mesh," is available only in women's and misses sizes as shown on the catalog page submitted by the protestant. However, the "No. 1 Tennis" is actually a men's shoe. This is clear from the invoices included in the protested entries.

The protestant describes both Pony styles as "made by a process of vulcanization." This is a misleading description. Both Pony styles have two color cup or shell molded soles, i.e., the outsole and the sidewalls are molded into one piece. The "two color" effect is achieved by dividing the molding process into two steps, first using the blue and then the white rubbery material. Instead of stitching the shell molded sole to the upper, which is usual, Pony vulcanized a rubber foxing tape to the inside of the shell molded sole and to the fabric of the upper. The construction is much more like the standard molded construction. This is also apparently the opinion of Pony personnel because the Pony Pricelist dated March 1, 1982, described both styles as "Shell Mold" and says nothing about vulcanization.

We find substantial merit in protestant's claim that the "Ace Mesh" is the proper domestic prototype. The comparison of features may be seen in the following columnar format:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077588

F3

	"No. 1 Tracy"	"Whirlwind"	"Ace Mesh"
1. Two Color Bottom? -	Yes	Yes	No
2. Material Bottom? -	Rubberlike	Polyurethane	Rubberlike
3. Double Density Bottom? -	No	Yes	No
4. Simultaneous Injection Construction?	No	Yes	Yes
5. Material of Inside Collar?	Terrycloth	Plastic	Terrycloth

When the original appraisement was made, we considered it very important that the "Whirlwind" had a two color bottom as did the "No. 1 Tracy." This is something very apparent to the potential purchaser. However, the fact that the bottom of the "Whirlwind" is made up of two different densities of polyurethane, not just two different colors of the same material, is also quite significant. Double density bottoms are intrinsically superior to single density bottoms because they can use the heavier density material in the outsole, where it is needed, and they are substantially more expensive because of the complications arising from the different melting temperatures and pressures needed. Therefore, it is our opinion that the "Ace Mesh" is approximately as similar to the "No. 1 Tracy" as the "Whirlwind." We note that the "Ace Mesh" is "closer in price" to the "No. 1 Tracy" than the "Whirlwind" is, as that term is used in the 1966 guidelines dealing with American selling price appaisements.

On this basis, the protestant's claim for appraisement at invoice value should be rejected but the alternate claim of an American selling price at $13 less than 2 percent using the "Ace Mesh" should be accepted. It should be noted that the price of the "Ace Mesh" increased from $12.50 less 2 percent to $13 less 2 percent effective January 1, 1981.

The "No. 1 Tennis" is the same as the "No. 1 Tracy" except that the "No. 1 Tennis" is a men's not a women's shoe. We found the "No. 1 Tennis" to be "most similar" to the "Tornado" at $22.50 less 2 percent. The "Tornado" was made in the same manner as the "Whirlwind"

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

885670

except that it has a lace-to-toe upper configuration, not a Tretorn/ Bal upper, and it is a men's, not a women's shoe. On reconsideration, we are reluctant to use the "Tornado" as the ASP prototype of the "No. 1 Tennis" because of the difference noted with respect to the "No. 1 Tracy" and because of the large visual difference between a lace-to-toe and a Tretorn/Bal upper. We cannot accept the protestant's alternative, the "Ace Mesh," because it is a women's shoe. We note that the Keds Surfer XL (Surfer XL) is another possible domestically produced prototype.

The principle characteristics of the shoes involved are shown in columnar format as follows:

	No. 1 Tennis	Tornado	Surfer XL
1. Two Color Bottom?	Yes	Yes	No
2. Upper Configuration?	Treton/Bal	Lace-to-toe	Bal
3. Upper Material?	Mesh with fabric trim	Mesh with fabric trim	Woven fabric
4. Outsole Material	Rubberlike	Polyurethane	Rubberlike
5. Construction	Shell molded and partly vulcanized	Double Density simultaneous injection	Vulcanized

We find the differences between the "Tornado" and the "No. 1 Tennis" to be approximately as important as the differences between the "Surfer XL" and the "No. 1 Tennis." We note that the "Surfer XL" is closer in price to the "No. 1 Tennis" than the "Tornado."

In view of the foregoing, the proper American selling price is $11 less 2 percent using the "Surfer XL" as the domestic prototype for exports as of January 1, 1981.

HOLDING:

Protest No. 1001-2-008652 should be denied.

Protest No. 1001-2-008653 should be allowed to the extent that the "No. 1 Tracy" should be appraised on the American selling price of the domestically produced "Ace Mesh."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077588

Protest No. 1001-2-008653 should be allowed to the extent that the "No. 1 Tennis" should be appraised on the American selling price of the Surfer XL provided the protestant amends its protest accordingly.

A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffer

Mr. Nathan Wein
HAV International Freight Corp.
45 John Street
Suite 1200
New York, New York 10038

Dear Mr. Wein:

You requested a tariff classification ruling for a lamb's wool sequin sweater on behalf of your client Fairfield-Noble Corporation. You submitted a sample of the sweater along with your letter.

The sample submitted has a shell of lamb's wool fabric that is fully covered with sequins and beads. The rows of sequins and beads do not overlap, consequently some textile is visible. This small area of visible textile is considered an insignificant amount of visible textile, therefore the garment is not ornamented for tariff purposes. Headnote 3(b) of Schedule 3, Tariff Schedules of the United States (TSUS), is noted.

If the sweater is in chief value of the sequins and beads, it is classified under the provision for articles not specially provided for, of beads, of bugles, of spangles, of imitation gemstones, or of any combination thereof, in item 741.5040, TSUS, dutiable at the Column 1 rate of 7.3 percent ad valorem. If the sweater is in chief value of lamb's wool, it is classified under the provision for other women's wearing apparel, not ornamented, of wool, knit, other, valued over $5 per pound, other, in item 384.6360, TSUS, dutiable at the Column 1 rate of 6 cents pound plus 17.5 percent ad valorem. In order to determine the component material in chief value of an article, the value of each component must be ascertained at the time when they have reached such condition that nothing remains to be done to them except put them together. See United States v. Jovita Perez et al., 44 CCPA 35, C.A.D. 633 (1957).

REFER TO

CLA-2:CO:R:CV:G
077607 JAS

Bernard Mandel, Esq.
Attorney at Law
27040 Cedar Road
Beachwood, Ohio 44122

Dear Mr. Mandel:

In a letter dated December 11, 1985, on behalf of your client, HOSE MASTER, INC, you request a ruling on the tariff status of certain corrugated flexible metal hose from Italy. Brochures and other materials were submitted.

You describe this hose as being made from carbon steel strip which is formed and welded to make a tube. The tube is then forced into a turning die to form continuous convolutions of varying pitch that are annular or parallel to each other. This manner of construction is said to result in lesser strain than corrugated hose with helical or continuous spiral convolutions, thus increasing the flexing life of the hose. A sheath of tubular metal braid, woven in basketweave fashion, is designed to fit snugly over a type of this metal hose which is to be subjected to high internal pressure. This braid flexes with the hose and prevents elognation under pressure.

You differentiate corrugated hose, both spiral and annular, from interlocked hose which you state is made from a metal strip that is spirally wound, the edge of the strip being folded to make an interlocking joint. Flexibility is achieved by allowing one interlocking joint to slide within the other. So-called square locked, "S" locked and "M" locked configurations are examples of this type hose. Corrugated hose is suitable for all liquids and gasses, interlocked hose is satisfactory for steam and those thicker liquids where absolute tightness is not essential. Brochures describing the "family" of flexible hose consistently include both interlocked and corrugated types providing evidence, in your opinion, that the commercial meaning of "flexible hose" includes both the interlocked and corrugated types.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

F9

Consequently, you maintain that the provision for flexible metal hose or tubing, whether covered with wire or other material, and with or without fittings, in item 652.09, Tariff Schedules of the United States (TSUS), represents the proper classification of this merchandise. You note that both interlocked and corrugated types appear to be covered by Heading 83.08, Brussels Tariff Nomenclature "FLEXIBLE TUBING AND PIPING, OF BASE METAL, which sufficiently parallels the language of item 652.09, TSUS, so as to be evidence of the legislative history to the provision.

There is some doubt that the cited CCCN language is even applicable. In addition to covering flexible metal tubing and piping -- whereas the concerned TSUS provision relates to hose or tubing -- explanatory notes thereunder covering corrugated flexible tubing and piping, describe a product obtained by stamping or rolling a smooth surfaced pipe. The annular corrugated product about which you inquire is welded to make a tube.

Notwithstanding this, ascertaining the intent of Congress, as you know, is primary in the interpretation of any statutory provision, particularly where such intent is shown to restrict the otherwise more inclusive common meaning of a tariff term. In our opinion, the case of J. E. Bernard & Co., Inc. v. United States, 64 Cust. Ct. 525, C.D. 4029 (1970), confirms Congressional intent to limit the scope of item 652.09, TSUS. In confirming classification of copper tubing, hard covered with tinned copper braid, under the provision for seamless copper pipes and tubes and blanks therefor, in item 613.02, TSUS, the court dismisses an alternative claim under item 652.09 as follows:

> The tariff description "flexible metal hose or tubing", TSUS item 652.09, was legislated from and is substantially the same as the tariff description in paragraph 328 of the Tariff Act of 1930. (Tariff Classification Study, Schedule 6, page 200). Summaries of Tariff Information are a recognized source of resolving questions relating to the meaning and scope of terms which appear in various tariff acts, and in determining the intent of Congress. In the Summary of Tariff Information 1929, Schedule 3, compiled by United States Tariff Commission for the use of the House Committee on Ways and Means, at page 702, there appears the following pertinent heading and discussion:

077607

F10

THIS DOCUMENT MAY BE RELEASED TO THE
F-

FLEXIBLE METAL TUBING OR HOSE

> Description and uses. - Flexible metal tubing is made from a continuous metal strip spirally wound and formed in a single or double groove. The edges of the strip are turned in so as to make an interlocked joint...

It therefore appears that the provision in item 652.09 was intended to encompass only flexible metal hose or tubing of interlocked construction.

For these reasons, and noting the Schedule 6, Part 2, Headnote 3(e), TSUS, definition for "pipes and tubes and blanks therefor", which includes tubular products of any cross-sectional configuration, whether seamless, brazed or welded, the subject annular corrugated stainless steel flexible hose is classifiable under the provision for pipes and tubes and blanks therefor, of iron or steel, not suitable for use in the manufacture of ball or rolling bearings, in item 610.52, TSUS, dutiable in 1985 at the rate of 9.3 (now 8.4) percent ad valorem, plus additional duties depending on alloy content.

Sincerely,

for Harvey B. Fox
Director, Classification
and Value Division

Ms. Annal M. Frenz
Sales Manager
Al Frenz Associates, Inc.
11434 S.W. 33rd Avenue
Portland, Oregon 97219

Dear Ms. Frenz:

This is in further reference to your letter of November 15, 1985, concerning the tariff classification of anti-theft apparatus for automobiles which the New York region has forwarded to us for reply.

The anti-theft systems in question come in two versions, the B-1 Black Box and the C-1 Black Box. These systems include a computerized alarm component which is installed inside a car. This component is wired to the car with its own back-up battery system, and in addition to providing an alarm through motion, sound or electrical circuit interrupt detectors, it prevents the car from being started with a key or hot wiring. The B-1 differs from the C-1 in that it has an anti-hijack feature. This feature will automatically cut off the engine within a programmed distance if, while the car is running, the driver's door is opened. The B-1 is intended primarily for commercial vehicles.

The C-1, which is primarily for consumers, has two additional units, a remote control unit and a pager. The remote control unit allows the system to be activated outside of the car or placed in a mode which allows the alarm to sound on the pager worn by the car owner and not at the car itself while a theft is attempted.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

F12

The C-1 Black Box together with the remote control unit and pager, but exclusive of the batteries, would be regarded as an entirety classifiable under a single tariff item. This system and the B-1 Black Box are classifiable under the provision for electrical articles, not specially provided for, in item 688.42, Tariff Schedules of the United States (TSUS). This is not a Generalized System of Preferences (GSP)-eligible item for products of Taiwan and the current applicable column 1 rate of duty is 4.1 percent ad valorem. Batteries are separately classifiable under the provision for primary batteries in item 682.95, TSUS, which is a GSP-eligible item for products of all beneficiary developing countries and which otherwise currently requires a column 1 rate of duty of 5.7 percent ad valorem.

Sincerely,

Arthur J. Shaffer

Re: Decision on Protest and Application for Further Review
Number 3001-5-000422

Dear Sir:

The above noted protest and application for further review was filed by counsel for protestant Latex Glove Co., Inc., of Northbrook, Illinois. At issue is the classification of a plastic-coated cotton glove which is imported from Hong Kong.

Customs claims that the glove is properly classifiable as gloves ... : of vegetable fibers: made from a pre-existing machine-knit or -woven fabric, or any combination of such fabrics: woven, under the provisions of item 704.40, Tariff Schedules of the United States (TSUS), dutiable at the rate of 25 percent ad valorem. Importation under this tariff provision of a glove which is the product of Hong Kong is subject to the restrictions of quota category 331, in that a visa from the country of origin must be obtained in order to permit its entry into the United States.

Protestant claims that the glove is properly classifiable as gloves of rubber or plastics: other, under the provisions of item 705.86, TSUS, dutiable at the 1985 rate of 19.3 percent ad valorem. Any glove classifiable under this tariff provision is not subject to quota restrictions.

FACTS:

On May 21, 1985, protestant Latex Glove filed entry number 85-432126, covering a shipment of subject glove style 122/4244M. On August 7, 1985, redelivery of the shipment was requested because Customs found protestant's claimed classification to be incorrect. Protestant entered the gloves under the classification of other gloves of plastic under the provisions of item 705.86, TSUS. Customs determined that these gloves were more properly classifiable as gloves of vegetable fibers under item 704.40, TSUS. Additionally, classification of the gloves under the textile provision imposed visa requirements on their entry into the United States. Inasmuch as no visas had been obtained, redelivery was requested. This protest and application for further review was timely filed in response to the denial of entry.

RELEASED TO THE PUBLIC

ISSUE:

Is the glove properly classifiable as gloves of rubber or plastics under item 705.86, TSUS, or as gloves of vegetable fibers, under item 704.40, TSUS, and thereby subject to visa requirements pursuant to textile quota category 331?

ANALYSIS:

Style Number 122/4244M is composed of a base fabric of plain woven cotton. Both sides of the base fabric have been napped. The exterior of the base fabric is coated with yellow plastic, with the exception of the back of the three middle fingers which is coated with an orange plastic. Textile fibers from the nap penetrate through the coating. Tactilely the sample is furry or fuzzy. The weave construction is barely visible through the plastic.

A uniform and established practice exists to classify this style of glove as gloves of rubber or plastic. See Customs Ruling Letters of December 19, 1973 (Control No. 029939) and September 16, 1986 (Control No. 077460).

HOLDING:

Pursuant to a uniform and established practice, glove style 122/4244M is classifiable as gloves of rubber or plastics: other, under the provisions of item 705.86, TSUS, dutiable at the 1985 rate of 19.3 percent ad valorem. Gloves classifiable under this tariff provision are not subject to quota restrictions.

Accordingly, the protest is allowed. A copy of this decision should be given to the protestant when notice of action is given on Customs Form 19.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

077682

TO : Area Director of Customs
JFK International Airport
Jamaica, New York 11430

FROM : Director, Classification and Value Division

SUBJECT: Tariff Classification of Loepfe Electronic Yarn Clearers, FR-60 and FR-600, Made In Switzerland, Imported By American Lamprecht Transport Inc., In Entry Nos. 84-396423, 84-947092, and Others Which Have Become The Subject Of Several Pending Protests

This merchandise was the subject of a rate advancement notice dated September 17, 1984, issued by Team II, in which you proposed to classify the merchandise as an entirety under the provision for optical electrical measuring or checking instruments and apparatus, in item 712.05, Tariff Schedules of the United States (TSUS). The merchandise consists of a control unit, electronics and wiring units and optical sensing heads. These control cutting apparatus for removing snags from yarn before it is wound.

In view of the decision in EAC Engineering v. United States, 623 F. Supp. 1255 (1985), this type of merchandise can no longer be regarded as optical because it fails to meet the so-called fourth Engis criterion which requires a picture or image in order for merchandise to qualify as optical goods. Therefore, the merchandise should continue to be classified as a part under item 670.74, TSUS, with duty assessed at the rate for textile reeling machines, etc., in item 670.12, TSUS.

Please furnish a copy of this decision to the protestant by attaching a copy to the Form 19 Notice of Action for the lead protest.

077689

Louis S. Schoichet, Esq.
Siegel, Mandell & Davidson, P.C.
One Whitehall Street
New York, New York 10004

Dear Mr. Schoichet:

On behalf of Avon Products, Inc., you have requested reconsideration of ruling 075466 of January 13, 1986, which determined that certain disposable plastic boxes known as Rolykits are properly classifiable as flat goods under item 706.61, Tariff Schedules of the United States (TSUS). The term flat goods is defined as follows in Headnote 2(c) of Subpart 1D, Schedule 7:

> (c) the term 'flat goods' covers small flatwares designed to be carried on the person, such as banknote cases, bill cases, billfolds, bill purses, bill rolls, card cases, change purses, cigarette cases, coin purses, coin holders, compacts, currency cases, key cases, letter cases, license cases, money cases, pass cases, passport cases, powder cases, spectacle cases, stamp cases, vanity cases, tobacco pouches, and similar articles.

It is your position that these boxes are properly classifiable under item 772.20, TSUS, as containers; or, alternatively, under item 772.15, TSUS, as household articles or item 774.55, TSUS, as articles of rubber or plastics. A ruling on the classification of these articles was originally given in file 810275 of October 5, 1984 (revoked in file 075466), to Rolykit, Inc., Division of Hagemeyer of Canada and the Netherlands. At this point, entry has already been made.

It is our understanding that the name Rolykit is applied to certain boxes custom manufactured by Hagemeyer in the Netherlands and protected by international patent. They are made in various sizes and shapes to accommodate different types of articles. All are designed to be folded up and to interlock in such a way that their contents will remain in separate compartments.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G4

You have made a number of submissions in this matter, both oral and written, on behalf of Avon Products, the importer of record. You have stated that the Rolykit boxes were to be imported empty to be filled with Avon cosmetics, and you submitted a filled sample as well as an empty one. The box, which is marked "Made in Holland," is hinged, of rigid plastic, measuring 4-1/2 by 2-3/4 by 1-3/4 inches when closed. When the box is opened, the hinges allow its five separate sections to lie out flat in a row; the unit then measures about ten inches in length. To close the box, one rolls the sections over one on top of another. Whether it is rolled up or opened out flat, its construction assures that the contents of each section will remain in place. When opened out flat, the filled Rolykit contains, in the first section, two shades of powder blush and a brush; in the next, an eyeliner pencil; in the next, eight shades or powder eye shadow; in the next, two eye shadow applicators; and in the last, a stand-up mirror and a mascara. The filled Rolykits were to be marketed by Avon as the "Ultra Wear Colors-to-Go Makeup Kit" in two versions, the "On-the-Town Collection" and the "In-the-Country Collection," each having a different set of colors contained in the removable blush and eye shadow inserts. You stated that they were offered as a sales premium to provide the opportunity for Avon customers to get a broad sampling of products at an attractive price; the submitted Christmas 1985 Avon catalog advertises the Makeup Kits on pp. 2-3 for $7.99 with a $15 purchase. The boxes appear to be of a light, inexpensive plastic; you stated that they cannot be refilled, are not designed to be reusable, and were offered for sale for a limited time only. Avon does not manufacture or market replacement cosmetics for the boxes, which were expected to be discarded once the contents were exhausted.

In your most recent letter, of January 30, 1986, you object to the ruling in file 075466 on the grounds that the Rolykits were there "considered to be compacts." In fact, what was stated in the ruling was that the Rolykits are more similar to the compacts referred to in Headnote 2(c), above, than to the travel goods contemplated by Headnote 2(a). We note once again the Avon Marketing Profile 33868P of July 6, 1984, revised November 21, 1984, in which the Rolykit box was in fact referred to as a "custom compact," a "compact case," a "hinged compact," the "Rolykit custom compact," and a "compact kit." The range of articles classifiable as flat goods is not limited to those listed eo nomine in Headnote 2(c) as the list concludes with the words "and similar articles."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

GS

089140

You further state that you believe the Rolykits are analogous to the powder boxes previously held classifiable under item 772.20, TSUS. We cannot agree, as those articles were not folding, hinged boxes and were in no sense portable.

The classification of the Rolykit boxes in question here as flat goods in file 075466 was correct, and we hereby reaffirm it.

Sincerely,

John T Rath

Mr. Robert C. Lightbourne, O.J.
Textiles of Jamaica Ltd.
35 Lady Musgrave Road
Kingston 5
Jamaica, West Indies

Dear Mr. Lightbourne:

This is in response to your letters of January 30 and March 24, 1986, in which you request a ruling on the country of origin, for tariff purposes, of certain finished fabric.

Your submission elaborates on information provided in your letter of December 9, 1985. The fabric received in your factory is greige woven filament which you process into a georgette material suitable for use in dresses. All processing functions are performed in Jamaica. The raw fabric is not a product of Jamaica.

You describe the processes applied to the raw fabric beginning with a scrubbing operation to remove oil, grease and dirt. After the water is removed, the fabric undergoes a steaming to enhance softening. The steaming promotes full relaxation and shrinkage of the material.

The product is then transferred to chambers where it is dried and heated to prepare for a weight reduction process. Weight reduction involves heating with chemicals followed by curing to ensure even weight distribution in the product.

Subsequent to weight reduction, the fabric is washed and jet dyed. There is no indication in your description that printing of the fabric occurs in addition to the dyeing. Scrutiny of the samples confirms that fact. After dyeing, the material is again heated and washed. The water is extracted and the fabric is treated with an anti-static additive. The finished product is then inspected, rolled and packed.

You contend that a substantial transformation occurs through the finishing operations applied to the raw fabric in Jamaica.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G1

Section 12.130(e)(1) of the Customs Regulations (19 CFR 12.130(e)(1)) provides that "material will be a product of a particular foreign ... country ... when it has undergone prior to importation into the United States in that foreign ... country ... the following: (i) Dyeing of fabric and printing (emphasis added) when accompanied by 2 or more of the following finishing operations : bleaching, shrinking, fulling, napping, decating, permanent stiffening, weighting, permanent embossing or moireing."

The process you describe does not include both dyeing and printing. The subject georgette material undergoes dyeing only. As such, it is precluded by regulation from being a product of the country where the finishing operations are performed. Because dyeing and printing operations are not performed on the fabric, it is unnecessary to consider whether two other finishing operations also occur. The georgette material is considered, for tariff purposes, to be a product of the country where the raw greige material was made.

Sincerely,

Harvey B. Fox

Re: Decision on Application for Further Review of Protest No. 3901-5-001143

Dear Sir:

This protest was filed against your decision in the liquidation on May 5, 1985, of entry No. 85-513859-6 dated April 2, 1985, and in the liquidation on May 24, 1985, of entry No. 85-513921-0 dated April 3, 1985, covering a shipment of cowhide leather cases manufactured in Taiwan.

FACTS:

The merchandise involved is a leather case for a portable pocket-size radar detection device. It is imported empty and measures 6-1/2 inches by 5-1/2 inches by 3/8 inch lying flat. It was classified in liquidation under the provision for other luggage of leather in item 706.13, Tariff Schedules of the United States (TSUS).

The protestant claims that the leather case is properly classifiable under the provision for bags, baskets, boxes and cases, all the foregoing, not specially provided for, of leather in item 791.65, TSUS.

ISSUE:

Does the leather case fall within the purview of Schedule 7, Part 1, Subpart D, Headnote 2(a)(ii), TSUS?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

LAW AND ANALYSIS:

Schedule 7, Part 1, Subpart D, Headnote 2(a)(ii), TSUS, provides that for the purposes of the tariff schedules -- (a) the term 'luggage' covers -- (ii) brief cases, portfolios, school bags, photographic equipment bags, golf bags, camera cases, binocular cases, gun cases, occupational luggage cases (physicians; sample, etc.), and like containers and cases designed to be carried with the person, except handbags as defined herein;"

Protestant's Position

The case is not similar to any of the exemplars listed in the headnotes to the luggage provisions of the schedules. It is designed either for the storage of the radar kit or the containment of the kit within luggage such as brief case. The case has no strap, handle or other device for use in carrying and the use of the case to carry the kit by hand is a fugitive use contrary to the actual use of the case. Clearly, the item is not designed to be carried with the person but rather is a "case" more properly provided for under item 791.65, TSUS.

The leather case in issue is similar in design and function to the tire gauge case which was held to be classifiable under item 791.65, TSUS, rather than as luggage in Headquarters Ruling Letter (HRL) 072664 dated August 6, 1983. The tire gauge case is analogous to the leather case in issue because while both were designed to contain items that

077730

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G10

could be carried on the person, the cases themselves were not designed to be carried on or with the person but rather either stored in a glove compartment or in a briefcase.

Unlike the exemplars set forth in Schedule 7, Part 1, Subpart D, Headnote 2(a)(ii), TSUS, supra, the leather cases do not have handles or straps for carrying as do all of the other articles.

The leather cases are not "handbags" because they are not customarily carried by women or girls' and are not ejusden generis with the exemplars of handbags set out in Schedule 7, Part 1, Subpart D, Headnote 2(b). Also, the term "handbag" has been construed to cover all types of bags carried on the hand or on the arm. United States v. J. E. Mamiye & Sons Inc., 69 CCPA 17, 665 F.2d 336 (1981). The leather cases are not carried in the hand or on the arm as are the exemplars specified in Headnote 2(b), but rather are cases designed to hold the components of the kit when not in use.

The leather cases are not ejusdem generis with the exemplars for luggage set out in Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), TSUS. They cannot be locked or securely fastened and can never be checked as baggage on trains, buses or planes as would the listed exemplars. The leather cases are not suitable for carrying personal effects during travel because they have no handle or lock. See Adolco Trading Co. v. United States, 71 Cust. 145, C.D. 4487 (1973).

077730

G11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

In HRL No. 062224 of June 22, 1979, Customs classified leather tool cases and owners manual cases under item 791.65, TSUS. These cases were also for use in automobiles and no attempt was made by customs to classify these cases as luggage.

In HRL No. 056371 of May 17, 1978, Customs ruled that leather tool kits measuring 23 inches by 19 inches with two 6-3/4 inch flaps were classifiable under item 791.65, TSUS. Also, in this ruling a leather case stored in the tool kit measuring 9-3/4 inches by 6 inches designed for holding small light bulbs and fuses was classified under item 791.65, TSUS. Additionally, a leather case for an automobile owner's manual, vehicle registration and other purposes measuring 12-3/4 inches by 9 inches with two compartments that folded in half to close was classified under item 791.65, TSUS. The description of this case is very similar to the merchandise in issue. It should be noted that in all these instances there was no discussion as to the possibility of classifying these items as luggage.

Customs' Position

It is our view that the leather case is primarily designed to be carried with the person with a secondary function as a storage case. It is constructed to contain a radar detection system which is unique because of its portability. The protestant's description and the sales literature submitted indicate that the radar detector is

077730

G12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

intended to be carried with the user. Without the case, it would be cumbersome to transport the pieces constituting the radar detection kit. That is why the fitted leather case is designed to carry the kit. This intended design as a carrying case is supported by the sales literature which refers to the leather case as a "travel case". Indeed, the owner's manual advises that it is preferable to take the device when you leave the car.

In response to protestant's assertion that all the exemplars listed in Schedule 7, Part 1, Subpart D, Headnote 2(a)(ii), TSUS, have handles or straps for carrying, we note that portfolios often do not have handles.

We do not see a close similarity in function between the instant leather case and the tire gauge case ruled in HRL 072664. There it was determined that the tire gauge case was intended primarily to be stored in the glove compartment and was not commonly carried on the person like a flat good. The radar detector case is carried with the person to supply the required portability to the radar detection kit. Storage in a glove compartment is not analogous to transportation in a brief case.

The protestant's citations of the Adolco and Mamiye cases, supra, are not relevant because we do not propose to classify the leather case as a handbag. Also, we are not comparing the leather case to the exemplars in Headnote 2(a)(i). It should be noted that in Adolco, supra, the court went on to describe the exemplars in Headnote 2(a)(i) as containers or cases which are designed to hold specific items

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

077730

613

which give them their names and which are designed to be carried with the person. The radar detector case appears to meet that definition even though it does not have a handle or carrying strap.

HRL No. 062224 of June 22, 1979, and HRL 056371 of May 17, 1978, involved the classification of leather tool cases and owner's manual cases for use in automobiles. Classification as luggage was never considered because the articles were not designed for the transportation of their contents. Unlike the subject case which gives the required portability to its contents, the leather tool cases and owner's manual cases supplied a place to conveniently organize and store their contents.

HOLDING:

The leather case is like the exemplars listed in Headnote 2(a)(ii), TSUS, and therefore classification under item 706.13, TSUS, was appropriate.

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Harold I. Loring, Esq.
Grunfeld, Desiderio, Lebowitz & Silverman
Two World Trade Center
Suite 2238
New York, New York 10048-0654

Dear Mr. Loring:

On behalf of Ruby International, you have requested a tariff classification ruling for several articles of men's apparel to be imported from Colombia and other countries. You have made written and oral presentations on behalf of your client.

All the garments in question are of 100 percent cotton fabric of knit construction, either plain interlock, 1 x 1 rib, 2 x 2 rib, or net. You have submitted samples in various colors of the following styles:

Label	Style No.	Description
Playboy VIP	3200	Athletic shirt
Playboy VIP	3397	Net athletic shirt
Playboy VIP	3399	Net crew neck shirt
Playboy VIP	3400	Net briefs (low-rise fly front)
Spalding	8497	Athletic shirt
Spalding	8498	Muscle shirt
Spalding	8499	Crew neck T-shirt
Spalding	8500	Briefs (low-rise fly front)

A3

It is your position that all these garments should be classified as underwear for customs purposes. You have stated that Ruby International deals exclusively in underwear; that the garments are packaged, advertised, and sold as underwear; and that the construction and design of the garments indicate that they are intended to be worn as underwear. You have submitted advertising materials showing models wearing the briefs alone and the briefs and shirts together.

In determining what constitutes underwear, Customs has taken the position that the term refers to garments ordinarily worn under other garments and not exposed to view when the wearer is conventionally dressed for appearance in public, indoors or out of doors. Whether or not a garment is worn next to the body of the wearer is not determinative; swimwear and diapers are so worn, but are not classified as underwear. This position is consonant with the holding of Children's Hose, Inc. v. United States, 55 Cust. Ct. 6, C.D. 2547 (1965), that articles at least partially exposed during normal wear were not classifiable as underwear.

We agree with your position with regard to styles 3400 and 8500, briefs. These garments are classifiable as underwear, as their design would preclude their being worn alone. Style 3400, constructed from net fabric, is classifiable under item 378.0540, Tariff Schedules of the United States Annotated (TSUSA), quota category 352, as men's or boys' cotton net underwear. Style 8500, constructed from 1 x 1 rib knit fabric, is classifiable under item 378.1030 or item 378.1510, TSUSA, both quota category 352, according to whether it is valued over $4 per pound, as other men's and boys' cotton knit underwear, not ornamented.

We do not agree, however, with your views with regard to the classification of the shirts that are the subject of this ruling. As indicated above, Customs has taken the position that garments exposed to view during ordinary wear are not classifiable as underwear. While these athletic shirts, T-shirts, pullover shirts, and muscle shirts are purchased and worn as underwear, they are purchased and worn as outer garments as well. Interviews with retailers and manufacturers,

RELEASED TO THE PUBLIC

A4

newspaper and magazine advertising, and experience all indicate that shirts like those in question here have multiple uses. Shirts in vivid colors are in fact less broadly useful as underwear than are white ones; they cannot, for instance, be worn under white or other light colored dress shirts without showing through.

Reliance on Mast Industries, Inc. v. United States, --CIT--, Slip Op. 85-114 (October 28, 1985), is misplaced here. In that case the court found, "[h]aving examined all of the exhibits, and having heard all the testimony and judged the credibility of the witnesses," that a women's garment was "designed, manufactured, marketed and used as nightwear," and was so classifiable. A unique garment, adapted from a European-designed nightwear garment, made of a special fabric, and sold exclusively in a particular intimate apparel store, was in question there. The shirts the subject of this ruling are types very common in the United States. We cannot say that basically the same garment is sometimes classifiable one way, sometimes another, merely because it is advertised or packaged or worn sometimes one way, sometimes another. The court has stated repeatedly that the manner in which an article is merchandised is a factor to be considered in its classification, but is not determinative.

Style 8499, a crew neck T-shirt constructed from plain interlock fabric, having short, set-in, hemmed sleeves, a hemmed waist, and rib knitting at the neckline, is classifiable under item 381.4010, TSUSA, quota category 338, as other men's wearing apparel, not ornamented, cotton knit T-shirts.

Style 3399, a pullover crew neck shirt, of fabric of net construction, with short set-in, hemmed sleeves, a hemmed waist, and rib knitting at the neckline, is not considered a T-shirt for tariff purposes because of the net fabric. It is classifiable under item 381.0240, TSUSA, quota category 338, as men's net wearing apparel, of cotton, knit, other shirts.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

AS

077733

Style 8498, a sleeveless crew neck pullover shirt, sometimes called a muscle shirt, constructed from plain interlock knit fabric, has rib knitting at the neckline and armholes, and a hemmed waist, and is classifiable under item 381.4130, TSUSA, quota category 338, as other men's wearing apparel, not ornamented, cotton, knit, other shirts, other. Styles 3200 and 8497, athletic shirts, are sleeveless pullover garments with oversized armholes, a scoop or U-shaped front neckline, a back neckline just below the nape of the neck, and shoulder straps in widths ranging from one to two inches. Both are constructed from 2 x 2 rib knit fabric with hemmed waists and neckline, and armhole openings capped with plain knit material. They are classified in the same provision as the muscle shirts.

The traditional white athletic shirt, not the subject of this ruling, has virtually no use as an outer garment, and is classifiable as underwear.

Style 3397 is an athletic shirt like those described above, except that it is made of fabric of net construction and is finished at the waist with a simple overlock stitch rather than with a hem. It is classifiable under the same item as the pullover net crew neck shirt.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

TO : Area Director of Customs
JFK Airport, New York 11430

FROM : Director, Classification and Value Division

SUBJECT : Internal Advice Request 87/85 Concerning the Classification of "Barbie Sticker Album" and Sticker Packet Inserts.

This is in response to your request, dated December 6, 1985, requesting Internal Advice on the tariff classification of merchandise identified by the importer as a "Barbie Album" and sticker packet inserts. This request was initiated by a letter dated October 11, 1985, from Baker & McKenzie, attorneys for the importer, Panini, U.S.A.

We are in agreement that the album and stickers should not be classified as an entirety and that the stickers are separately classifiable under the provision for other flat shapes and forms, which are pressure-sensitive, in item 790.55, Tariff Schedules of the United States (TSUS).

We are also in agreement with your position that the albums and insert packets do not satisfy the criteria necessary for classification as toy books or other toys.

In light of Arthur Kessler & Co., Arthur J. Fritz & Co v. United States, C.D. 3944, in which a scrapbook is defined as "a blank book" in which miscellaneous items (such as newspaper clippings or pictures) may be pasted or inserted, the "Barbie" sticker albums are inappropriately classifiable under the provision for other scrap albums, in item 256.60, TSUS. The "Barbie" albums of this case are dedicated to receiving certain pre-determined printed stickers and are not available for the insertion of miscellaneous items.

On the other hand, in using the definition of blank book as described by the Kessler decision, the albums in this case could appropriately be considered a blank book. There is no

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A7

reference to "writing" in the court's unrestricted description of a blank book. Although the use for blank books has been considered to be for writing and record keeping purposes (see Summaries of Trade & Tariff Information, T.C. Publication 294, 1969), the term "blank" can be considered merely as surface space not utilized.

In view of the foregoing, the "Barbie" album with blank space for the insertion of particular stickers is appropriately classifiable as a blank book in item 256.58, TSUS. The pressure-sensitive stickers are separately classifiable in item 790.55, TSUS.

You should inform the inquirer of this ruling.

Sincerely,

Arthur P. Schaffner

55 Erieview Plaza
Cleveland, Ohio 44114

Re: Request for Further Review of Protest No. 4101-4-000025, dated September 19, 1984

Dear Sir:

This protest concerns the tariff classification of nine aluminum pastes composed of aluminum and solvent that are used in various products such as metallic paint for automobiles. All are products of West Germany.

These articles were at first classified under item 473.88, Tariff Schedules of the United States (TSUS), as other pigments not containing lead, but were reclassified under then item 407.16, TSUS, as benzenoid mixtures, with the rate of duty taken from item 402.36, TSUS, based on the alkylbenzene content. The importer protests this reclassification, claiming that the products contain only aluminum and natural distillate solvent without dutiable benzenoids, or that any amounts of dutiable benzenoids present are only de minimis. After the request for further review of the protest was received in this office, counsel for the importer, Obron Corporation, added another claim, submitting that there existed for at least four years prior to 1983 a uniform practice of classifying the involved merchandise as pigments under item 473.88, TSUS, and that Obron is entitled to notice of the change in classification under 19 CFR 177.10(c) before any entries can be liquidated under the higher rate of duty for benzenoid mixtures.

Part 9 of Schedule 4, TSUS, covers pigments. Headnote 1 of this part provides:

> Any product described in this part and also in Part 1 of this schedule is classifiable under said part 1 . . . .

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A9

Thus if any pigments the subject of this protest are described in Part 1, Benzenoid Chemicals and Products, of Schedule 4, they must be classified there rather than in Part 9. Headnote 1 of Part 1 makes the same provision:

> . . . all products described in this part shall be classified hereunder even if more specifically described elsewhere in this schedule.

These two headnotes indicate a clear legislative intent to give preference in classification to the provisions of Part 1 of Schedule 4 where they apply.

Headnote 3 of Part 1, Schedule 4, provides:

> With the exception of the natural products provided for in Subpart C, this part does not cover cyclic organic chemical products . . . having a benzenoid, quinoid, or modified benzenoid structure, which are produced from animal or vegetable products in which such structure occurs naturally, unless such cyclic organic chemical products were obtained, derived, or manufactured in part from any product provided for in Subpart A, B, or C of this part.

Headnote 1 of Schedule 4, Part 1, Subpart B, Industrial Organic Chemicals, provides:

> The provisions of items 402.00 to 406.63, inclusive, in this subpart shall apply not only to the products described therein when obtained, derived, or manufactured in whole or in part from products described in Subpart A of this part, but shall also apply to products of like chemical composition having a benzenoid, quinoid, or modified benzenoid structure artificially produced by synthesis . . . .

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077788

A10

Thus, according to Headnote 3, above, those aluminum pastes containing a natural distillate solvent are not provided for in Part 1, Schedule 4, and are properly classifiable under Part 9, Subpart B, Pigments and Pigment-Like Materials. Customs laboratory analysis shows that the pigments known as Stapa 3, Stapa 3000/47 Super Silver, and Stapa Offset 3000 Super Silver contain only aluminum and a natural distillate solvent with no benzenoid structure; they are thus provided for under item 473.88, TSUS.

Following Headnote 1, above, those aluminum pastes containing synthetic benzenoid solvents are provided for in Part 1, Subpart B. Item 407.16, TSUS, covers "mixtures in whole or in part of any of the products provided for" in Subpart B; the aluminum pastes known as Stapa R-167, Stapa R-277, Stapa R-476, Stapa R-607, Stapa 33313/G, and Stapa MRVP 41180/G have all been shown by laboratory analysis to contain synthetic solvent, and are properly classified under that item.

The importer also claims that the amount of synthetic benzenoids in the pastes should be considered de minimis. General Headnote 9(f)(iv), TSUS, provides that an article "in part of" a material contains a significant quantity of the named material, and that the de minimis rule applies. However, analysis shows that those aluminum pastes that have been reclassified under item 407.16, TSUS, contain between 19.4 percent and 33.4 percent dutiable benzenoid by weight. We do not consider these amounts to de minimis for customs purposes. The importer claims that the only function of the synthetic benzenoids in the aluminum pastes is to make them safe to handle. However, aluminum flake in dry form does exist; further, the solvent aids in the processing of the paste.

In support of Obron's claim that Customs has had a uniform practice of classifying these aluminum pastes under item 473.88, TSUS, counsel has presented a list of approximately 100 entries made from 1979 to 1983 at the ports of New York, Chicago, Detroit, and Newark, covering at least three of the products involved in this protest, R-167, R-277, R-607, all liquidated under that item. Counsel also finds support in the determination by the Court of Appeals Nos. 86-602/650, decided July 8, 1986, affirming Heraeus-Amersil, Inc. v. United States, 617 F. Supp. 89, --CIT-- (1985), that a

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A11

077788

uniform and established practice in favor of the plaintiff existed after over 300 liquidations at two ports over a period of at least ten years.

Neither Obron's list of liquidated entries, nor the court's determination in Heraeus-Amersil, nor any other factors persuade us that there had existed a uniform and established practice of classifying these aluminum pastes, containing dutiable benzenoids, as pigments.

Heraeus-Amersil is distinguishable on its facts. It concerned approximately 300 liquidations over ten years, as opposed to 100 over four years in this case. There is no magic formula of numbers that will automatically produce an actual uniform and established classification practice, and when other factors than period of time and number of entries are considered in the context of this protest, they also weigh against the protestant. The lower court in Heraeus-Amersil found, at 617 F. Supp. 89, 92, that there was no evidence of any imports of the glass at ports other than the two in question, Newark and JFK; that not only plaintiff's merchandise but all merchandise similar to plaintiff's had been classified under the same two TSUS item numbers before the change; and that there was no evidence that that product, entered by the plaintiff or anyone else, had ever been classified under the "new" provision previously.

The situation with regard to the classification of aluminum pastes is quite different. There are other suppliers than Eckart-Werke and other importers than Obron, and Customs has for some time been classifying these products according to the nature of the solvents they contain. C.I.E. 1271/59 determined that aluminum paste containing pure mineral spirits was classifiable under a provision for pigments, paragraph 66, of the Tariff Act of 1930. C.I.E. 7/64 determined that aluminum pastes in mineral spirits were classifiable under item 473.88, TSUS. Customs laboratory reports in 1971 and 1972 on samples of aluminum pastes indicated the presence of dutiable benzenoid components in the solvents. A form 6431 inquiry from Cleveland in 1977 resulted in the classification of aluminum pastes under item 473.88, TSUS, when laboratory results indicated the solvent to be natural mineral spirits. The reply to a 1980 Form 6431 inquiry indicated that the grade of aluminum paste in question had not been tested and that

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077788

item 473.88, TSUS would be appropriate if the solvent were a natural mineral spirit. Similar reports from 1980, 1981, and 1983 indicated that spec sheets supplied by importers might not be sufficient to determine whether the pastes contained dutiable benzenoids, and that laboratory testing would be necessary to answer the question. In a decision on an application for further review of a protest filed in 1982 on 1981 entries, file 072623 determined that entries of aluminum paste having a solvent containing dutiable benzenoids had been properly liquidated under item 407.16, TSUS, as benzenoid mixtures.

Thus Obron's claim that its history of liquidated entries under item 473.88, TSUS, points up the existence of a uniform and established classification practice on the part of Customs is not substantiated. What is shown is rather that Customs liquidated a number of entries of a few aluminum pastes as entered. We note that section 141.87 of the Customs Regulations, 19 CFR 141.87, requires that whenever the classification of merchandise depends on component materials, the invoice must give a breakdown of each component in sufficient detail to determine the correct duties. As indicated above, Headnote 1 of Part 9, Schedule 4, requires classification in Part 1, and not Part 9, of products described in both parts. Whether a product is described in Part 1 will depend on its composition. Copies of entry documents filed by the importer do not show that any such information was provided; the only descriptions given are the name of the product, such as Aluminum Paste Stapa Metallux R 227. Given that Customs had already, for some time, been classifying aluminum pastes according to the nature of their solvents, a different classification would have resulted if the true nature of the solvent had been stated as required by the regulations, or if Obron had come forward with full information and sought a ruling.

Thus, this protest does not involve a ruling effecting a change in practice within the meaning of 177.10(c), requiring advance notice, as the importer claims. There is no new interpretation of law here; rather, this decision concerns a determination of fact: exactly what was the nature of the solvent in the aluminum pastes imported by Obron? The answer

077788

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

to this question had to be found through Customs laboratory analysis. Counsel for Obron states that the firm has imported "the same merchandise" since 1978. When Customs subjected that merchandise to laboratory analysis, it was found to contain dutiable benzenoids in the solvent. Thereafter, the merchandise was classified according to the pre-existing rules.

Therefore, you should deny the protest, except to the extent that reclassification of Stapa 3, Stapa 3000/47 Super Silver, and Stapa Offset 3000 Super Silver under item 473.88, TSUS, results in a partial allowance. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Canada

Dear Mr. Pamerleau:

This is in further response to your letter of January 7, 1986, on behalf of A&L Phototypesetting Ltd. which the New York Region has referred to us for a reply. You requested information concerning the dutiable status of an educational article called the Arithmos.

The Arithmos is an abacus-like plastic frame with plastic numbered blocks which slide along plastic cross members. The instructions state that the article incorporates three teaching devices, the hundred bead abacus, the numbered hundred board and the multiplication matrix chart. The article is further described as a self-teaching aid for comprehension of basic mathematic concepts for students in various age brackets.

This merchandise is classifiable under the provision for nonmetal calculating instruments in item 710.60, Tariff Schedules of the United States (TSUS). The column 1 rate of duty required under that provision and applicable to products of Canada is 4.7 percent ad valorem.

A duty exemption may be available under item 851.15, TSUS, for certain educational articles imported for the use of public or nonprofit institutions. However, such articles must be fabricated to specification, as well as designed for the classroom instruction of children. The materials submitted

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B1

concerning the Arithmos indicate that it is of general purpose and function, rather than fabricated to specification. Further, it is for self-instruction, and not necessarily for classroom instruction.

Finally, pursuant to Headnote 1, Part 4, Schedule 8, TSUS, such articles cannot be entered under item 851.15, TSUS, when imported for general commercial sale. Rather, they must be ordered by and entered for a particular institution.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

11 JUN 1986

Siegel, Mandel & Davidson, P.C.
655 15th Street, N.W.
Suite 300
Washington, D.C. 20005

Gentlemen:

This is in response to your ruling request of February 18, 1986, concerning the tariff classification of a man's boxer-style garment, made on behalf of your client, Sigallo, Ltd.

The sample submitted has a woven shell of 60 percent cotton and 40 percent polyester. It has a nylon-knit support liner, a front fly opening with a zipper closure, an elasticized waistband with a snap closure, a drawstring at the waist, two side seam pockets, and one left rear pocket insert with a zipper closure.

You claim classification of this article is appropriate under item 381.6585, Tariff Schedules of the United States Annotated (TSUSA), subject to quota category 359. You have been advised that the article must be classified under item 381.6210, TSUSA, subject to quota category 347.

Ruling 073387, February 17, 1984 (copy enclosed), addresses the issue presented by your case and states principles to be followed in this case. The resolution of whether the subject garments are shorts and therefore classifiable in item 381.6210, TSUS, with a textile and apparel category of 347, or whether the garments are swimwear, classifiable in item 381.6585, TSUS, with a textile and apparel category designation of 359, is the issue under consideration.

Criteria previously stated by the Customs Service for making the distinction between swimwear and shorts are discussed in Ruling 073387. Features such as heavier fabrics, pockets, cotton liners, and fly fronts are pointed out as being characteristic of multipurpose shorts and not swimwear. Ruling 073387 also states that although the fabric of the garment in question may be determinative by itself, none of the other criteria will be the sole determining factor of whether an article is classifiable as shorts or swimwear. The article of apparel should be considered as a whole, using the stated criteria for assistance in making the determination.

B3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In applying the principles set out in Ruling 073387 to the instant case, we find that the sample submitted is classifiable as multipurpose shorts. This classification is appropriate when considering the overall design of the shorts, especially the fly front opening with zipper closure and the three pockets.

The sample garment which is the subject of your ruling request is properly classifiable under the provision for other men's or boys' cotton shorts, not ornamented and not knit, in item 381.6210, TSUSA, with a textile and apparel category designation of 347, dutiable at 16.5 percent ad valorem.

Sincerely,

John T. Wirth

District Director of Customs
100 Summer Street
Boston, Massachusetts 02110

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 0401-4-001039

This protest was filed against your decision in the liquidation on September 28, 1984, of Boston entry No. 296525, dated May 3, 1984, covering electrostatic copying paper produced in Belgium.

This ruling concerns the correct tariff classification of the electrostatic copying paper.

FACTS:

The merchandise at issue is electrostatic copying paper in rolls. The base paper is conductivized bleached kraft paper consisting of pulp, filler, sizing, and other chemicals slurried, beaten, and formed on a paper machine. The base paper is aqueous coated on both sides to impregnate the conductivizing agent to increase electrical conductivity and to improve solvent holdout. The base paper is then coated with a photo-conductive zinc oxide pigment, calcium carbonate filler pigment, electrographic binder resins, plasticizing resins and sensitivity dyes. This paper accepts and records a black and white photographic image on its surface from a coated paper copying machine. Its surface accepts ballpoint pen ink. A sample of the paper was submitted along with the protest.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

BS

Counsel for the protestant claims that the electrostatic copying paper should be classified under the provision for papers, impregnated, coated, surface colored, embossed, ruled, lined, printed, decorated or any combination thereof, other, not specifically provided for, not lithographically printed, impregnated, coated or both, other, in item 254.80, Tariff Schedules of the United States (TSUS).

The Boston import specialist liquidated the entry under the provision for coated writing paper weighing over 18 pounds per ream, not lithographically printed, in item 254.56, TSUS.

ISSUE:

Is the electrostatic copying paper classifiable as writing paper in item 254.56, TSUS, or as other paper in item 254.80, TSUS?

LAW AND ANALYSIS:

Counsel for the protestant argues that electrostatic copying paper is not writing paper. He argues that electrostatic copying paper accepts a black and white photographic image on its surface and does not accept ballpoint pen ink. He claims that electrostatic copying paper has a different manufacturing process, different properties and qualities and different end use applications than writing paper. He points to Treasury Decision 56320(53), Treasury Decision 66-99(31), and New York letter 804344, dated November 15, 1982, as instances in which electrostatic copying paper was classified

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077833

B6

as other paper in item 254.80, TSUS. He asserts that electrostatic copying paper is not used as writing paper because it is chiefly used in electrostatic copiers.

Previous administrative rulings have been neither uniform nor consistent. In the three letters cited by counsel for the protestant, electrostatic copying papers were classified as other papers, not specially provided for, in item 254.80, TSUS. However, in Customs Headquarters Ruling Letter (HRL) 011168 of 1971, HRL 014036 of 1972, and HRL 035826 of 1974, electrostatic and other duplicating papers were held to be writing papers.

The May 1984 Supplement to the Dictionary of Paper specifically describes electrostatic copying paper as a writing paper, but counsel for the protestant argues that the May 1984 Supplement to the Dictionary of Paper does not cover the protestant's paper because that paper is coated with zinc oxide, while the Supplement refers only to uncoated paper. He also argues that there are two types of electrostatic copying, the xerographic or plain paper copier and the zinc oxide or coated paper copier. He claims that only plain bond photocopying paper falls within the American Paper Institute's definition of writing paper.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077833

B7

Counsel cites two experts in the paper field who say that coated electrostatic copying paper is not writing paper. The second expert admits that the Dictionary of Paper definition of writing paper is general enough to cover copying paper, but he says it is his opinion that the paper industry would not consider coated copying paper to be writing paper.

Finally, counsel cites the Summaries of Trade and Tariff Information, 1968 and 1969 editions, in support of his claim that coated electrostatic copying paper is not writing paper but other coated paper classifiable in item 254.80, TSUS. He admits, however, that coated copying paper is used almost exclusively on copying machines.

Despite counsel's claim, tests in Customs Headquarters indicate that the instant paper can readily be written on by ballpoint pens.

Headnote 2(d), Part 4, Schedule 2, TSUS, defines writing paper as follows:

> the term "writing paper" includes, but is not limited to, papers such as ledger, letter, manifold, mimeograph, note, onionskin, tablet, and typewriter papers.

The American Paper Institute, in its May 1984 Supplement to the Dictionary of Paper, Fourth Edition (1980), stated that "...there is now a need for additional definitional material describing writing papers and printing papers." Page 1 of that Supplement, in the "Description of Uncoated Writing and

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077833

Related Papers" portion, states that "Writing papers consist of a wide variety of papers suitable for pen and ink writing or for use with the typewriter, automatic accounting equipment, copiers, computers, etc." It says that "They are usually used by an individual, within a company for correspondence, copying, computer output or on a direct basis -- conducting business transactions." The Supplement specifically notes that "End use products include, but are not limited to, writings, letters, notes, mimeographing, spirit duplicating, electrostatic copying...." Recent correspondence with the API confirms that these statements apply to coated electrostatic copying paper as well as uncoated copying paper.

The instant paper, contrary to counsel's claim, readily accepts writing by a ballpoint pen. The May 1984 Supplement to the Dictionary of Paper confirms that copying paper is regarded as a writing paper within the trade. Based on these factors, New York letter 804344 is hereby revoked. See HRL 077093 for the official revocation notice. We find that electrostatic copying paper is a writing paper and that the instant paper is properly classified as such in item 254.56, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

077833

B9

HOLDING:

The instant electrostatic copying paper is classified as writing paper in item 254.56, TSUS. The protest should be denied in full. A copy of this decision letter should be sent to the protestant along with the CF 19 Notice of Action.

Sincerely,

Harvey B. Fox

NOV 13 1986

REFER TO

CLA-2 CO:R:CV:G
077862 JLV

Mr. Errol L. G. Powell
Industrial Commercial Developments Limited
7 - 9 Harbour Street
Kingston, Jamaica

Dear Mr. Powell:

In your letter of February 24, 1986, you requested a ruling on whether galvanizing of steel sheets was a substantial transformation for purposes of determining whether the galvanized product was a product of Jamaica and eligible for tariff preferences under the Caribbean Basin Initiative (CBI).

Enclosed is our ruling of July 25, 1986 (file 076342), concerning the galvanizing of steel sheet, in coil form. In this ruling we held that hot dip galvanizing was not a substantial transformation. This ruling applies to the merchandise described by you.

You propose to galvanize and corrugate steel sheet by either a sheet-by-sheet process or a continuous process. In the sheet-by-sheet process, cold rolled coiled steel is cut to length and then pickled, washed, galvanized, washed, and chromated in a hot dip galvanizing process. The flat sheets are then passed through roll-formers to give the desired corrugation profile in order to improve rigidity and to enhance the aesthetics when the product is used as a roofing and cladding material.

In the continuous process, the cold rolled coiled steel is galvanized in the same manner as the individual sheets, and, depending on user requirements, either cut to length and corrugated or re-coiled and shipped in coil form.

The galvanizing process is not a substantial transformation. Furthermore, the additional process of corrugating does not make the article a new and different article having a new name, character, or use. Steel sheets, corrugated or not, remain as steel sheets in their essential character.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B11

Therefore, the country of origin of the galvanized and corrugated sheets of steel is the country in which the cold rolled steel sheet, in coil form, was originally produced.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Steven W. Baker, Esq.
Law Offices of
Bellsey and Baker
100 California Street
Suite 670
San Francisco, California 94111

Dear Mr. Baker:

In a letter dated February 24, 1986, on behalf of Avocet, Inc. a manufacturer and wholesaler of bicycle parts, you requested pursuant to 19 U.S.C. 1516 and Part 175, Customs Regulations, information as to the tariff classification of an electronic bicycle speedometer device exported by Tsuyama Manufacturing Co., Ltd. of Japan, and known as the Cateye Solar Model CC 2000 cyclo-computer.

In a ruling dated October 17, 1983 (our file No. 071022), this office held that a Cateye-Velo CC-1000 cyclocomputer which is a microcomputer-based-instrument designed to provide cycling information on trip distance, elapsed time and speed is classifiable as a bicycle speedometer under item 711.93, Tariff Schedules of the United States (TSUS).

The rationale expressed in this ruling was that merchandise is classifiable on the basis of its primary design and construction even though it is capable of performing other auxiliary or incidental operations. In this case we found that the primary purpose of the cyclocomputer was to function as a speedometer.

The instant Cateye 2000 measures 2-15/16 inches by 2-7/8 inches by 1-1/8 inches and weighs 2.29 ounces without batteries. This unit is powered by solar cells and two rechargeable silver-oxide cells. In addition to the main unit, this model includes a magnetic sensor ring to be mounted on the front fork with an attached cord to be plugged into the main unit, a magnet to be mounted on the crank arm, and a magnetic cadence sensor to be mounted on the frame with a cord to connect it to the main unit.

The Cateye 2000 has a liquid crystal display (LCD) which provides a digital readout of the following functions:

1. correct speed in mph or km/h;

2. odometer measuring the total distance since installation;

3. trip distance measured from the last reset of the meter;

4. time elapsed since the last reset of the meter;

5. average speed in mph (or km/h) from the last reset of the meter;

B13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

6. maximum speed attained since the last reset of the meter;

7. cadence, i.e. the instantaneous pedal rotation per minute (range 15-30 rpm);

8. clock, i.e. time-of-day;

9. alarm, settable every 1 minute for time; every .1 mile (or km) for distance; or every .1 mph (km/h) for speed (to sound if the set speed is exceeded).

It is to be noted that the Cateye 2000 adds to the speed, distance and time functions of the Cateye 1000, a cadence function. The cadence function produces a count of revolutions of the pedals per minute and is a pacing device for the rider.

Our New York office has issued a ruling (file No. 816966) dated March 11, 1986, to the Japanese manufacturer holding that the Cateye 2000 is classifiable under item 711.98, TSUS, as other revolution counters, production counters, taximeters, odometers, pedometers and counters similar to the foregoing articles. The rationale for this classification was that inasmuch as the cadence function is a second significant function to the speed function, the Cateye 2000 is more than a bicycle speedometer. We do not agree with this result and an elaboration of our viewpoint on this matter is set out below.

Where an article is in character or function something other than as described by a separate statutory provision -- either more limited or more diversified -- and the difference is significant, it cannot find classification within such provision. It is said to be more than the article described in the statute. Robert Bosch Corp. v. United States, 63 Cust. Ct. 96, 103, C.D. 3881 (1969). Merchandise, however, is classifiable on the basis of its primary design and construction, even though it is capable of performing other auxiliary or incidental operations. Durst Industries, Inc. v. United States, 73 Cust. Ct. 160, C.D. 4568 (1974). In order to determine if an article is more than that provided for in a particular tariff provision, it is necessary to ascertain the common meaning of the provision and compare it with the merchandise in issue. E. Green & Son (New York), Inc. v. United States, 59 CCPA 31, C.A.D. 1032 (1971).

The information you have provided persuades us that the Cateye 2000 is designed, manufactured, advertised, sold and used as a speedometer. The additional functions such as solar power, cadence and time dispay may add to the versatility of the unit and may provide selling points to differentiate a particular unit from other speedometers. The unit is purchased in place of a mechanical speedometer, but the primary reason for purchase is

B14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

077865

for the speedometer function. It should be noted that the Cateye 2000 has "speed" as the only permanently displayed function. Any other function must be selected by a mode button on the cateye.

Additional functions, such as cadence, may be important to some individual users, but these functions are not significant enough to support the development of commercial bicycle devices which do not incorporate speed functions.

In conclusion, we do not regard the cadence function as a second significant function which is co-equal with the speed function. It is in our view incidental or subordinate to the speed function. For this reason it is now our position that the Cateye 2000 is properly classifiable under the provision for bicycle speedometers in item 711.93, TSUS, and dutiable at the rate of 18.3 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. D.S. Rana
Commerce Attache
Embassy of India
2536 Massachusetts Ave., N.W.
Washington, D.C. 20008

Dear Mr. Rana:

This is in response to your letter of February 19, 1986, to William Marchi, regarding the proper classification and textile category numbers of merchandise described by the importer as ladies cotton knit night dresses and cotton swimsuits. Upon viewing the samples submitted, the merchandise may be described as follows. The first sample is a cotton ladies' knit short sleeve, pullover shirt with a round, capped neckline and hemmed bottom with long side slits. The shirt has no ornamenting features. It is worn over underwear and the bottom of the shirt is worn on the outside of either a skirt or pants. The second sample submitted is a sleeveless cotton ladies' knit playsuit with short leg coverage. It has a deep V-neck and would require another top such as a blouse or tank top to be worn under it in order to provide decent coverage of the wearer. The playsuit also features functional drawstrings across the neck and at the shoulders. It is intended to be worn as outerwear.

The first sample garment may be appropriately included in the class or kind of merchandise worn as an outerwear "big shirt." Therefore it is properly classifiable under the provision for other women's wearing apparel, not ornamented, of cotton, knit, shirts, other, in item 384.29, Tariff Schedules of the United States (TSUS), with a textile category of 339.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

C2

The second sample is a playsuit and falls within the general category of merchandise known as outerwear. The construction and design of the garment indicate that it is not to be worn under another garment and therefore does not fall within the general class of merchandise known as underwear. Due to the lightweight nature of the cotton fabric of which the playsuit is made, classification of the garment as a swimsuit is inappropriate. The playsuit is properly classifiable under the provision for other women's wearing apparel, not ornamented, of cotton, knit, playsuits, other, in item 384.34, TSUS, with a textile category of 337.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

1986

Mr. D. S. Rana
Commerce Attache
Embassy of India
2536 Massachusetts Ave., N.W.
Washington, D.C. 20008

Dear Mr. Rana:

This is in response to your letter of February 19, 1986, regarding the proper classification and textile category number of ladies' vests made of woven cotton fabric. The sample you submitted features a full front opening secured by seven buttons, pointed collar, elasticized waist and two front patch pockets secured by velcro flaps.

Upon importation, the garments were classified as sleeveless blouses and visas were required for textile category 341. The importer believes that proper classification of the articles is as vests requiring visas under textile category 359.

Ruling 074584, December 13, 1984, illustrates the idea that a vest is normally worn over another garment. It is generally a shorter garment, reaching to the waist, without sleeves and with buttoning down the front. See T.D. 78-205. Determining the classification of each article of apparel will be made on an individual basis balancing factors such as the cut, overall appearance, style and weight. See Ruling 039454, May 9, 1975.

We find the garments to be designed for wear over other outerwear and lacking appropriate coverage for wear without a blouse or shirt. Specifically, the armholes are cut very wide to accomodate a garment worn underneath in comfort.

Therefore, the sample garment is properly classifiable under the provision for vests in item 384.0652, Tariff Schedules of the United States. The appropriate textile category number is 359.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON, D.C. 20229

077905

REFER TO

25 JUL 1986 CLA-2:CO:R:CV:G
077905 PR

This ruling concerns the tariff status of a certain rainsuit.

ISSUE:

The issue presented by the subject inquiry is whether the two garments comprising the "rainsuit" are properly classifiable under the provision for garments designed for rainwear, hunting, fishing, or similar uses, wholly or almost wholly of fabrics that have been coated or filled, or laminated, with rubber or plastics material, in item 376.56, Tariff Schedules of the United States (TSUS), even though those garments are reversible and may be worn with exterior outershells that have not been coated or filled, or laminated, with rubber or plastics material.

FACTS:

The subject merchandise is a two-piece set which consists of a pair of trousers and a jacket. Both are constructed in the same manner and may be worn with either side out. Both garments consist of a knit white man-made fiber fabric that has been laminated on its inner surface with a layer of plastics material, and a red woven man-made fiber fabric that is not coated or laminated. It is stated that the plastics lamination makes the garments both windproof and waterproof,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C6

thereby allowing the garments to be worn as a rainsuit and while a person is participating in outdoor sports activities during inclement weather.

The trousers have an elasticized waistband with a drawstring, piping down the side seams, and pocket-like openings secured with fabric fasteners that allow the wearer access to pockets of garments worn underneath the trousers. The bottoms of both trouser legs have adjustment tabs which are secured with metal snap fasteners. The jacket has a full front zipper opening that is usable from either side, a squared off collar with a fabric closure, fabric closures on the long sleeve cuffs, an elasticized waistband, and side pockets on either side of the front opening that are accessible from either side of the jacket. On the white side of the garment there is red piping that extends around the raglan sleeve seams.

LAW AND ANALYSIS:

In order to be classifiable in item 376.56, it must be determined that the garments in question are "wholly or almost wholly" of fabrics which are laminated with rubber or plastics material. Since both garments consist of two layers of fabric, one of which does not have any rubber or plastics material applied to it, the garments cannot be considered "wholly of" fabrics which are laminated with rubber or plastics material. Therefore, to be classifiable in that tariff provision, the garments must be "almost wholly of" such fabrics.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

077905

General Headnote 9(f)(iii), TSUS, defines the term "almost wholly of" as meaning that the essential character of the article is imparted by the named material, notwithstanding the fact that significant quantities of some other material or materials may be present.

While we have not tested the laminated fabric portion of the submitted samples, advertising literature and our own visual inspection of the merchandise indicates that the laminated plastics layer on the white knit fabric does provide, if not complete waterproof protection, then at least substantial and significant water repellent or water resistant properties.

Considering the fact that the garments are apparently sold as a rainsuit or a foul weather suit to be worn during sports activities, the waterproof, windproof, and heat retention properties of the laminated white knitted fabric do, in fact, provide the essential character to the garments in question.

A question has been raised concerning the appropriateness of classifying these garments as rainwear or similar garments when one of the fabrics which may be worn exposed to the elements is not coated, filled, or laminated with rubber or plastics material. In this instance, it makes no difference whether the wearer has the coated or the uncoated outershell exposed, the protection afforded to the wearer against moisture and wind is still present. Note that we take no position at this time on the classification of other

017905

C8

reversible garments that may be padded or quilted and have only one exterior shell which protects against moisture or rain.

HOLDING:

Each of the two garments comprising the sample set are classifiable in item 376.56, TSUS.

Sincerely,

John T. Lech

Ms. Janice E. Toohey, Esquire
Givens, Kelly and Shaw
9225 Katy Freeway, Suite 309
Houston, Texas 77024

Dear Ms. Toohey:

You requested a tariff classification for Texsport "flight suit coveralls" on behalf of your client Texsport. You submitted a sample along with your letter.

The sample submitted is a pair of unixsex coveralls composed of 65 percent polyester and 35 percent cotton. On each shoulder there is a textile overlay. The coveralls are in chief value of polyester. They were made in China. They are available in five sizes, ranging from extra small to extra large.

The issue is whether the textile overlays on the shoulders ornament the coveralls. You argue that the overlays are not ornamentation because they impart no more than an incidental, decorative effect and because they have a function when used as flight suits. You cite United States v. Endicott Johnson, 67 CCPA 47, C.A.D. 1242 (1980), Brittania Sportswear v. United States, Slip Op. 83-46, 5 C.I.T. 212 (1983), and Ferriswheel v. United States, 68 CCPA 21, C.A.D.1260 (1981). You also submit three affidavits from former military personnel stating that the shoulder overlays are designed to reinforce and protect the shoulder from wear (e.g., from parachute straps or harness straps).

While the shoulder overlays may have some function among flight personnel, these overalls are for the general public, not flight personnel. The overlays simulate an allegedly necessary feature of a flight suit, but they are unnecessary on the instant garment. The overlays are more than incidentally decorative, therefore they constitute ornamentation. See Blairmoor Knitwear Corp. v. United States, 60 Cust. Ct. 338, C.D. 3396 (1968), where the court held that a feature which is more decorative than functional ornaments a garment for tariff purposes.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C10

The coveralls are unisex because they may be worn by both men and women and are available in a range of sizes fitting both men and women. As such, they fit within the Schedule 3, Part 6, Headnote 2(c), Tariff Schedules of the United States (TSUS), definition of "women's and girls' wearing apparel" as "wearing apparel commonly worn by either sex and not identifiable as being intended exclusively for the wear of men or boys."

The unisex, ornamented coveralls are classified under the provision for other women's wearing apparel, ornamented, of man-made fibers, not knit, coveralls, overalls, jumpsuits and similar apparel, in item 384.2530, TSUS, dutiable at the 1986 rate of 28.3 percent ad valorem. The textile category for items classified in item 384.2530, TSUS, is 659.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Terminal Island
San Pedro, California 90731

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 27044003313

The above-captioned protest and application for further review were filed against your tariff classification of toy figures which were the subject of entry No. 84-751044-2 filed at the port of Los Angeles in 1983. This merchandise is a product of Taiwan. Our decision follows:

ISSUE:

The merchandise was classified by Customs Officers under the provision for dolls in item 737.24, Tariff Schedules of the United States (TSUS). This item is not on the Generalized System of Preferences (GSP) list for eligibility for an exemption from duty, and the applicable column 1 rate of duty in 1983 was 14.8 percent ad valorem. It is contended the merchandise is eligible under a GSP exemption for toy figures of animate objects (except dolls) in item 737.40, TSUS. The main issue for resolving this classification competition is whether the article in question possesses human features and, therefore, constitutes a doll, or whether it is merely humanoid and, therefore, constitutes an animate object other than a doll.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C12

077941

FACTS:

The specific toy in question is an action figure approximately 5-1/2 inches in length. It is designated "Stratos, Winged Warrior," and is part of Mattel's Masters of the Universe series of action figures. The wings exist as separate attachments to the wrists.

LAW AND ANALYSIS:

Our position concerning the classification of so-called action figures as dolls was set forth at length in our decision in C.S.D. 84-32, 18 Cust. Bull. 896 (1983). That decision was responsive to arguments similar to those now being made here that the merchandise cannot be classified as dolls because of considerations pertinent to commercial designation, and it is unnecessary to repeat our position as to those points.

In our decision in C.S.D. 81-236, 15 Cust. Bull. 1202 (1981), we also affirmed our position that toys which depicted extraterrestrial creatures and which were merely humanoid rather than human were not classifiable as dolls, but rather as toy figures of animate objects. The characteristics of the figures which made them humanoid and other than human were distortions, exaggerations, etc., short of hybridizations which had no analogies to actual living or known species. Against the background of the language of Headnote 3, Subpart E, Part 5, Schedule 7, TSUS, it now may be said that an article is classifiable as a toy figure of an animate object if it is less than predominantly nonearthly, but not sufficiently human to constitute a doll.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C13

147970

017941

While it is claimed in the protest that Stratos combines "animate" features with human features, and therefore, cannot be regarded as a doll, he lacks any definite hybridizations. If Stratos is to be regarded as merely humanoid rather than human, that characterization must rely on certain distortions of otherwise human features. The main distortions embodied in the figure are arms which are excessively long and exaggerated lips. However, these distortions and exaggerations do not result in a figure sufficiently grotesque or otherwise unwordly to necessarily suggest extraterrestrial origin.

While it is further claimed that eye treatment and head ridges further set Stratos apart from usual human depiction, we find that these features should rather be interpeted as a type of helmet with built-in goggles.

HOLDING:

For the foregoing reasons, we find that Stratos is properly classifiable as a doll under item 737.24, TSUS. Therefore, the protest should be denied in full and a copy of this decision attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P Schaffner

Bonar Packaging Ltd.
5615 - 44th Street, S.E.
Calgary, Alberta, Canada T2C 2J1

Dear Ms. Brown:

In New York letter 816770, dated January 21, 1986, we advised you that a repulpable linerboard/wax/linerboard would be classified as test or container board in item 251.30, Tariff Schedules of the United States (TSUS). Now you have advised us that the instant merchandise is used as a roll wrap, e.g., for wrapping rolls of newsprint.

In Customs Headquarters Ruling Letter 005399, dated September 21, 1970, we held that a similar wrapping paper made by passing two webs of kraft paper through the paper machine and joining them together with wax between the two webs, was classified, if under 0.012 inch in thickness, as wrapping paper, in item 252.81, TSUS.

Following HRL 005399, we hereby find that the instant linerboard/wax/linerboard, used as a roll wrap, is classified in item 252.81, TSUS, dutiable at the 1986 Column 1 rate of 0.5 percent ad valorem. New York letter 816770 is modified accordingly.

Sincerely,

Arthur J. Shapiro

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3001-5-000336

This protest was filed against your decision in the liquidation on June 28, 1985, of entry No. 85-564463-7 dated April 12, 1985, covering a shipment of textile ice cream cones produced in Taiwan.

This ruling concerns whether a textile "cherry" sewn to the top of a textile ice cream cone constitutes ornamentation.

FACTS:

The merchandise at issue is a three dimensional stuffed textile item made to resemble an ice cream cone with a cherry on top. The protestant claims that the article is ornamented by the textile cherry on the top. The import specialist claims that the cherry is an integral part of the cone and that the article is not ornamented. The merchandise was liquidated under the provision for articles not specially provided for, of textile materials, other articles, not ornamented, of man-made fibers, pile or tufted construction, in item 389.50, Tariff Schedules of the United States (TSUS).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D2

ISSUE:

Does a textile cherry sewn to the top of a textile ice cream cone constitute ornamentation?

LAW AND ANALYSIS:

The protestant's broker claims that the textile cherry decorates and ornaments the textile ice cream cone. He claims that the item is classified under the provision for articles not specially provided for, of textile materials, other articles, ornamented, other, in item 386.13, TSUS.

The import specialist asserts that the ice cream cone is not ornamented because the cherry is an integral part of the cone. The merchandise was liquidated as an unornamented textile article in item 389.50, TSUS.

The item is meant to imitate a complete edible article (i.e., an ice cream cone with fruit topping). Ice cream cones have various toppings (e.g., chocolate bits, fruit, nuts, etc.). These items are part of the dessert, not merely decoration.

Customs Headquarters has held previously that features which are necessary to create the article do not constitute ornamentation for tariff purposes. See Customs Headquarters Ruling Letter (HRL) 073813, dated January 7, 1985, Protest Review Decision 75-15 dated May 27, 1975, ORR Letter 72-0263, CIE Letter 6871/66 and Treasury Decision 56241(8). The cherry is necessary to create or complete the article. It does not constitute ornamentation.

The ice cream cone with a cherry is unornamented. It is classified as an unornamented textile article in item 389.50, TSUS.

077997

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D3

HOLDING:

The ice cream cone with a cherry is unornamented and is classified in item 389.50, TSUS. The protest should be denied in full. A copy of this letter should be sent to the protestant along with the CF19 Notice of Action.

Sincerely,

Harvey B. Fox

Philip S. Gallas, Esq.
Grunfeld, Desiderio, Lebowitz & Silverman
2000 L Street, N.W., Suite 518
Washington, D.C. 20036

Dear Mr. Gallas:

In your letter of March 17, 1986, you requested a tariff classification ruling for a blouse on behalf of your client Mast Industries Inc. You submitted a sample blouse along with your letter.

The sample submitted is a ladies' shirt manufactured from a 100 percent cotton fabric. No style number is indicated. The shirt features a full front opening with placket secured by six buttons, 3/4 length sleeves with rolled up cuffs, pointed collar, rounded tailed bottom slightly longer in the rear, and two breast pockets with unsecured flaps.

A rectangular textile label measuring 1-1/8 inches wide and 1/2 inch high with the words "VENEZIA SPORTSWEAR" in plain block letters appears on the lower corner of one pocket flap. The letters in "VENEZIA" measure 3/16 of an inch wide and high, while those in "SPORTSWEAR" measure 1/8 of an inch high and wide. The words appear on separate horizontal planes. The letters in "SPORTSWEAR" are arranged close together, while those in "VENEZIA" are farther apart, so that both words extend the width of the label.

The issue here is whether this label constitutes ornamentation or not. We find that the label, which contains plain block letters, does not constitute ornamentation.

Sincerely,

John Rach

Mr. Salvatore E. Caramagno, Esq.
Ross & Hardies
1090 Vermont Avenue, N.W.
Washington, D.C. 20005

Dear Mr. Caramagno:

You request a reconsideration of the tariff classification of certain strippable wall paper base stocks exported to the United States by your client, J. Ford and Co. Ltd. of Canada. The three types of base stocks at issue are sold under the trademark "Permastrip." They are Mark I, Mark II, and Permastrip L.

In a letter dated July 4, 1985, Mr. Luc M. Guay, Vice President in charge of Research and Specialty Marketing for J. Ford and Co. Ltd., states that Mark I is made on a Rotoformer. He states that Mark I is made of a combination of cellulosic and polyester fibers. Mark I S has polyester fibers which are 1/4 inch in length, while Mark I M has polyester fibers which are 1/2 inch in length. In the same letter, Mr. Guay states that the cost per pound of the polyester fibers in Mark I S is substantially higher than the cost per pound of the cellulosic fibers. (This agrees with what Mr. Guay said at a conference at Customs Headquarters in the summer of 1985, when he stated that the polyester is the component of chief value of Mark I).

In the same letter, Mr. Guay states that Mark II is made of 100 percent cellulosic fibers and is impregnated for dry strippability. He also says that Permastrip L is virtually the same as Mark I, except that it is composed of cellulosic fiber and mechanical pulp. At the conference in the summer of 1985, Mr. Guay stated that the Mark I and Permastrip L base stocks are made on Fourdrinier (i.e., standard) paper making machines.

In two previous ruling letters (Customs Headquarters Ruling Letter (HRL) 061169 of September 7, 1980 and HRL 070949 of September 13, 1983), Customs found that Mark I and Mark II Permastrip were classified under the provision for other printing paper, not lithographically printed, impregnated, coated or both, but not otherwise treated, in item 254.46, Tariff Schedules of the United States (TSUS).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D6

You argue that none of the three Permastrip base stocks are printing papers because:

(1) They do not belong to a class or kind of paper commonly or commercially known as printing paper,

(2) They do not belong to a class or kind of paper chiefly used in the United States as printing paper,

(3) They are not suitable for use as printing paper, and

(4) They are not unfinished printing papers.

You submit two affidavits, one from Mr. Guay and one from Mr. Stephen Bodrogi of Imperial Manufacturing Company, in support of the above-mentioned contentions. You argue that the three Permastrip base stocks should be classified under the provision for papers, impregnated, coated or both, not gummed, in item 254.80, TSUS.

After reconsideration of the previous rulings, we agree with you that none of the Permastrip base stocks constitute printing paper. If both Mark II and Permastrip L are impregnated or coated at the time of importation, we find that they are classified under the provision for other coated or impregnated papers in item 254.80, TSUS, dutiable at the 1986 Column 1 rate of 0.4 percent ad valorem.

The Permastrip Mark I base stock is a different matter, however. We note that it is made on a Rotoformer, that its component of chief value is polyester, and that it contains polyester fibers 6 millimeters or longer in length which have not been digested in the manufacturing process.

Customs HRL 061187 dated June 19, 1979, and HRL 065193 dated February 17, 1981 concern a similar material. They stated that "the length of the fibers is one way of distinguishing nonwovens from paper. Fibers used in nonwoven technology are generally 6 to 12 millimeters in length, while papermaking fibers are between 1 and 4 millimeters." They concluded that "This material with textile fibers in excess of 4 millimeters in length which are not digested in the manufacturing process is not paper" and that the material was classified as a nonwoven textile material. These letters also established that the Rotoformer was not a standard papermaking machine. See HRL 073555 dated May 29, 1984, in which a

D7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

071972

material which was partly polyester fibers was classified as a nonwoven textile fabric in item 355.25, TSUS. See also HRL 076899, dated February 24, 1986, in which a product used as a substrate or backing for vinyl wall covering materials and composed of 65 percent cellulosic wood pulp fibers and 35 percent man-made textile fibers was classified as a nonwoven fabric in item 355.25 TSUS.

Following HRL 061187, HRL 065193, HRL 073555 and HRL 076899, we find that Mark I is not classifiable as paper of any kind because it is produced on a Rotoformer and contains polyester fibers 6 millimeters in length or longer which have not been digested in the manufacturing process. Mark I is classified as a nonwoven textile fabric of man-made fibers in item 355.25, TSUS, dutiable at the Column 1 rate of 12.9 percent ad valorem plus 2 cents per pound.

Sincerely,

Allen R. Schaffer

Seattle, Washington 98174

Dear Sir:

Re: Application for Further Review of Protest No. 30015-000231, dated May 30, 1985.

This protest concerns the classification of nickel-cadmium (rechargeable) batteries contained within imported vacuum cleaners. The batteries are soldered in place and are neither replaceable nor removeable. Plastic brackets are available for hanging the vacuum cleaner on the wall while recharging. The protestant claims that the batteries and brackets are an integral part of the vacuum cleaner and should be classified as an entirety in item A683.30, Tariff Schedules of the United States (TSUS), under the provision for vacuum cleaners.

The issue under consideration is whether the vacuum cleaner, rechargeable batteries and plastic brackets are classified as an entirety in item 683.30, TSUS, under the provision for vacuum cleaners. Ruling 074443, December 7, 1984, which is controlling for disposition of this issue, held that the battery pack used in a cordless telephone is separately classifiable. In this ruling, the principle is stated that the batteries, although soldered to and imported with an object, retain their identity as batteries. See United Merchandising Corp. v. United States, 48 Cust. Ct. 50, C.D. 2313 (1962). In the instant case, the batteries may be replaced even though soldered in place.

Also, note that as discussed in the case of James Betesh v. United States, 40 Cust. Ct. 186, C.D. 1981 (1958), batteries when combined with the vacuum cleaner do not create a new article of commerce. The batteries alone have a separate commercial identity.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D9

077984

079684

HOLDING:

The batteries are separately classifiable under the provision for other storage batteries and parts thereof, in item 683.15, TSUS. The vacuum cleaner is properly classifiable in item A683.30, TSUS, under the provision for vacuum cleaners. The plastic brackets are considered holders and not parts of the vacuum cleaner and thus are separately classifiable in item 772.15, TSUS.

You are instructed to deny the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

for Harvey B. Fox
Director, Classification
and Value Division

077985 JLF

077985

District Director of Customs
2039 Federal Office Building
909 First Avenue
Seattle, Washington 98174

Dear Sir:

Re: Request for Further Review of Protest No. 30015-000305, dated July 5, 1985.

This protest concerns the tariff classification of mobile shapes identified as "Pancake Rag" animal dolls. The articles were classified upon importation in item 389.62, Tariff Schedules of the United States (TSUS), under the provision for other articles, not specially provided for, of textile materials. The protestant claims that the merchandise is properly classifiable in either item 737.28 or 737.40, TSUS, under the provisions for toy figures of animate objects.

According to Headnote 2, Subpart E, Part 5, Schedule 7, TSUS, if an article is chiefly used for the amusement of children or adults, it is a toy and should be classified in Schedule 7. We find the subject articles to be chiefly used for the purpose of amusement and should be classified in Schedule 7.

However, in this case for an article to be classified as a toy figure of an animate object, the merchandise must be a representation of the animal. See Louis Marx & Co., Inc. v. United States, 66 Cust. Ct. 139, C.D. 4138 (1971). A representation has been interpreted to mean a defined configuration in three-dimensional form. The sample articles appear only to suggest the idea of an animal and are more like shapes defined by a flat area of outline and not to an area defined by contour, mass, volume or fullness. In essence, the samples are silhouettes of particular animals, not multi-dimensional representations. The one-sided coloration and pattern of the mobile shapes emphasizes the insufficient reproduction of the appearance of an animate object.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D11

Ruling letter 064360, May 8, 1980, classified a stick-on animal, having one-sided color and a flat shape in item 737.95, TSUS, as other toys.

The Pancake Rag animals are chiefly used for purposes of amusement and are classified accordingly in Schedule 7. They lack the features, composition and identity that would allow a more specific classification in items 737.28 or 737.40, TSUS, and are therefore properly classifiable under the provision for other toys in item 737.95, TSUS.

You are instructed to deny the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

909 First Avenue
Seattle, Washington 98174

Dear Sir:

Re: Request for Further Review of Protest No. 3001-5-000275, Dated June 21, 1985

This protest concerns the tariff classification of an article known as "Kari-Me Baby" under item 737.24, Tariff Schedules of the United States (TSUS), as a doll. The protestant claims that it should be classified under item 737.95, TSUS, as other toys, a provision carrying duty-free treatment for articles that are products of the Republic of Korea. In addition to filing a memorandum in support of their protest, representatives of the protestant together with counsel made an oral presentation to Customs Headquarters officials on June 11, 1986.

The article in question has a soft-sculpture head with stitching on the front suggesting facial features. A lace-trimmed brushed flannel nightgown is gathered around the neck and has a soft-sculpture hand stitched at the end of each sleeve. A plastic infant toy is sewed to one hand. A bonnet matching the nightgown covers the head. There are no arms or legs and no torso. A lace-trimmed brushed flannel blanket wraps the entire figure; it is stitched across the bottom and about 3 inches up each side and 6 inches up the front. The nightgown is stitched into the seam at the bottom. A 6-inch opening in the back of the blanket and the nightgown permits insertion of a hand. By putting one finger into a tube extending up into the head and the others into each sleeve of the nightgown, one can make the head and hands move.

Counsel for the protestant claims that the article is a puppet and should therefore be classified as other toys rather than as a doll; that it is more than a doll; and that Customs has a uniform and established practice of excluding from classification as dolls figures such as "Kari-Me Baby" that lack legs and bodies, or are not "complete."

There is no question that "Kari-Me Baby" can be manipulated by the insertion of a human hand into the back. A puppet feature does not, however, prevent the classification of an article, that is otherwise a doll, under the eo nomine provision for dolls. Since Congress has created no eo nomine provision for "puppets," such articles must be classsified, according to their several features, under various provisions of the tariff schedules.

D13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The word "puppet" is related to the Middle French poupette (little doll) and the modern French poupee (doll). See Webster's Third New International Dictionary, Unabridged (1965 ed.). The same dictionary defines "puppet" as:

> 1a. a small-scale figure of a human or other living being often constructed with jointed limbs, appropriately painted or costumed, and moved usually on a small stage by a rod or by hand from below or by strings or wires from above.
>
> 2b. DOLL 1a

"Doll" is defined as follows:

> 1a. a small-scale figure of a human being (as of a baby or child) used especially as a child's plaything.
>
> b. PUPPET 1a

We note that the definitions of "doll" and "puppet" cross-reference each other, indicating that the two terms are not mutually exclusive. Puppets do have a broader representational capacity in that they may depict a variety of living beings, while dolls generally represent humans.

It was under the Tariff Act of 1930 that "toys" and "dolls" clearly became separate entities for tariff purposes. "Congress defined toys in the so-called 'toy provision' of paragraph 1513 and eo nomine provided for 'dolls' in the same paragraph." See American Import Co. v. United States 22 Cust. Ct. 51, 53, C.D. 1158 (1949). The Tariff Classification Study Explanatory Materials, Schedule 7, p. 293, states, with regard to the TSUS provision for "dolls, and parts of dolls, including doll clothing," that "[i]tem 737.20 [now items 737.21 through 737.27] covers all dolls . . . ." The tariff provisions for dolls have long been considered to cover many puppets. In fact, in the case of Brechner Bros. v. United States, 58 Cust. Ct. 272, 275, C.D. 2959 (1967), plaintiff argued that a mechanical dressed crawling baby wound up with a key was not a doll, but a toy figure of an animate object, and that quoted definitions of "doll" should result in the provisions of the Tariff Act of 1930 for dolls being limited to puppets. The court, however, rejected this narrow interpretation.

> With reference to the word 'puppet,' [in the definitions of "doll": a toy puppet representing a person...a child's puppet] plaintiff has suggested in its brief that this limits the term doll to those articles that can be manipulated. No authority is cited for this contention....the word 'puppet' is defined as '***A small figure, commonly representing a human being***.' As defendant points out, most dictionary definitions make the word 'puppet' synonymous with the word 'doll.' We know of no sound reason for limiting the meaning of dolls in paragraph 1513 to articles manipulated by hand or strings as one of the meanings of the word 'puppet' suggests.

D14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

047987

Thus, while the provision for dolls is not limited to puppets, it definitely includes them.

In Russ Berrie & Co., Inc. v. United States, 76 Cust. Ct. 218, C.D. 4659 (1976), appeal dismissed, 63 CCPA 125 (1976), the court held that miniature papier-mache figures of small girls were dolls, and not articles of papier-mache. The court noted that it is well established that the provision for dolls is not a use provision but an eo nomine provision covering all forms of dolls and reviewed some of the many court cases in which different types of articles had been held classifiable as dolls. The court also discussed what is meant by the term "doll," at 224-25:

> As we have seen, the common meaning of the word 'doll' encompasses a great variety of merchandise. Perhaps because the variety is so vast, the courts have not been able to render a comprehensive definition of the term 'doll,' nor have they been able to '...make any all-embracing finding as to what is a doll or to hold that all small figures are dolls....' Nonetheless, there does appear to be a certain amount of agreement among the lexicographical authorities.

The court then reviewed definitions of dolls from various sources, including the following:

> More recent lexicographical authorities agree that the word 'doll' encompasses a broad spectrum of articles which are commonly known as dolls. Thus in Webster's New International Dictionary (2d ed., 1953) p. 767, a doll is described as;
>
> doll * * * 2. A child's puppet; esp., a toy baby for a child; any similar figure for play or ornament. * * *

The court thus once again indicated that the definition of dolls includes puppets; the same definitions have been quoted over and over by the court.

Customs has consistently classified dolls with puppet features as dolls. In our ruling of March 27, 1978, file 056326, a 12-1/2 inch dressed figure of a girl that could be manipulated by five strings was so classified:

> Although the marionette is characteristically operated by the manipulation of strings from above, it is still a type of puppet, and in any event, is considered to be a doll for purposes of the tariff schedules. Webster's Third New International Dictionary of the English Language provides generally that a marionette is a 'puppet moved by strings or by hand.' In addition, the Encyclopedia Britannica describes marionettes as string puppets and refers to them as dolls.

E'

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

L86140

In file 800723 of June 11, 1981, a 10-inch figure dressed in a clown-like costume, manipulable by strings attached to its limbs, was also determined to be a doll for tariff purposes. If dolls that can be manipulated were excludable from the doll provisions, it would be a simple matter for importers to attach strings to many dolls, or to make some kind of opening in the clothing or the body of the doll, in order to claim the exclusion. Any doll, in fact, that is also a child's plaything can, by definition, be manipulated during play; that is in the nature of children's dolls. A doll with a long skirt can be manipulated by placing a hand under the skirt and moving the legs. A doll that can be manipulated through a special slot cut in the back can be moved in an even more lifelike manner, but is no less a doll for that.

Counsel for the importer states that "Kari-Me Baby" is more than a doll, but does not give reasons for this position. We assume that it is because of the article's puppet feature. However, we do not find this argument persuasive, since, as indicated above, doll-puppets are classifiable as dolls for tariff purposes, and neither the court nor the Customs Service has held that a puppet feature alone will make a doll more than a doll. The cases and rulings cited in support of counsel's position do not establish that "Kari-Me Baby" is more than a doll. File 057453 of November 2, 1978, concerned the classification of an animal figure, not a human one. The toy monkey classified in that ruling sat on a plastic barrel and had a battery mechanism that caused it to jump and beat the barrel; it was classified as a toy along with other articles that perform tricks, beat cymbals, etc. "Kari-Me Baby" is a human figure; does not have a battery mechanism; and does not perform any tricks. In file 056381, of May 10, 1978, some corn husk dolls were said to be more than dolls; no reason was given. However, we note file 042723 of December 12, 1976, in which two corn husk figures were found to be more than dolls. One was standing on a green floor simulating grass and holding a silver watering can with which she was "watering flowers"; the scene measured 5 inches by 6 inches and had a wooden base and a thin wooden arch roof. The other was similar but lacked a roof. "Kari-Me Baby" is not built into any such scene. In Dan-Dee Imports, Inc. v. United States, --CIT--, Slip Op. 86-2 (January 3, 1986), the court determined that an article was more than a doll because it had aspects of a book, not because it had any aspects of a puppet. In House of Ideas, Inc. v. United States, 2 CIT 68 (1981), an article was held to be more than a doll because its bank component was of equivalent or greater importance to its commercial function than was its human shape. We do not think that the fact that "Kari-Me Baby" can be manipulated by the insertion of a hand is of more commercial importance than the fact that it represents a "soft and cuddly" "real baby" "to hug and pat" "wherever you go" (language from the advertising on the box containing the sample). A bank is quite a different article from a doll; a puppet is not. In Janex Corp. v. United States, 80 Cust. Ct. 146, C.D. 4748 (1978), plastic battery-operated figures of Raggedy Ann and Andy that lit automatically when lifted off a surface or when a ring was pulled were held to be more than dolls because of the lighting feature, not because of any puppet characteristics. The court stated, at 155:

E2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

089490

> ...in the present merchandise the illuminating feature performs a function as a night-light, which is independent of any function or use the articles may have as a doll. And unlike such features commonly incorporated in dolls as mechanisms that create tears, cause the arms or legs to move, produce a voicelike sound, or otherwise contribute to a lifelike simulation, the illuminating feature of the instant articles does not in the least contribute to a lifelike simulation. On the contrary, the illumination feature was solely intended to make the articles useful in the dark as a night-light, a function mutually exclusive of the articles' use as dolls. [Court's emphasis]

We do not think that the puppet feature of "Kari-Me Baby" was intended to serve any function mutually exclusive of the article's use as a doll. Rather, it contributes to the figure's life-likeness, a feature emphasized in the advertising on the box: "Make me move. I'm like a real baby," etc. The court also repeated the definitions of dolls quoted in previous cases. Cragston Corp. v. United States, 51 CCPA 27, C.A.D. 832 (1963) did not concern the doll provisions of the Tariff Act of 1930. Rather, the provisions in dispute were toy figures having a spring mechanism and toy figures or images of animate objects. The court determined that the merchandise there -- a baby doll with an exposed key for winding the enclosed spring mechanism, and a metal walker consisting of two separable halves with each piece mounted on small wheels and used to support the baby in an upright position and make it "walk" -- was more than a figure of an animate object, "since a baby doll in a walker is an entirely different toy than without the walker." "Kari-Me Baby" lacks any added equipment such as the metal walker.

The Customs Service has repeatedly ruled that a variety of articles representing humans but lacking feet, legs, torsos, or various combinations of these "human" body parts are dolls for tariff classification purposes where the clothing is in such proportion that it gives the appearance of a full-figured representation. Thus, a figure consisting primarily of a textile-covered body formed from a hollow cardboard cone and wire was classified as a doll on April 4, 1972, file 018089. A figure with a hollow body made of cardboard and textile material, with no feet, was classified as a doll on May 13, 1970, file 003534. Corn husk dolls, also lacking torso and legs, were similarly classified in T.D. 71-146(6), as were Chinese broom dolls in file 057131 of October 3, 1978. A figure of a baby with a hollow body, laid in a basket and dressed in a woven cotton gown 11 inches in length in the front and 18 inches in length in the back, the back of which was folded over the figure to simulate a blanket, was classified as a doll in file 810815 of October 23, 1984. In each case the figure was determined to be a doll for tariff purposes despite the lack of certain "human" body parts because a full-length skirt or dress clearly suggested the limbs and would have concealed them if they had been present. Further, in IA 128/84, file 075101, of January 30, 1985, a Christmas angel with a textile frock covering a paper cone concealing the absence of legs and torso was determined to be classifiable as a doll:

E3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

> We do not agree that the absence of legs or torso precludes the Christmas Angel from being considered a doll for tariff purposes. This office has ruled consistently that similar figures are dolls for tariff purposes. Further it should be noted with respect to the instant figure that the length of the doll's frock would conceal her legs and torso if she had them.

The file also noted that "the Christmas Angel does contain the shape, feature, and appearance of a doll." It is our position that these rulings are correct and that they indicate that "Kari-Me Baby," too, is properly classified as a doll, since it represents the full-length figure of a baby whose legs and torso, if present, would be swathed in the nightgown and blanket. "Kari-Me Baby" can certainly be described as having "the shape, feature, and appearance of a doll," too. Finally, we note that a letter of April 30, 1981, file 065010/061745, concerning articles imported by the protestant in this case stated that another angel, and a Santa, were classifiable as dolls since they had the required characteristics of "full or essentially full-bodied representations of human characters," despite their lack of feet.

Thus the protestant's claim that Customs has an actual uniform and established practice of not extending classification as dolls to articles that lack legs and bodies is not supported. What Customs has in fact done has been to exclude from the doll provisions partial human figures lacking various body parts or any representation thereof. Thus, in file 811621 of December 13, 1984, a wizard hand puppet not representing a full figure was classified as an other toy, as was another puppet with a human face but less than a full figure in file 805882 of May 16, 1983.

Counsel for the protestant in fact cites a number of other Customs rulings in which puppets were classified as other toys. However, the articles in question in those files could not have been classified as dolls in any case since they represented animals. It is not persuasive in this case that in file 056604 of October 3, 1978, a bunny hand puppet, not a full figure, was classified as an other toy. We note once again that Congress has not seen fit to provide eo nomine for puppets; nor has it done so for toy animals. It has so provided for dolls. The provision for "toy figures of animate objects" specifies "except dolls," and discussion of what constitutes an animate object may not be at all germane to a discussion of what constitutes a doll.

Counsel also refers to file 065423 of January 22, 1981, in which an "incredible hulk" figure was classified as a doll because it was considered a full-bodied representation of a character with human characteristics even if not exactly a human figure. As indicated above, dolls with long skirts or dresses have long been considered full-bodied representations.

Finally, counsel refers to two rulings in which articles described as finger puppets were classified as other toys. In file 064360, of May 8, 1980, the figure was approximately 2 inches tall and consisted mostly of a head with a dog face pasted on; the rest of the article was a band of felt

E4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

078987

large enough to accommodate one finger. The article involved in file 065852 of May 28, 1981, was human in form and designed to fit over the cylindrical top of a lipstick tube or the cylindrical handle on a bottle of nail polish. It could also be used as a finger puppet, again accommodating literally one finger. "Kari-Me Baby" is not remotely similar to these articles, and their classification has no bearing on its classification.

We cannot, then, agree with the protestant's proposed classification or with their claim that in this decision we have made a novel and radical departure from precedent. In importing an article for the first time, the protestant could have taken advantage of the existing procedure for obtaining an administrative ruling. In fact, they have presented a copy of a letter addressed to a National Import Specialist by name, asking for the tariff classification of the article in question here. There is no record that this letter was ever received; it was not logged in, and no acknowledgment, which normally goes out within 30 days, was sent. In the three months between the date of the letter and the date of the first entry, inquiry could have been made and a letter sent to the port indicating that a ruling request was pending. In any case, letters sent personally to National Import Specialists would have to be redirected through proper channels.

In conclusion, we point to the language in Brechner Bros., supra, where the court indicated that new forms of dolls were includable within the doll provision; that language is relevant in this case:

> Moreover, the rosy-cheeked, blue-eyed baby figure, clothed in bright colors and set in a classic crawl position...suggests the essential characteristics of a child's doll....the court can take judicial notice of the fact that technological advances have visited the doll making business to the extent that walking, talking, and crying dolls of all sizes and shapes permeate the modern market place. The extent and degree of imaginative and lifelike features incorporated in these products are sometimes almost incredible. However, it is simply a case of today's children playing with today's dolls, and while the product may change, it is in no way manifest that its use by young, would-be mothers has changed.

For the reasons stated above, "Kari-Me Baby" is properly classified as a doll under item 737.24, TSUS. Therefore, you should deny the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

John T. Rath

U.S. CUSTOMS SERVICE

WASHINGTON, D.C. 20229

SEP - 9 1986

CLA-2:CO:R:CV:G
078034 SM

078034

Mr. Joseph D'Urso
Operations Manager
PKO Limited
434 Chelsea Street
East Boston, MA 02128

Dear Mr. D'Urso:

On behalf of East Wind Company, you have requested an administrative ruling for a proposed customs transaction involving a textile fabric, known as Tyvek, manufactured in the United States by Du Pont. East Wind plans to ship the fabric in rolls 108 inches wide and 3566 meters long to Taiwan, where it will be reworked into rolls of the same width but 59.44 meters long and returned to the United States. You have inquired as to whether the smaller rolls can be entered free of duty under item 800.00, Tariff Schedules of the United States (TSUS), as products of the United States returned without having been advanced in value or improved in condition while abroad.

The merchandise itself, of which you submitted a sample, consists of a spun bonded nonwoven fabric of olefin man-made fibers. It is classifiable under the provision for nonwoven fabrics, of textile materials, whether or not coated or filled, of man-made fibers, in item 355.2500, Tariff Schedules of the United States Annotated, textile quota category 669. The Customs Regulations for textiles and textile products provide, at 19 CFR 12.130(c), that merchandise that falls within the purview of Headnote 2, Part 1, Schedule 8, TSUS, concerning U.S. products advanced in value or improved in condition abroad, may not, upon its return to the United States, be considered a product of the United States. For the reasons stated below, the textile product you would be importing would be subject to Headnote 2, and thus would not be considered a U.S. product; quota restrictions on imported textiles would apply and a Taiwan visa would be required at the time of entry.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E6

The process to which the fabric would be subjected in Taiwan, cutting into shorter lengths and rewinding into smaller rolls of the same width, would advance it in value and/or improve its condition and constitute an alteration for tariff purposes. We note T.D. 56448(1), in which the operation abroad of cutting U.S.-made yarn to shorter lengths and rewinding it on smaller reels was determined to be an alteration within the meaning of item 806.20, TSUS. Thus, while the fabric, when reimported, would not be eligible for duty-free treatment under item 800.00, TSUS, it would be eligible for a partial duty exemption under item 806.20, TSUS, assuming that all regulations are complied with. The rate of duty, to be assessed against the cost or value of the alterations, including the cost or value of any foreign reels or spools supplied, would be the rate of duty applicable to articles imported under item 355.25, TSUS, converted to an ad valorem rate. The 1986 column 1 rate of duty is 2 cents per pound plus 12.9 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Re: Decision on Application for Further Review of Protest No. 4503-6-000003

This protest was filed against your decision in the liquidations of December 20, 1985, entry Nos. 112954, dated July 26, 1985, and 113206, dated August 28, 1985, covering articles called "Key Lites."

FACTS:

The subject merchandise is known as "Key Lites," and consists of a light with a key holder. The light is specifically designed to provide low intensity illumination required to locate a lock or keyhole.

The importer believes the subject articles are properly classifiable as other portable lamps in item 683.80, Tariff Schedules of the United States (TSUS), since the articles are made to hold a key as well as provide illumination for its use. Upon importation, the articles were reclassified as flashlights in item 683.70, TSUS.

ISSUE:

Whether the "Key-Lite" is properly classifiable under the provision for flashlights in item 683.70, TSUS, or under the provision for other lamps in item 683.80, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E8

LAW AND ANALYSIS:

The definition of a flashlight is "a small battery operated portable electric light." See C.D. 2345. The addition of a physical device which may influence usage, such as a key holder, does not change the fact that the merchandise is a flashlight according to the above stated definition. See C.D. 4665. It is a well established Customs principle that the eo nomine designation will cover all forms of an article.

Note letter rulings 806008, May 19, 1983 and 810466, September 7, 1984, which have classified similar merchandise under the provision for flashlights in item 683.70, TSUS, with separate classification of the bulbs in item 686.80, TSUS.

Also, T.D. 56372(26) discusses an article which is similar to the merchandise which is the subject of this ruling and holds that a small lamp attached to a key chain which aids one in finding automobile keys, etc., is classifiable under the provision for flashlights, in item 683.70, TSUS.

HOLDING:

Thus, the "Key Lite" is properly classifiable under the provision for portable electric lamps with self-contained electrical sources...: Flashlights, in item 683.70, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

District Director of Customs
477 Michigan Avenue
Detroit, Michigan 48226

Dear Sir:

Re: Application for Further Review of Detroit Protest No. 3801-5-002062

This is a protest against your decision in the subject application for further review of a product known as fleshing grease classified under item 178.30, Tariff Schedules of the United States (TSUS). Protestant claims classification under item 177.56, TSUS, as tallow. The Government's position now is that item 177.72, TSUS, the provision for other non-edible greases, applies.

FACTS:

The product in question is fleshing grease. This grease is derived from fat of bovine origin. It is not mixed, sulfonated, or hydrogenated. It is a grease that is produced from the rendering of animal fat.

ISSUE:

Whether the imported fleshing grease is a tallow classified under item 176.56, TSUS.

DISCUSSION OF LAW:

The merchandise in question, "fleshing grease" is asserted by the importer to be rendered fat of bovine origin. He maintains that the merchandise is tallow but does not provide any support for his contention. No samples of the subject merchandise were supplied and no laboratory tests were conducted.

E11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

078059

Fleshing grease is defined in Fatty Acids: Their Chemistry, Properties, Production, and Uses, Klare S. Markley, Interscience Publishers (1967), as:

> Fleshing Grease, sometimes referred to as leather grease is the fat from directly under the skin of the animal.

By-Products of the Meat Packing Industry, Institute of Meat Packing (1950), reprints a table issued by the Office of Price Administration during the Second World War listing the full range of grades for animal fats and greases which we understand are generally accepted and followed by the trade. The table divides the various listed fats into two general categories, tallows and greases. Fleshing grease is clearly listed among the greases and not as a tallow. The table carries a footnote stating "Materials of less than 40 titer shall be deemed greases and materials of more than 39.9 titer shall be deemed tallows." On page 153 of the cited book, titer is defined as the solidifying point of a material's fatty acids, and as an indication of the hardness of the material in question. Since no samples were obtained for laboratory analysis, there is no established titer for the merchandise in question here.

The Summaries of Trade and Tariff Information Schedule 1, Volume 12, **Animal** and Vegetable Fats and Oils (1969) contains a general discussion of tallows and greases. However, this discussion contains no physical standards to differentiate between tallow and other animal oils, fats, and greases.

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The question of tallow versus grease was considered by the Customs Court in Armour & Co. v. United States, C.D. 383, (1940). The court discussed the titer test noting that it is a measure, expressed in degrees centigrade, and represents the solidifying temperature point of the fatty acids contained in molten grease or tallow. The court noted the same standard employed by the Office of Price Administration, that is, a product with a titer below 40°C would be a grease while a titer of 40°C or higher would make the product a tallow.

In the absence of a laboratory test indicating the actual titer it is not possible to determine whether a substance is a tallow or a grease. However, the foreign shipper did invoice the merchandise as fleshing grease. This is a term firmly established in the trade as indicating an inedible grease with a titer of less than 40° centigrade. Therefore, based upon an established trade meaning for the term employed by the exporter, "fleshing grease," and in the absence of any evidence from the importer showing that the merchandise is a tallow, it is properly classifiable under item 177.72, TSUS, as an animal oil, fat, or grease, other than edible.

CONCLUSION:

You are instructed to deny the protest, except to the extent reclassification of the merchandise as indicated above results in a partial allowance.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Mr. Willie Tan
General Manager
American International Knitters Corp.
P.O. Box 1280
Saipan Northern Marianas 96950

Dear Mr. Tan:

This is in reply to your letter of April 1, 1986, concerning the country of origin of certain garments.

You state in your letter that the garments will be made from unmarked knitted sweater fabric, although you indicate that shirts as well as sweaters will be made. The unmarked fabric is imported into the Northern Marianas where it is cut by means of electric or manual cutters into patterned garment pieces. Those pieces consist of many parts but are mainly the body, collar, and sleeves of the garments to made from them. Also in the Northern Marianas, an overlocking, sewing, or linking machine is then used to join the front and back pieces, the sleeves, and the collar. The resultant finished garment is then exported to the United States.

Based on the facts outlined above, the garments imported into the United States would be considered to be products of the Northern Mariana Islands and are eligible for duty-free treatment under General Headnote 3(a), Tariff Schedules of the United States, provided they meet the other requirements contained therein.

Sincerely,

Harvey B. Fox

Mr. Mitchell Katz
Fashion Rite Corp.
40 Nathan Place
Neptune City, New Jersey 07753

Dear Mr. Katz:

You have requested a tariff classification ruling for an article of apparel described as an infants' pram overall, a product of Taiwan.

The garment, style 31413, is sized for infants up to 24 months of age. It has long sleeves and legs and a stitched-on hood with a drawstring and snap fasteners. Two zippers extend down the front from the neck to the legs. Textile overlays and appliques ornament the front. The hood and torso are lined with a knit acrylic pile; the arms and legs are lined with woven nylon. The interior fill is polyester; the outer shell is woven of 65 percent polyester/35 percent cotton. Rib knit cuffs finish the arm and leg openings. An unconstructed hand cover, made of the same fabric as the outer shell with the same pile lining, lacking detailing for individual fingers, is attached to the end of each sleeve with two snaps. Foot covers, of the same fabric, having some elastic and resembling booties, are attached by means of snaps to the end of each leg.

This pram suit is classifiable as one complete article for tariff purposes. The hand and foot covers are imported together with the main part of the suit. The covers have no viable separate identity; they would not stay on the body unless snapped in place on the suit. They are not likely to be sold separately. The suit is classifiable as ornamented women's, girls', or infants' wearing apparel, of man-made fibers, not knit, other, other, under item 384.2697, Tariff Schedules of the United States Annotated, quota category 659.

Sincerely,

Harvey B. Fox

Ms. Angela De Gaetano
Chief, Customs Information Exchange
U.S. Customs Service
6 World Trade Center
New York, N.Y. 10048

Dear Ms. De Gaetano:

A Customs Form 6431 dated May 24, 1986, received in this office on April 7, 1986, concerns entry No. 85-914797-8 dated April 28, 1985, covering a shipment of Radicchio from Italy. This difference of opinion is not listed on the last list of differences circulated as CIE N89/79, Suppl.47 of May 1986.

Radicchio is described as a salad chicory. The sending port maintains that Radicchio is botanically the same as witloof chicory, a form of endive. Therefore, the sending port concludes that Radicchio is properly classifiable in item 136.10, Tariff Schedules of the United States (TSUS), which provides for witloof chicory.

Previous New York Ruling letters 816092, December 12, 1985, and 813297, May 24, 1986, found Radicchio to be classifiable under the provision for other fresh vegetables in item 137.97, TSUS.

Although they may be of the same species, Radicchio is of a different subspecies than witloof chicory and the two are not commercially interchangeable. Radicchio is a specialty item. It could not be commercially designated as witloof chicory. For the foregoing reasons, it is our position that Radicchio is properly classifiable under the provision for other fresh vegetables in item 137.97, TSUS.

Sincerely,

Arthur P. Scheffler

Ogdensburg, New York 13669

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 0712-5-000756

This protest was filed against your decision in the liquidation of various entries covering shipments of Windsor papers manufactured by Domtar Fine Papers in Canada.

This ruling concerns whether or not the papers at issue are coated or impregnated.

FACTS:

The papers at issue are Windsor papers which have been treated with a small amount of Baysynthol at the size press. Baysynthol is a maleic acid anhydride copolymer.

The import specialist liquidated the entries under the provision for printing paper, not lithographically printed, other, impregnated, coated or both, but not otherwise treated, in item 254.46, Tariff Schedules of the United States (TSUS).

The protestant claims that the papers are neither coated nor impregnated and that they should be classified under the provision for papers, not impregnated, not coated, book and printing paper, not specially provided for, in item 252.67, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

F4

018083

ISSUE:

Is paper which has been surface sized with Baysynthol classified as paper which has been impregnated or coated? Or is it classified as paper which has not been impregnated or coated?

LAW AND ANALYSIS:

The protestant claims that although Baysynthol is added to the instant papers at the size press, the papers are not impregnated or coated. It claims that addition of Baysynthol to the starch applied at the size press is not a treatment. It submits an affidavit from a technical expert who states that Domtar's Windsor Offset is neither coated nor impregnated. The expert defines "impregnation" as using a latex emulsion to alter the properties of the paper and "coating" as applying a pigmented coating to enhance the paper's printing properties.

In Customs Headquarters Ruling Letter (HRL) 018290, dated March 3, 1972, this office held that "...if the polymeric binder or other chemicals are added...as a treatment applied to the sheet or web of paper after it is formed on the paper making machine, the resultant paper is classifiable under the provision for papers impregnated, coated or both, but not otherwise treated, in item 254.80, TSUS...." Inasmuch as the instant papers are printing papers, they are properly classified under the provision for printing paper, impregnated, coated or both, in item 254.46, TSUS.

FS

In HRL 048308, dated January 6, 1977, a similar operation was discussed. The subject merchandise was a hanging paper made on a conventional Fourdrinier paper making machine. After the web was formed and passed through the driers, it was passed through a size press, where sizing, binder, and other additives were applied to the paper web. HRL 048308 stated "This Headquarters consistently has ruled that the addition of binders or other chemicals to the sheet or web of paper after it is formed on the paper machine results in a paper classifiable under the provision for papers impregnated, coated or both." HRL 048308 was followed by HRL 072501, dated April 12, 1983.

Following the precedent set in HRL 018920, HRL 048308 and HRL 072501, we find that the instant paper, which has been surface sized by Baysynthol, a maleic acid anhydride copolymer, after the web or sheet of paper is formed on the paper machine results in the classification of the papers under the provision for other printing paper, impregnated, coated or both, in item 254.46, TSUS.

HOLDING:

The instant Windsor papers treated with Baysynthol are classified as other printing paper, impregnated, coated or

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Dear Sir:

RE: Decision on Application for Further Review of Protest
No. 0712-4-001956

This protest was filed against your decision in the liquidation of nine entries covering shipments of Windsor Offset paper manufactured by Domtar Fine Paper Ltd. in Canada.

This ruling concerns the correct tariff classification of the paper.

FACTS:

The instant merchandise is described as Windsor Offset white sheet paper, not coated, not embossed, imported in rolls 29-3/4 inches wide, with a basis weight of 45 pounds based on a ream of paper 25 inches by 38 inches.

The protestant's broker claims that the instant paper belongs to the class or kind of paper which is chiefly used for printing paper and that it is classified under the provision for printing papers, book and printing paper, not specially provided for, in item 252.67, Tariff Schedules of the United States (TSUS).

The import specialist asserts that the paper is writing paper and is classified under the provision for writing paper weighing over 18 pounds per ream in item 252.75, TSUS.

ISSUE:

Is the instant paper classifiable as printing paper in item 252.67 TSUS, or as writing paper in item 252.75, TSUS?

RELEASED TO THE

LAW AND ANALYSIS

The protestant's broker claims that the Windsor Offset paper at issue here is chiefly used as printing paper if it is over 38 pounds basis weight (i.e., 40, 45 and 50 pounds basis weight) and is classifiable in item 252.67, TSUS. He presents a number of affidavits and cites United States v. Carborundum Co., 63 CCPA 98, C.A.D. 1172, cert. denied, 429 U.S. 979(1976), in support of his position.

The import specialist asserts that all Windsor Offset paper with a basis weight of 38 pounds (based on a ream of paper 25 inches by 38 inches), regardless of size, and all paper with basis weights from 40 pounds up to and including 50 pounds (based on a ream of paper measuring 25 inches by 38 inches), in the following sizes:

29-3/4 inches
29-23/32 inches
28-1/2 inches
25-1/2 inches
23-1/2 inches
14-7/8 inches
14-27/32 inches

constitutes writing paper classifiable in item 252.75, TSUS. He bases his assertions upon information received from the paper trade including Domtar, a Domtar customer, the American Paper Institute, and two American form bond paper manufacturers. (He stresses that his assertion applies only to regular Windsor Offset paper. Windsor Offset Opaque paper is not included, regardless of size or basis weight.) He also notes that, in his experience, over 50 percent of this type of paper is imported by manufacturers of business forms or of forms papers.

The protestant claims that Windsor Offset paper in the basis weight categories of 40 pounds and over belong to the class or kind of paper chiefly used in for commercial printing. The import specialist argues that the class or kind of paper proposed by the protestant is too wide. He argu

078084

F9

that the width of a paper in its condition as imported further defines the class or kind to which a paper belongs, citing as precedents Customs Headquarters Ruling Letter (HRL) 074564 of November 26, 1984, and Treasury decision 68-265(20). We agree.

The import specialist has found that Windsor Offset paper in roll width size of 29-3/4 inches (and the other sizes cited above) and in basis weights of 40 to 50 pounds inclusive are chiefly used in the United States as forms paper. Such chief use has previously been determined to be as writing paper. See HRL 065371, dated October 30, 1980, and HRL 074564, dated November 26, 1984. Following these precedents, we find that Windsor Offset paper in basis weights of 40 to 50 pounds inclusive (25 inches by 38 inches) and in the roll widths cited above are chiefly used as forms paper. We find that such paper is classified as writing paper weighing over 18 pounds per ream, in item 252.75, TSUS.

HOLDING:

The instant Windsor Offset paper in the above-mentioned basis weights and roll width sizes is classified as writing paper in item 252.75, TSUS. The protest should be denied in full. A copy of this letter should be sent to the protestant along with the CF19 Notice of Action.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Divisions

District Director of Customs
127 North Water Street
Ogdensburg, New York 13669

Dear Sir:

Re: Decision on Aplication for Further Review of Protest No. 0712-5-000688

This protest was filed against your decision in the liquidation on May 6, 1985, of entry No. 85-341527, dated April 26, 1985, covering a shipment of "Concorde Opaque-White" paper manufactured by Rolland Inc. in Canada.

This ruling concerns whether or not the paper in question is coated or impregnated.

FACTS:

The paper at issue is described as Concorde Opaque-White, size 35 inches, basis 25x38 -- 100 "M." The protestant states that the paper is internally sized with a "minimal addition of rosin in the stock with a small quantity of synthetic chemical in the starch. The synthetic chemical used in the products is SCRIPTSET, a copolymer of maleic anhydride." Scriptset (styrene maleic anhydride copolymer) is described by its manufacturer as a "film-former for surface treating paper and paperboard to improve printability, create good surface qualities, and impart water resistance."

F11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The protestant claims that the paper is neither coated nor impregnated and that it should be classified under the provision for papers, not impregnated, not coated, book and printing paper, not specially provided for, in item 252.67, Tariff Schedules of the United States (TSUS).

The import specialist liquidated the entry under the provision for printing paper, not lithographically printed, other, impregnated, coated or both, but not otherwise treated, in item 254.46, TSUS.

ISSUE:

Is paper sized with Scriptset classified as paper which has been impregnated or coated? Or is it classified as paper which has not been impregnated or coated?

LAW AND ANALYSIS:

The protestant claims that even though a miniscule amount of Scriptset is added to the paper at the size press, the criteria to be used in determining whether or not a paper is coated or impregnated is the nature of the process itself and, more important, whether a new surface has been created. The protestant claims that a new surface has not been created and that the imported paper is neither impregnated nor coated, therefore it is classifiable as printing paper, not impregnated, not coated, in item 252.67, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

F12

In Customs Headquarters Ruling Letter (HRL) 018290 dated March 3, 1972, this office held that "...if the polymeric binder or other chemicals are added...as a treatment applied to the sheet or web of paper after it is formed on the paper making machine, the resultant paper is classifiable under the provision for papers, impregnated, coated or both, but not otherwise treated, in item 254.80, TSUS...." Inasmuch as the instant paper is a printing paper, it is properly classified under the provision for printing paper, impregnated, coated or both, in item 254.46, TSUS.

In HRL 048308, dated January 6, 1977, a similar operation was discussed. The subject merchandise was a hanging paper made on a conventional Fourdrinier paper making machine. After the web was formed and passed through the driers, it was passed through a size press, where sizing, binder, and other additives were applied to the paper web. HRL 048308 stated "This Headquarters consistently has ruled that the addition of binders or other chemicals to the sheet or web of paper after it is formed on the paper machine results in a paper classifiable under the provision for papers impregnated, coated, or both."

Protestant's claim that the criteria to determine whether or not a paper is coated or impregnated is the nature of the process itself and whether a new surface has been created were answered in HRL 072501, dated April 12, 1983. In HRL 072501,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

we found that a paper which had been surface treated with a sizing containing a significant amount of clay was classified under the provision for other printing paper, impregnated, coated or both, in item 254.46, TSUS. We observed that "If we read the entire definition of 'coating,' it is apparent that the Dictionary of Paper specifically includes surface sized paper among those papers which have been coated." We also found that there are many different processes which constitute a "coating" operation and that coating did not necessarily create a new surface on paper.

Following the precedents set by HRL 018290, HRL 048308, and HRL 072501, we find that the instant paper, which has been treated by Scriptset (styrene maleic anhydride copolymer) after the web or sheet of paper is formed on the paper machine results in the classification of the paper under the provision for other printing paper, impregnated, coated or both, in item item 254.46, TSUS.

HOLDING:

The instant paper treated with Scriptset is classified as other printing paper, impregnated, coated or both, in item 254.46, TSUS. The protest should be denied in full. A copy of this letter should be sent to the protestant along with the CF 19 Notice of Action.

Sincerely,

for Harvey B. Fox

Department of External Affairs
125 Sussex Drive
Ottawa, Ontario K1A 0G2
Canada

Dear Mr. Kowal:

On behalf of Edwards Steel Fabricators, Inc., of Toronto, you have requested a tariff classification ruling for some fabricated single and multi-pole steel structures. You have provided illustrated literature.

The articles in question are of non-alloy steel. They are available in single-pole center and offset mount constructions, or in various multi-pole configuration constructions. The structures are used in the outdoor advertising sign industry, with the signs themselves to be supplied by the U.S. customers.

These articles are classifiable as other base metal structures of iron or steel under item 653.00, Tariff Schedules of the United States. If they are products of Canada, they are not subject to any Voluntary Restraint Agreements (VRA's), and no export certificates would be required. If there is any question as to whether, for tariff classification purposes, the structures would be considered products of a country subject to VRA's, you may wish to consult with the International Trade Administration, U.S. Department of Commerce, for information concerning VRA requirements.

Sincerely,

Harvey B. Fox

SUBJECT : Reissuance of Protest and Application for Further Review Number 1303-5-000459

On October 2, 1986, this office issued a decision allowing the above-noted protest. Further review of the matter reveals that decision to be incorrect. Import Specialist Duda alertly identified an error in the classification due to a miscalculation of the effective date of Headnote 1(c), Schedule 7, Part 1, Subpart C, TSUS. She has withheld issuance of the October 2, 1986, letter pending receipt of a corrected decision.

The glove styles which were the subject of the protest are more properly classifiable as gloves of rubber or plastic under item 705.86, TSUS. The attached corrected decision reflects this change and should be issued to the protestant. The protest must, therefore, be denied. The decision of October 2, 1986, is revoked.

Re: Decision on Protest and Application for Further Review
Number 1303-5-000459

Dear Sir:

The above noted protest and application for further review were filed by counsel for protestant Plasco Safety Products, Inc., of Springfield, Ohio. At issue is the classification of vinyl-coated cotton gloves which are the products of Hong Kong. Two different styles of gloves are involved.

Customs claims that the gloves are properly classifiable as either gloves ... : of vegetable fibers: made from a pre-existing machine-knit or -woven fabric, or any combination of such fabrics: woven, under the provisions of item 704.40, Tariff Schedules of the United States (TSUS), dutiable at the rate of 25 percent ad valorem, or not woven, under the provisions of item 704.45, TSUS, also dutiable at the rate of 25 percent ad valorem. Importations of gloves which are the products of Hong Kong under either of these item numbers are subject to the restrictions of quota category 331, in that visas from the country of origin must be obtained in order to permit their entry into the United States.

Protestant claims that the gloves are properly classifiable as gloves of rubber or plastics: with textile fabric fourchettes or sidewalls, under the provisions of item 705.85, TSUS, dutiable at the 1984 rate of 14.4 percent ad valorem. Gloves classifiable under this item number are not subject to quota restrictions.

FACTS:

In November and December of 1984 at Baltimore, Maryland, protestant Plasco Safety Products, Inc., imported two styles of vinyl coated cotton gloves under the following entry numbers: 85-195063-9, -196206-7, -196305-3, and -196304-0. Style number 128 is composed of vinyl-coated knit cotton fabric. Style number 126 is composed of vinyl-coated woven cotton fabric.

078142

G3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Redelivery of all gloves was requested because Customs found protestant's claimed classification to be incorrect. Protestant entered all the gloves under the classification as gloves of plastic with textile fourchettes under the provisions of item 705.85, TSUS. Customs determined that these gloves were more properly classifiable as gloves of vegetable fibers under items 704.40, or 704.45, TSUS. Additionally, classification of the gloves under the textile provision imposed visa requirements on their entry into the United States. Inasmuch as no visas had been obtained, redelivery was requested. Protestant filed this protest and application for further review in a timely manner in response to the denial of entry.

241820

ISSUE:

Are the gloves properly classifiable as gloves of rubber or plastics with textile fabric fourchettes under item 705.85, TSUS, or as gloves of vegetable fibers, under items 704.40 or 704.45, TSUS, and thereby subject to visa requirements pursuant to textile quota category 331?

ANALYSIS:

Counsel claims that Customs requests for redelivery have been issued improperly because a uniform and established practice exists to classify each style of glove as a glove of rubber or plastic. The practice claim is based on administrative precedent and uniform liquidations.

Plasco style 126 is composed of base fabric of plain woven cotton. Both sides of the base fabric have been heavily napped. The exterior of the base fabric is coated with plastic. Textile fibers from the nap penetrate through the coating. Tactilely the sample is furry or fuzzy. The weave construction is barely visible through the plastic. The glove has one textile fourchette on the inside of the pinky.

Plasco style 128 is composed of a base fabric of knit cotton, heavily napped on both sides. The exterior of the base fabric is coated with plastic. Textile fibers from the nap penetrate through the coating, but these fibers can only be seen microscopically. The coating is a flecked brown plastic and the sample has a rough grainy feel that does not resemble a textile. It has one textile fourchette on the inside of the pinky.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC_____

G4

A uniform and established practice exists to classify these styles of gloves as gloves of rubber or plastic. See Customs Ruling Letters of December 19, 1973 (Control No. 029939) and September 16, 1986 (Control No. 077460).

Headnote 1(c) of Schedule 7, Part 1, Subpart C, TSUS, provides that for purposes of the subpart, "the term '<u>with fourchettes</u>' includes only gloves which, at a minimum, have fourchettes extending from fingertip to fingertip between each of the four fingers." The subject gloves contain only one fourchette and are, therefore, precluded from classification under item 705.85, TSUS, as gloves of rubber or plastics, with textile fourchettes.

<u>HOLDING</u>:

We find the gloves to be classifiable as gloves of rubber or plastics, other, under the provisions of item 705.86, TSUS, dutiable at the 1984 rate of 21.9 percent ad valorem. Gloves classifiable under this item number are not subject to quota restrictions.

The classification of the gloves is not the claimed provision or the assessed provision. Because the correct classification is not one that is subject to import restrictions, the protest is granted in part, insofar as it relates to the entry of the gloves. However, the rate of duty under the correct classification is more than the rate under the claimed provision. Accordingly, the protest is denied in part as to rate of duty payable. Liquidation of the entries must occur under item 705.86, TSUS. A copy of this decision should be given to the protestant when notice of action is given on Customs Form 19.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Degussa Corporation
P.O. Box 2004
Teterboro, N.J. 07608

Dear Dr. Flaskamp:

You have asked us to reconsider T.D. 69-12(10), in which glycidol was determined to be classifiable under item 428.46, Tariff Schedules of the United States (TSUS), now item 428.47, as other alcohols, polyhydric . . . , and esters, ethers, and ether-esters and substituted derivatives. You have submitted literature describing glycidol (2,3-Epoxypropanol-1), which is a product of the Federal Republic of Germany.

Glycidol, a colorless and almost odorless liquid, contains two functional groups in the same molecule: an epoxide and a substituted monohydric alcohol. It contains no polyhydric alcohol functional groups, and therefore should not be classified under item 428.47, TSUS.

The Headnote to Subpart D, Part 2, Schedule 4, TSUS, provides: " . . . . Any compound which is described in more than one functional group is classifiable in the first group in which it is described." Epoxides are classifiable under item 428.88, TSUS. The substituted monohydric alcohol is classifiable under item 429.95, TSUS, a provision for other organic compounds. Glycidol is thus classifiable under item 428.88, TSUS, according to the above headnote.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

San Francisco, California 94103

Dear Mr. Hsia:

You state in your letter of April 17, 1986, that certain hooks that you have imported from Taiwan have been classified at the port of San Francisco under item 657.3535, Tariff Schedules of the United States Annotated (TSUSA), a provision for other articles of copper, not coated or plated with precious metal. You believe that the hooks are properly classifiable under item 654.2590, TSUSA, a provision for other articles of brass, not specially provided for, not coated or plated with precious metal, of a type used for household, table, or kitchen use; toilet and sanitary wares. You have submitted samples and illustrated literature.

You state in your letter that these articles are spring hooks, of a brass alloy; the literature states that they are snap hooks of solid bronze. You state further that the hooks, each of which is equipped with a small spring controlled by a bolt, are sold in hardware stores for use on the ends of rope, chain, straps, or string; or for use with hanging planters. They are not used in heavy industry or the plumbing business.

These hooks have a wide variety of uses; we have no evidence indicating that they are chiefly used for the household, table, or kitchen. It would therefore be inappropriate to classify them under item 654.2590, TSUSA. They were properly classified under item 657.3535, TSUSA, as articles of copper.

PUBLIC _____ RELEASED TO THE

10 OCT 1986

Area Director of Customs
JFK Airport Area
JFK Airport, Bldg. 178
Jamaica, New York 11430

Dear Sir:

Re: Request for Further Review of Protest No. 1001-5-003521 of March 22, 1985

This protest, filed by Sharretts, Paley, Carter and Blauvelt on behalf of Pier Connection, Ltd., concerns your classification of certain men's garments, made in India, as shirts. The protestant claims that they are properly classifiable as vests.

Samples of styles 47173, 7173, and 7562 have been submitted to this office. All are of 100 percent woven cotton fabric, sleeveless, and unlined, with full front openings. They are not pullover, as stated. Style 47173 is the same as style 7173, but in a boys' size. Style 7173 has a concealed front button closing, except for the seventh button at the waist; elastic all the way around the waist; and a stitched-on hood with a drawstring. A strip of fabric of a contrasting color finishes each armhole edge. A three-inch wide contrasting color strip across the chest forms an integral part of the garment and has a breast pocket set into it on each side. A small, plain, rectangular label about 1-3/8 inches by 1/4 inch bearing the words "Pier Connection" is stitched to the top of the strip finishing the left armhole. Style 7562 has six snaps down the front and elastic only at the sides of the waist. The collar band is of a contrasting color. A five-inch wide contrasting color strip extends downward at an angle from each side of the placket to the side seam and forms an integral part of the garment. A pocket with a snap flap is set in below the strip on each side. The same type of label as the one on style 7173 is stitched to the top of the left armhole.

A vest is normally worn over another outer garment. See, for example, ruling 074584 of December 13, 1984. It is generally a short garment, reaching to the waist, without sleeves, buttoning down the front, and may be worn under another garment, such as a suit jacket. See T.D. 78-205. A judgment as to what an article of apparel is for tariff purposes, such as a coat or jacket, blouse or shirt, will be made

G10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

in the individual case, based on such factors as the cut, overall appearance, style, and weight. See ruling 039454 of May 9, 1975.

Examination of the three submitted samples indicates that none can be properly classified as a vest. The elastic makes gathers that would be too bulky if any of the garments were worn under a jacket. The contrasting strips finishing the armholes on Style 7173 would also create bulk. All three garments lack the deep V neckline and oversized armholes that often characterize vests. Rather, each is styled in such a way as to provide adequate coverage if worn alone next to the skin or over underwear, without another shirt. In fact, given the fit of the collars and armholes in particular, they would probably be uncomfortable if worn over other outer garments. Style 7562 has the close-fitting collar and collar band construction generally seen on men's dress shirts. Since the three garments are designed for men's or boys' wear and adequately cover the neck-to-waist area, they are properly characterized as shirts, and classifiable as such. They were correctly classified under then-item 379.5550, Tariff Schedules of the United States Annotated, as other men's sport shirts, not ornamented, of cotton, not knit.

Counsel for the importer does not advance any arguments in support of his contention that these garments are vests, and not shirts. Rather, he argues that they cannot in any case be classified as shirts because for Customs to do so would constitute a change without notice in the uniform and established practice of classifying these garments as vests. Counsel believes that a finding of such a practice was made in C.S.D. 84-111, but in fact no such finding was made. That decision, recognizing that in the past woven sleeveless men's garments had not been classified as shirts because sleeveless men's shirts were not an article of commerce, determined that because such shirts do now in fact exist, they are indeed classifiable as shirts. This conclusion is not at all the same as a determination that all woven sleeveless men's garments had been uniformly classified as vests, let alone that garments of the type the subject of this protest had been so classified. Before issuing that ruling, in which two pullover garments were classified as shirts and another garment as a vest, Customs in fact determined that woven sleeveless shirts, as new items of commerce, had been classified variously at different ports. One reason for issuing that decision was thus to clarify the confusion that had existed.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G11

102870

Counsel argues further that these garments cannot be classified as shirts because C.S.D. 84-111 also included a determination that such sleeveless garments were not included in the eo nomine designation for shirts at the time of the enactment of that provision. However, what that decision actually stated was that "[t]here was a time when all men's and boys' woven shirts had sleeves," i.e., at one time, sleeveless men's shirts did not exist in the trade and commerce of the United States. As counsel correctly states, if an article exists at the time of the enactment of the statute and is not covered by the eo nomine provision at that time, it cannot subsequently be held to be classifiable in that provision. The point, however, was that such articles had not existed. As counsel also correctly states, a tariff provision will include all articles subsequently created that come within its scope. Thus men's woven sleeveless shirts, now that they are becoming common in that trade, can properly be included within the provisions for men's shirts.

You should deny this protest in full. A copy of this decision should be sent to the protestant along with your Form 19 Notice of Action.

Sincerely,

John T. Rath

Mr. A. Roser
Roser Customs Service, Inc.
P.O. Box 48
Brownsville, Texas 78520

Dear Mr. Roser:

You have requested a tariff classification ruling for base metal name plates that you plan to import from Mexico. You have also inquired as to whether the assembly operation involved, which makes use of U.S.-fabricated components, would result in the qualification of the finished plates for duty reduction under item 807.00, Tariff Schedules of the United States (TSUS).

You have submitted a sample of an assembled name plate and of the U.S.-fabricated materials to be exported for assembly, the latter consisting of a gilding plate of 95 percent copper and 5 percent zinc, 2 studs, and vitreous enamel powder for each plate. You have also described the processing to be performed in Mexico. The first step would be the welding of the two studs to the back of the gilding plate. After the plate is degreased,,the vitreous enamel powder would be dissolved in a solvent and applied to the plate. The plate would then be placed in an oven at 1200 degrees F to create the enameling. After grinding, refiring, and polishing, the plate would be chrome plated. The final steps would be polishing, inspection, and packaging for shipment to the United States.

To qualify for duty reduction equal to the cost or value of U.S.-fabricated components, articles sought to be classified under item 807.00, TSUS, must have been assembled abroad in whole or in part of such components. The U.S.-fabricated components must have been exported in condition ready for assembly without further fabrication; must not have lost their physical identity in the articles by change in form, shape, or otherwise; and must not have been advanced in value or improved in condition abroad except by being assembled and except by operations incidental to the assembly process, such as cleaning, lubricating, and painting. The Customs Regulations concerning this provision are set out at 19 CFR 10.11-10.24.

G13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Although the welding of the two studs to the gilding plate is an assembly operation contemplated by section 10.16(a) of the Regulations, we view the subsequent operations as significant processing not incidental to the assembly. An exemption under item 807.00, TSUS, is therefore precluded. Specifically, the application, firing, and grinding of the enamel paint, as well as the plating with chrome, are intended to enhance the appearance of the plate, imparting a distinctive feature. Section 10.16(c)(3) specifically states that such an operation is not considered incidental to assembly for purposes of item 807.00, TSUS.

Although the chrome plating may result in protective properties for the two studs that may not be visible in the final use of the gilding plate, these properties are a result that is subsidiary to the primary purpose of the operation, which is to enhance the appearance of the plate and impart significant new characteristics to the article. Thus, the two studs, after being welded to the gilding plate, along with the gilding plate itself, cannot be exempted from duty under item 807.00, TSUS, since they are subjected to an operation that is more than incidental to the assembly, according to section 10.13 of the Regulations. Further, with regard to the enamel powder, section 10.16(a) of the Regulations specifically excludes amorphous solids from item 807.00, TSUS, treatment.

The finished nameplates would be classifiable under item 652.75, TSUS, as base metal signs. This item currently carries a column 1 rate of duty of 4.5 percent, scheduled to be reduced to 3.8 percent in 1987.

Sincerely,

Arthur P. Schaffner

Area Director of Customs
New York Seaport
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-5-006979

This protest was filed against your decision in the liquidation on March 1, 1985, of entry No. 85-793181-4 dated January 23, 1985, covering a shipment of certain "Rainbow Sprites" manufactured in Hong Kong.

FACTS:

The merchandise involved called a "Rainbow Sprite" is a 5-1/2 inch or 10 inch plus stuffed figure. The head has eyes, a round nose and a mouth. The entire head, surrounded by colorful fur, has stars, legs and arms attached to the fur. This merchandise was classified in liquidation under the provision for toy figures of animate objects (except dolls): not having a spring mechanism stuffed: valued not over 10 cents per inch of height in item 737.28, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 13.3 percent ad valorem.

The protestant claims that the "Rainbow Sprite" is entitled to free entry under the provision in item 912.30, TSUS, for stuffed dolls (with or without clothing) * * * (provided for * * * in item 737.23 * * * Part 5E, Schedule 7).

ISSUE:

Is the "Rainbow Sprite" figure within the purview of the term "doll" for tariff purposes?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A3

LAW AND ANALYSIS:

The protestant defines the term "doll" as "an article with human characteristics which is used as a plaything by children." Russ Berrie & Co., Inc. v. United States, 76 Cust. Ct. 218, C.D. 4659 (1976).

Following this definition the protestant asserts that the "Rainbow Sprites" have numerous human characteristics such as arms, legs, hands, and feet. Their faces have eyes, a nose, and a mouth. These figures with human characteristics must be classified as dolls.

As support for its position the protestant cites Headquarters Ruling Letters (HRL) Nos. 066594 dated March 19, 1981, and 068813 dated December 4, 1981, wherein certain "Rainbow People" were held to be properly classifiable under item 737.21, TSUS, as dolls. The "Rainbow People" were described as "small PVC figures having a thumb and three fingers, large, heads, no necks and unusually large feet," and "comic in appearance." The protestant asserts that the "Rainbow Sprites" and the Rainbow People" have similar features except that the feet of the "Rainbow Sprites" are of normal size.

The "Rainbow Sprites" were advertised in the 1984 Mattel catalog as "fun, furry animals, so soft and cuddly." You have submitted copies of pages from the 1986 catalog which refers to them as dolls. Regardless of the change in designation of the merchandise, we are of the opinion that the 1984 catalog more aptly describes the merchandise.

The "Rainbow Sprites" are not similar to the "Rainbow People." The "Rainbow People" were "solid plastic figures of young children that are comic in appearance" whereas the "Rainbown Sprites" represent furry animals.

In HRL 068813 this office stated the following:

A4

078215

> The Customs Service has considered human figures with certain types of attachments to be dolls for tariff purposes as long as the attachments are not of such substantial physical size as to detract from the common and commercial definition of the term "doll." In other words, where the difference in an article constitutes something in the nature of an improvement or amplification, and the essential character is preserved or incidently altered, an unlimited eo nomine designation will include the merchandise so altered.

The protestant claims that in the instant situation the amplification or incidental alteration of certain human features in the "Rainbow Sprites," such as the arms or head, do not detract from their doll-like appearance. Thus, they feature human characteristics and are used as dolls by children and should be classified accordingly.

It is our observation that the head of the "Rainbow Sprite," "surrounded by colorful fur and having stars and legs attached to the fur," is not something in the nature of an improvement or amplification of the product. This feature of the merchandise in our opinion is not a human characteristic. We also note that this non-human characteristic completely dominates the entire article. Accordingly, we do not consider the "Rainbow Sprite" to be within the purview of the term "doll" for tariff purpose.

HOLDING:

The "Rainbow Sprites" were properly classified under item 737.28, TSUS. The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Steven P. Kersner, Esq.
Brownstein, Zeidman & Schomer
Suite 900
1401 New York Avenue, N.W.
Washington, D.C. 20005-2102

Dear Mr. Kersner:

On behalf of Inner Secrets, Inc., you have requested a tariff classification ruling for a women's garment. No country of origin is given.

The submitted sample has no style number and is not woven as stated, but knit, of a 65 percent polyester-35 percent cotton ribbed fabric. The garment would cover the entire torso and features a turtle neck, a snap opening at the crotch, a trim that serves to finish the raw edges on the leg openings, and fiber-fill padding of varying width around each armhole edge, extending down nearly ten inches from the shoulder.

You suggest that this article is classifiable under item 378.05, Tariff Schedules of the United States (TSUS), a provision for ornamented underwear. However, the garment is neither ornamented nor underwear. You also suggest that it would fall under quota category 352. However, that category is for articles in chief value of cotton.

Headnote 1 of Subpart 6E, TSUS, provides for the classification in that subpart of underwear not specially provided for. In determining what constitutes underwear, Customs has maintained that the term refers to garments worn under other garments and not exposed to view when the wearer is conventionally dressed for appearance in public, indoors or out of doors. This view is consistent with the court's holding in Children's Hose v. United States, 55 Cust. Ct. 6, C.D. 2547 (1965), that garments such as leotards and tights, partially covered and partially exposed during normal wear, could not be classified as underwear.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A6

It is evident that portions of this turtleneck garment will be visible during normal wear, such as with slacks, shorts, a skirt, or a jumpsuit. The presence of a snap closure in the crotch does not make the garment underwear; in fact, the snaps could be uncomfortable if worn against the skin. Further, the fact that a garment is worn against the skin does not make it classifiable as underwear; both diapers and swimsuits are so worn, but are not underwear. You state that the presence of the foam padding indicates that the garment is intended to be worn under outer garments lacking the currently popular shoulder pads, to give the effect of shoulder pads. Even if it were so worn, the turtle neck would still be exposed, and classification as underwear is thus precluded. Further, the fact that the fiber-fill extends ten inches below the shoulder would prevent the garment from being worn under most garments with normal set-in sleeves. Only an outer garment with a deeply cut raglan or dolman sleeve would be large enough to accommodate the foam. Such sleeves are usually made with raglan shoulder pads (if any), a specially cut oval pad that rides on top of the shoulder rather than being stitched around the edge of the sleeve seam, as normal shoulder pads are, since these sleeves lack the usual set-in sleeve seam.

This article is of the type that we have frequently classified as body suits. Body suits, by their structure and appearance, are capable of being worn as outerwear. They are one-piece garments similar to leotards, covering the torso, having leg openings, and designed to be form-fitting. See, for example, file 073980 of April 23, 1985. This garment is thus classifiable under item 384.8022, Tariff Schedules of the United States Annotated, quota category 659, as other women's wearing apparel, not ornamented, of man-made fibers, knit, blouses, . . . body suits.

Sincerely,

For Harvey B. Fox

Ms. Suzanne Goodwin
Columbia Sportswear Company
Post Office Box 03239
6600 North Baltimore
Portland, Oregon 97203

Dear Ms. Goodman:

Your letter dated June 2, 1986, requested the tariff classification of certain wearing apparel.

The sample garment is a pair of men's boxer-style shorts manufactured from a woven fabric that appears to be in chief value of cotton. They feature an elasticized waistband with a drawstring, a nylon liner and side pockets.

In determining whether men's boxer-style shorts are classifiable as shorts or as swimwear, the Customs Service has stated in a ruling dated May 2, 1984, file 073387 that:

> the term "swimwear" connotes garments which are intended for wear in water and which are predominantly used in that manner. We recognize that men's swimwear, especially in ocean beach areas, may be worn in certain commercial areas adjacent to, or in the immediate proximity of the water area by someone enroute directly to, or from, that area. Generally, however, we do not believe that swimwear has any real use other than being worn as such. Except for travel to and from the water, we believe that the use of swimwear for any activity other than swimming constitutes a fugitive use.

In distinguishing between shorts and swimwear, the Customs Service considers, inter alia, the weight and absorbancy of the fabric and the liner.

Given the lightweight fabric of the garment and the liner's lack of absorbancy, it is our judgment that the sample garment is classifiable as swimwear in item 381.65, Tariff Schedules of the United States.

09 SEP 1986 CLA-2 CO:R:CV:G
078253 DW

Mr. Diego A. De Obaldia
Fanasa
Apartado 2130
Panama, 1, R.P.

Dear Mr. De Obaldia:

This is in further response to your request for a ruling on the country of origin of certain polypropylene bags. You responded to our request for additional details by furnishing this office with samples and a supplemental statement dated December 27, 1985.

The first sample is a fabric composed of polypropylene strips that is woven in Taiwan and measures approximately 45 inches long and 40 inches wide. The other sample is a finished bag with dimensions of approximately 45 inches long and 26 inches wide that is manufactured from the polypropylene fabric.

Your submission indicates that the production process involves sending the cloth that is manufactured in Taiwan to Panama where it is cut to length, printed with the client's logo, folded, and overlocked on the bottom and side. Some of the bags are hemmed on the mouth to provide additional strength.

In determining the country of origin of textiles and textile products that consist of materials produced or derived from, or processed in, more than one country, the imported article is considered to be a product of that country where it last underwent a substantial transformation. A textile or textile product is considered to have undergone a substantial transformation if it has been transformed by means of substantial manufacturing or processing into a new and different article of commerce.

Our regulations concerning the country of origin of textiles state that cutting to length or width and hemming or overlocking fabrics which are readily identifiable as being intended for a particular commercial use usually are not considered to be a product of that country. Section 12.130(a)(2)(ii), Customs Regulations. Thus, the fabric in question which is woven in Taiwan remains a product of that country unless it undergoes a substantial transformation in Panama.

A9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Unmarked polypropylene fabric can and is made into a variety of articles having different uses, including, inter alia, tarpulins, articles for soil irrigation and squares for wrapping around the roots of shrubs and trees. Based on an examination of the polypropylene fabric in issue, we believe that the required nexus in terms of ultimate use does not exist between the fabric and the finished bag. It is our judgment that the fabric as it left Taiwan was not reasonably identifiable as being intended for a particular commercial use.

The textile rule on country of origin contained in section 12.130, Customs Regulations, requires us to consider certain criteria in determining whether the merchandise has undergone substantial manufacturing or processing operations. These include the physical change in the material or article, time involved, complexity of the operations, degree of skilled labor and value added to the article.

In the landmark case of Uniroyal, Inc. v. United States, 3 CIT 220, 542 F. Supp. 1026, 702 F. 2d 1022 (1982), the court stated that a substantial transformation will occur from processing that results in an article having a name, character or use differing from that of the imported article. The same court recognized that a substantial transformation will not result from minor processing which leaves the identity of the imported article intact. Uniroyal, at p. 224.

Our appellate court held in Belcrest Linens v. United States, 741 F. 2d 1368 (1984), that embroidered cotton pillowcases that were cut, sewn and packaged in Hong Kong from bolts of fabric which were woven, embroidered and marked for cutting in the People's Republic of China were products of Hong Kong under General Headnote 3(f). Customs had assessed duty at the column 2 rate of 90 percent ad valorem on the pillowcases as products of China, pursuant to General Headnote 3(e), whereas the importer claimed as products of Hong Kong, the merchandise should be assessed at a column 1 duty rate of 34 percent ad valorem.

In affirming the trial court, the court stated that the embroidered and marked bolts of fabric were not dedicated to use as pillowcases, but were capable of other commercial uses. Following the principle set out in the Uniroyal decision that minor assembly operations that leave the identity of the article intact do not cause a substantial transformation, the court determined that the processes performed in Hong Kong were not minor assembly operations, but under the test of substantial transformation were processes that caused a change in identity, character and use. The court ruled that in Hong Kong the embroidered fabric was substantially transformed into a new and different article of commerce known as a pillowcase.

A10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Inspection of the merchandise at hand persuades us that after the cloth is sent to Panama where it is cut, printed, folded and sewn into a bag, a new and different article of commerce emerges. We conclude that the essence of the finished bag is not manifested until the fabric is processed in Panama. Following Belcrest Linens, it is our view that the processing performed in Panama causes a change in the identity, character and use of the merchandise.

In reaching this conclusion, we note that it differs from the ruling issued on December 9, 1985, file no. 077131, where polypropylene bags made from tubular woven fabric were considered to be products of the country where the fabric was woven. Decisive in that case were our findings that the tubular fabric was readily identifiable as being intended for a particular commercial use and was the essence of the finished bag.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

Alan R. Klestadt, Esq.
Grunfeld, Desiderio, Lebowitz & Silverman
Two World Trade Center
Suite 2238
New York, New York 10048-0654

Dear Mr. Klestadt:

On behalf of Murjani Marketing Group, Ltd., you have requested that we reconsider Region II Ruling No. 817320 of March 20, 1986. That decision determined that a particular skirt was ornamented for tariff classification purposes. We have considered your submission and have decided that ruling 817320 was correct as issued.

The women's skirt in question is assumed to be a product of Hong Kong. It is made of a 100 percent cotton woven denim fabric that has a colored warp yarn and a white filling yarn. A full-length opening down the center front fastens with five snaps. There is a single vertical leather loop with the Coca Cola logo at the center back of the waistband and a five-inch slit at the lower edge of the center back seam. A large unsecured patch pocket is centered on each side seam.

V-shaped double-needle stitching penetrates a single layer of fabric across each pocket. Zig-zag stitching penetrates the facing and shell from the waist to the lower edge on one side of the opening. All of this stitching is readily visible and decorative. Since the fabric is woven of a colored and a white yarn, the colored stitching is readily visible against the two-colored background; it is not necessary to examine the garment closely in order to see the stitching. It forms a decorative pattern as well, a V-configuration and a zig-zag. We agree that it ornaments the garment.

Neither the stitching on the pockets nor the zig-zag stitching down the center front has any function. You state that the zig-zag prevents the facing from separating from the skirt body and that it is required to prevent the opening edge from buckling. In fact, however, the facing is held in place by a straight row of stitching down the length on either edge of the facing and by the snaps. If it were necessary, the zig-zag stitching would likely have been put on both opening edges instead of only on the outer edge visible during wear. With regard to buckling, the zig-zag stitching actually contributes to it; the side without this stitching is in fact neater and flatter, though less decorative.

A12

The stitching and garment in question here contrast with those discussed in files 065245 and 801705, of July 24, 1980, and November 27, 1981, respectively. In the former, white stitching on white pants pockets was determined to be "not readily visible"; in the latter, blue stitching on blue pants was determined to be "the same color as the fabric and ...barely visible." We note file 075866, of July 8, 1985, in which several rows of stitching placed on one side only of a shirt placket, the visible side, were determined to have no function.

The skirt was properly classified under item 384.0941, Tariff Schedules of the United States Annotated (TSUSA), quota category 342. We affirm ruling 817320.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. Laura Cobb
ERO Industries, Inc.
5940 W. Touhy Avenue
Chicago, Illinois 60648

Dear Ms. Cobb:

You have requested a ruling on the tariff classification of a transformable toy from Taiwan. A sample was submitted along with your letter dated April 24, 1986.

The sample known as a popple is a toy that can be converted into a nap bag. In its toy form, the article is composed of a pile fabric, and consists of an animal's head stuffed into a big pouch. The head has ears and hair composed of textile material. Arms and a tail with a pompon protrude from the pouch. The toy can be transformed into a nap bag by pulling the head out of the pouch. By telephone on September 11, 1986, you stated that the component material in chief value is of man-made fibers.

You contend the article is classifiable under the provision for toy figures of animate objects (except dolls), not having a spring mechanism, stuffed and valued over 10 cents per inch of height, in item 737.30, Tariff Schedules of the United States (TSUS), because it is chiefly used for amusement.

Schedule 7, Part 5, Subpart E, Headnote 2, TSUSA, provides that "For the purposes of the tariff schedules, a "toy" is any article chiefly used for the amusement of children or adults."

Here we have an article that has discrete, co-equal functions as a toy and as a nap bag. Neither of the functions is dominant. This means that the article does not have a chief use. The appropriate classification is under a basket provision based upon the component material in chief value. The sample is classifiable under the provision for articles not specially provided for, of textile materials, of man-made fibers, other, in item 389.62, TSUS, and dutiable at the rate of 4 cents per pound plus 10 percent ad valorem.

We have learned that the merchandise as imported will have a round label with a picture of the popple attached to the bottom of the article. It appears that such a label would be

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A14

decorative and ornament the article. If it is permanently affixed and does, in fact, ornament the article, it is classifiable in item 386.13, TSUS. Articles from Taiwan classifiable in this provision are eligible for an exemption from duty under the Generalized System of Preferences upon compliance with all applicable regulations.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

District Director of Customs
Two India Street
Boston, Massachusetts 02109

Dear Sir:

Re: Request for Further Review of Protest No. 0401-5-000493 of April 25, 1985

This protest, filed by Grunfeld, Desiderio, Lebowitz and Silverman on behalf of Rolf C. Hagen (USA) Corporation, concerns your classification of certain merchandise called "Small Pals Home" as luggage under item 706.52, Tariff Schedules of the United States (TSUS). The protestant claims that it is properly classifiable as household articles of rubber or plastics under item 772.15, TSUS. For the reasons stated below, we are in agreement with the protestant.

The merchandise is a series of clear plastic boxes, roughly rectangular in shape, in four graduated sizes. A sample of each was submitted to this office. Each box has four plastic "feet." Each has a snap-on plastic lid with air vents all around its sides and all over the top. A "trap door" in each lid allows for feeding of the caged animals. The three smaller sizes have handles attached to the lid. Each contains a card advertising the article in French and English as a home for small animals including reptiles or goldfish. The boxes are products of Japan and have instructions stamped into the plastic on the bottom in Japanese giving precautions for the use of these "household articles" (katei yohin). Users are advised not to place the boxes near fire (Japanese homes have oil, gas, or electric room heaters rather than central heat). The importer's submission includes photocopies from an advertising catalog showing the boxes advertised as animal homes.

We have previously ruled that carriers designed to transport animals during travel are classifiable as luggage according to Headnote 2(a) of Subpart D, Part 1, Schedule 7, TSUS. However, we do not think the articles in question here are of the type covered by this provision.

MAY BE RELEASED TO THE

B2

The fact that they are advertised as pet homes, or that they are characterized as household articles by the manufacturer, is not determinative for tariff classification purposes. But, having examined the submitted samples and considered all the facts presented, we conclude that these articles are not primarily carriers. The largest size, lacking handles, would be awkward to carry. The other sizes have their rather flimsy handles hooked onto the detachable lids, as indicated above, making them impractical as carriers. If the box were bumped or jostled while in transit, the lid could come off, particularly when the weight of the box was increased by that of water for fish, sand or gravel, and animals. While they lack features found in more expensive cages, such as attached feeding dishes, they provide visibility from all sides and are easy to wash. They lack features of carriers such as secure closings and covered sides that prevent animals from being frightened by strange surroundings during travel. They are too small to accommodate dogs or cats, the animals most likely to accompany owners on trips. They are most likely to be used in the home, and are properly classifiable as household articles of rubber or plastics under item 772.15, TSUS.

You should therefore allow this protest in full. A copy of this decision should be sent to the protestant along with your Form 19 Notice of Action.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

Dear Sir:

Re: Request for Further Review of Protest No. 3701-3-000054 of October 12, 1983

This protest, by Barnes, Richardson and Colburn, on behalf of Jak-Pak, Inc., concerns your classification of several articles, products of Hong Kong, under item 737.95, Tariff Schedules of the United States (TSUS), as other toys. The protestant claims that they are properly classified under various provisions that would allow duty free treatment under the Generalized System of Preferences (GSP). We are in agreement with your position on all articles covered by this protest.

The Skyhawk Parachutist, J.P. No. 0196, is a molded plastic 3-3/4 inch human figure to which is attached by strings a thin plastic parachute two feet in diameter. The article can be held by the top of the chute and dropped, allowing the chutist to float down. The protestant claims that it is properly classifiable as a toy figure of an animate object under item 737.40, TSUS, the parachute being simply a natural extension of the character. We agree that the article is a toy, being chiefly for amusement, and that the figure portion representing a person is "animate." However, the article is more than an animate figure, and cannot be classified as one. The figure has hooks on its shoulders for attachment of the parachute, which would be useless alone. We have frequently ruled that similar articles are more than toy figures of animate objects. In file 061365, of August 10, 1979, for example, bendable animals designed to fit onto detachable skateboards were excluded from the animate figures provision. We stated there:

> Articles of this nature which are figures of animate objects but which also incorporate toy features are more than toy figures of animate objects and as such are precluded from classification in item 737.40, TSUS. The toy skateboard and the animate figure are specially designed to be attached to each other and to be used in conjunction with each other.

Like the animals with skateboards, the parachutists and parachutes are classifiable as entireties under item 737.95, TSUS, a provision for other toys NSPF. A similar article, a parachutist with a parachute and a plastic reel with nylon string, was so classified in file 037377.

B4

RELEASED TO THE PUBLIC

The other articles covered by this protest are sets containing animal printing stamps and ink pads, J.P. Nos. 0046 and 0285. The protestant claims that they are properly classifiable under item 774.55, TSUS, as articles of rubber or plastics NSPF. However, these articles are clearly toys. They are not substantial and have little utilitarian value. Similar articles have been classified under item 737.95, TSUS, as other toys; see, for example, file 062385 of August 7, 1979. These sets are also properly classifiable under item 737.95, TSUS.

Therefore, you should deny this protest in full. A copy of this decision should be sent to the protestant together with your Form 19 Notice of Action.

Sincerely,

Arthur P. Scheffler

for Harvey B. Fox

Ms. Angela De Gaetano
Customs Information Exchange, Room 450
6 World Trade Center
New York, New York 10048-0945

Dear Ms. De Gaetano:

A Customs Form 6431 dated February 5, 1986, from the port of Los Angelos/Long Beach California, concerns entry No. 86-219565-8 dated November 23, 1985, covering a shipment of furniture parts from Taiwan to Royola Pacific Ltd.

The merchandise at issue is furniture with parts missing (e.g., rocker parts with a missing seat, table legs and top with a missing center column, chair parts with a missing seat). The issue presented is whether the parts are classified as parts of furniture in item 727.40, Tariff Schedules of the United States (TSUS), or as substantially complete furniture in items 727.29, TSUS, and 727.35, TSUS.

One port believes that the items are substantially complete furniture and should be classified as such in item 727.29, TSUS, and 727.35, TSUS. He cites General Headnote 10(h), TSUS, Internal Advice 55/85, and Daisy Heddon, Div. Victor Comptometer Corp. v. United States, 66 CCPA 97, C.A.D. 1228 (1979) in support of his position.

The other port maintains that, inasmuch as each item is missing an integral component, the merchandise should be classified as parts of furniture in item 727.40, TSUS. He cites Customs Headquarters Ruling Letter (HRL) 025691, Treasury Decision 66/56(19), and HRL 073738, dated March 29, 1984, in support of his position.

Headnote 10(h), TSUS, states that "unless the context requires otherwise, a tariff description for an article covers such article, whether assembled or not assembled, and whether finished or not finished." Parts of an article, when assembled, must result in a substantially complete article in order for them to be classified as the unfinished article.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B6

Each item mentioned lacks an integral component, therefore following HRL 073738, HRL 025691 and T.D. 66/56(19) the instant merchandise cannot be classified as unfinished furniture. Instead, the instant articles are classified as parts of furniture in item 727.40, TSUS.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

07 NOV 1986

Mr. Paul S. Anderson, Esquire
Sonnenberg, Anderson & O'Donnell
One North LaSalle Street, Suite 3015
Chicago, Illinois 60602

Dear Mr. Anderson:

In your letters of September 25, 1986, and March 14, 1986, you requested a tariff classification for man-made fiber cordage from South Korea for your client Attwood Corporation of Lowell, Michigan. You submitted a sample of the final anchor kit product along with your second letter.

The instant merchandise consists of 100 foot, 150 foot, or 200 foot long twisted 3/8 inch or 1/2 inch nylon rope with an eye splice and a galvanized iron "thimble" attached to one end. The "thimble" is a small piece of metal placed inside the eye splice, presumably to protect the eye splice from wear. After importation these anchor ropes are packaged with the anchor chain and anchor and are sold as anchor kits.

You argue that the instant nylon rope with eye splice and "thimble" should be classified under the provision for yachts and pleasure boats, parts, in item 696.15, Tariff Schedules of the United States (TSUS), because the rope will be sold and used exclusively with the anchor kits. You cite Customs Headquarters Ruling Letter (HRL) 052298 of April 6, 1978, in support of your position. You submit five affidavits stating that the rope in the anchor kits is used in the lengths in which they are purchased and is not used for any other purpose than in connection with the anchor kits.

Despite your arguments, the instant rope cannot be classified as parts of boats because it has not been established that this merchandise belongs to a class or kind chiefly used as an anchor rope. But even if this could be established, we are not convinced that anchor ropes are parts of boats. We cannot find a precedent for rope with a loop and a "thimble" being classified as parts of boats.

HRL 052298 of April 6, 1978, classified man-made fiber cordage with eye splices on one or both ends under the provision for articles, not ornamented, of man-made fibers, other, other, in item 389.62, TSUS.

HRL 052298 has been superceded by HRL 077530 of January 7, 1986, however, which classified ropes with eye splices attached to their ends under the provisions for cordage. As HRL 077530 observed:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B8

> The splicing of eyes to the ends of ropes imported in sizable continuous lengths does not necessarily preclude those ropes from classification under the cordage provisions of the tariff schedules. See ORR Ruling 73-0278. In that ruling, it was held that manila rope hanks, each with a spliced-eye end and cut in 50- and 100-foot lengths were classifiable as cordage rather than as articles of textile materials, not specially provided for.
>
> The addition of eye splices to long lengths of cordage does not dedicate those lengths to a sole specific use as towing ropes or barge lines. The character of these articles is not fixed with certainty by the mere addition of eye splices. When long lengths of cordage are imported in a condition where dedication to other uses is probable, the addition of the eye splice is a de minimus act which cannot serve to make them articles rather than cordage.

We find that the mere addition of an eye splice and a "thimble" to the instant rope cannot serve to make it an article rather than cordage.

You argue, however, that HRL 077530 dealt with merchandise of much greater length (i.e., 200 through 720 feet) than the instant merchandise, which is in lengths of 100 to 200 feet. HRL 077530 did deal with longer rope, but ORR Ruling 73-0278 dealt with manila rope cut in 50 and 100 foot lengths and with eye splices. ORR Ruling 73-0278 found that such rope was classified as cordage rather than as articles.

According to component of chief value breakdowns which you submitted, the instant merchandise is in chief value of the nylon rope (i.e., man-made fibers). The metal "thimble" fitting is classified as an entirety with the cordage. The instant rope, with eye splice and "thimble", is classified under the provision for man-made fiber cordage, measuring 3/16 inch or over in diameter, in item 316.5800, TSUS, dutiable at 15 percent ad valorem plus 12.5 cents per pound.

This merchandise falls within textile category designation 605. As a product of South Korea, this merchandise is subject to quota restraints based upon international textile trade agreements.

The Harmonized Commodity Description and Coding System (HS) is scheduled to replace the TSUS as the tariff code of the United States on January 1, 1988. For your information, the HS provision applicable to the above-described merchandise appears to

078385

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B9

be Subheading 5607.50.40, rope of other synthetic fibers, other. This information is intended to assist you in becoming familiar with HS tariff classifications. It is not an official Customs Service ruling and may not be challenged by you at this time. It is anticipated that we will begin issuing HS tariff classification rulings on or about July 1, 1987. (Public notice will be given of the exact date such rulings will begin.) If you wish a HS tariff classification ruling, you may request one at that time.

Sincerely,

For Harvey B. Fox
Director, Classification and
Value Division

078390 DW

Mr. Leon P. Caguioa, Jr.
Le Arc Manufacturing Corp.
Km. 23, Bo. Tuclas, Cupang, Muntinlupa
Metro Manila, Philippines

Dear Mr. Caguioa:

You have requested the tariff classification of a textile article described as a "medallion".

The submitted sample consists of a "V"-shaped design made from a sheer woven fabric of man-made fibers. It measures approximately 8 inches long and gradually reaches 2 1/2 inches at its widest point. The fabric contains an embroidered design and additional stitching along the bottom edge. The item is considered to be ornamented for tariff purposes.

The issue here is whether the item is classifiable as an ornamented motif in item 353.50, Tariff Schedules of the United States (TSUS). Headnote 2(a), Subpart B, Part 4, TSUS, provides that the term "motifs" embraces individual textile pieces designed and almost wholly used for incorporation in, or appliqueing on wearing apparel, furnishings, and other textile articles.

We regard the item as an applique rather than as an inserting. This view is supported by an article appearing in April 1986, in Body Fashions/Intimate Apparel that described similar items as appliques that will be used for daywear, sleepwear, and foundation garments. Having both examined this item and read the magazine article, it is our decision that the applique is "designed and almost wholly used for ... appliqueing on wearing apparel ...."

The item is classifiable as an ornamented motif in item 353.50, TSUS. Products classifiable under this tariff provision may be subject to quantitative restrictions under category 627.

Sincerely,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Steven P. Kersner, Esq.
Brownstein, Zeidman and Schomer
Suite 900
1401 New York Avenue, N.W.
Washington, D.C. 20005-2102

Dear Mr. Kersner:

On behalf of Inner Secrets, Inc., you have requested a tariff classification ruling for a women's garment to be imported from Hong Kong. In addition to making a written submission, you met with Customs staff on August 18, 1986.

The submitted sample is a 2 x 2 rib knit sleeveless turtleneck body suit composed of 65 percent polyester and 35 percent cotton. It has three plastic snaps at the crotch opening and a decorative trim around the leg openings, the latter serving to finish the raw edge of the fabric.

You suggest that this article is classifiable under item 378.05, Tariff Schedules of the United States (TSUS), a provision for ornamented underwear. However, the garment is neither ornamented nor underwear.

Headnote 1 of Subpart 6E, TSUS, provides for the classification in that subpart of underwear not specially provided for. In determining what constitutes underwear, Customs has maintained that the term refers to garments worn under other garments and not exposed to view when the wearer is conventionally dressed for appearance in public, indoors or out of doors. This view is consistent with the court's holding in Children's Hose, Inc. v. United States, 55 Cust. Ct. 6, C.D. 2547 (1965), that garments such as leotards and tights, partially covered and partially exposed during normal wear, could not be classified as underwear.

It is evident that portions of this turtleneck garment will be visible during normal wear, such as with slacks, shorts, a skirt, or a jumpsuit. The presence of a snap closure in the crotch does not make the garment underwear; in fact, such a snap closing could be uncomfortable if worn against the skin. Further, the fact that a garment is worn against the skin does not make it classifiable as underwear;

B12

both diapers and swimsuits are so worn, but are not underwear. This garment could easily be worn over underwear; many brassieres have strap configurations that would accommodate the back cut-outs.

This article is of the type that we have frequently classified as body suits. Body suits, by their structure and appearance, are capable of being worn as outerwear. They are one-piece garments similar to leotards, covering the torso, having leg openings, and designed to be form-fitting. See, for example, file 073980 of April 23, 1985. This garment is thus provided for under item 384.8022, Tariff Schedules of the United States Annotated, quota category 659, as other women's wearing apparel, not ornamented, of man-made fibers, knit, blouses, . . . body suits.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Fred B. Hunt
President
Fairfield Line Inc.
P.O. Box 500
Fairfield, Iowa 52556

Dear Mr. Hunt:

In a letter dated May 27, 1986, you inquired as to the tariff classification of certain gloves manufactured in Korea. Two samples were submitted for examination.

The sample designated as Style 587 is a ladies' glove with a woven shell of man-made fibers which is described in the catalog as "taslon." This glove has a fiberfill lining with an additional layer of thinsulate on the back of the hand extending from the fingertips to the cuff. This style also has an additional layer of foam padding with a thin layer of vinyl reinforcement across the back of the knuckles. Additional features are a Goretex insert (interliner), pigskin leather palm and thumb reinforcement extending onto the first two fingers of the hand, an elasticized wrist on the palm side further secured by a velcro strap across the back of the hand, an applied ribbed knit cuff, and a hook and clasp.

The sample designated as style 378 is a juvenile's size glove with a taslon shell, fiberfill lining, additional layer of thinsulate on the back of the hand extending from the fingertips to the cuff, additional foam padding across the back of the knuckles, pigskin leather palm and thumb reinforcement extending onto the first two fingers of the hand, an elasticized wrist on the palm side, and a hook and clasp. On the back of the hand, a 2-1/2 inch long zipper secures a closed vent.

It is your position that these gloves are properly classifiable under the provision for other ski equipment in item 735.06, Tariff Schedules of the United States (TSUS). In support of your position you have submitted an affidavit stating that the gloves are designed for use in the sport of skiing.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B14

In the case of Stonewall Trading Co. v. United States, 64 Cust. Ct. 482, C.D. 4023 (1970), the court ruled that certain vinyl gloves were properly classifiable under the provision for other ski equipment in item 734.97, TSUS, currently item 735.06, TSUS. These gloves were found to possess the following characteristics:

(1) A hook and clasp to hold the gloves together;

(2) an extra piece of vinyl stitched along the thumb portion to meet the stress cause by the flexing of the knuckles when the skier grasps the ski poles;

(3) an extra piece of red colored vinyl with padding reinforcement and inside stitching, which is securely stitched across the middle of the glove where the knuckles bend and cause stress; and

(4) cuffs with an elastic gauntlet to hold the glove firmly around the wrist, so as to be waterproof, and to keep it securely on the wrist.

Styles 587 and 378 appear to possess all the features which would qualify them as ski equipment. However, we note that the palm, thumb, and finger reinforcements are made of pigskin. This characteristic would show that the gloves are not specially designed for use in the sport of skiing inasmuch as leather manufacturers generally recommend that pigskin not be allowed to get wet lest it be ruined. Also, the pigskin is not waterproof.

In view of the foregoing we cannot accept your affidavit stating that the gloves have been designed for use in the sport of snow skiing. However, we would consider as acceptable evidence an affidavit submitted by a manufactuer of pigskin positively stating that pigskin leather possesses characteristics that enable it to stand up to repeated wettings and wear from the action of the skier grasping ski poles in a snowy environment. The statement should be from a firm that has been in business long enough to have received product complaints. The firm should also be familiar with the demands of alpine skiing.

Another reason why the gloves in issue do not show a special design for use in the sport of skiing is that they lack an additional piece of vinyl reinforcement securely stitched across the middle where the knuckles bend and cause stress as described in Stonewall Trading Co., supra. Although you maintain that this court decision is out of date, you do not

078415

C1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

elaborate on this point to explain current design. Furthermore, this office issued a ruling on September 9, 1981 (IA 138/80 file No. 068362), holding that reinforcement continued to be necessary on textile gloves and that leather or vinyl was necessary as the reinforcing material. This ruling recognized that ski gloves were no longer made exclusively of leather and vinyl but took into consideration that a change in shell material could only be recognized if the accumulation of features showed design for use in the sport.

It should be noted that in the case of Stonewall Trading Co., supra, the court specifically stated that a better quality glove would not necessarily show design for use in the sport. Admittedly, your gloves are clearly superior to the mittens in Stonewall. However, you have failed to explain how these gloves show design for use in the sport of alpine skiing. This failure is particularly significant with respect to ski gloves because they so closely resemble another recognized category of glove, namely, winter gloves worn for warmth. Unlike baseball gloves and mitts which are so specially constructed that they bear no resemblance to any other known gloves, ski gloves are very similar to winter gloves worn for warmth because ski gloves must, of necessity, also provide warmth. Therefore, ski gloves must have some features that show design for use in the sport in addition to those features which merely relate to the warmth provided by the glove.

In view of the foregoing, we conclude that the sample gloves do not qualify for classification under item 735.06, TSUS, as other ski equipment. It is our opinion that style 378 is classifiable under the provision for gloves and glove linings, of man-made fibers: not knit in item 704.90, TSUS, and dutiable at the rate of 14 cents per pound plus 15.7 percent ad valorem. Inasmuch as style 587 has a Goretex logo on the velcro strap and label, it is considered ornamented. Therefore, it is classifiable under the provision for ornamented gloves of man-made fibers in item 704.32, TSUS, and dutiable at the rate of 21.7 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

818176

078418

Mr. Donald M. Wood
President
Dynatoy International, Inc.
3594 West 1820 South
Salt Lake City, Utah 84104

Dear Mr. Wood:

You have requested reconsideration of New York ruling 818176 of April 23, 1986, in which a children's article known as a "Power Shirt" was determined to be classifiable as wearing apparel. You believe that it should be classified as a toy. For the reasons stated below, we are in agreement with your position.

A "medium" sample of the article, which is available in three boys' sizes, was submitted in a retail box with advertising literature. The Power Shirt is made of a 65 percent polyester-35 percent cotton flesh-colored fabric and polyurethane foam padding, with rib-knit cuffs, waist, and neck. Foam padding is inserted between layers of fabric in the front and sleeves and is stitched in place in such a way as to give the visual impression of large muscles. Illustrations on the box show a small bespectacled boy wearing the Power Shirt and vanquishing monsters. The child is challenged to "[d]efend the galaxy, the country, or your own backyard with the help of your dreams and Power Shirt! You are the ultimate force for good in the universe--and Power Shirt makes it happen." A large poster that accompanies the package invites the child to sign at the bottom, promising to use his power to promote goodness and right. "Power Shirt," states the advertising, "lets a kid run with his imagination."

Headnote 1 of Subpart E, Part 5, Schedule 7, Tariff Schedules of the United States (TSUS), provides: "The articles described in the provisions of this subpart . . . shall be classified in such provisions, whether or not such articles are more specifically provided for elsewhere in the tariff schedules." This subpart includes the provisions for toys, defined in Headnote 2 as "any article chiefly used for the amusement of children . . . ."

C3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

There is no question that the chief use to which this article will be put is the amusement of children. The age group for which the submitted sample is advertised is that of boys between six and eight. A six-year-old boy loves to tear around and engages in almost constant activity. His many fears include witches and ghosts, and he has a quick capacity to pretend. "Shooting the enemy" and "getting under cover" are characteristic. Action is also a key feature of the play of eight-year-olds; wild running and combat games are favorites. They like to dramatize, impersonating book or movie characters, and love extreme action and gore. See Gesell, Ilg, and Ames, The Child from Five to Ten (rev. ed., 1977). The sturdily constructed Power Shirt would fit in well as a prop for such imaginative, active play. Because of its hot and bulky padding and bizarre appearance, it is not likely to be purchased by someone looking for a shirt, i.e., an article of apparel to be worn for reasons of decency or comfort. Rather, it would be purchased and used for amusement in any of the available sizes, and any functional uses it might have would be subordinate to its play value. Therefore, according to Headnote 1 of Subpart 5E of Schedule 7, above, it must be classified as a toy. Our appellate court has held, in interpreting the toy provisions, that the fact that an article is worn does not prevent it from being considered a toy for tariff purposes if its chief use is to provide amusement.

> The court thus stressed the quality of mind or emotion induced by the object as controlling, and we think that is the best approach to interpreting the TSUS definition. If the purpose of an object is to give the same kind of enjoyment as playthings give, its purpose is amusement, whether the object is to be manipulated, used in a game, or, as here, worn.

United States v. Topps Chewing Gum, 58 CCPA 157, C.A.D. 1022, 440 F.2d 1384 (1971).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C4

078418

This article is classifiable under item 737.95, TSUS, as other toys. Ruling 818176 is hereby revoked, pursuant to 19 CFR 177.9(d).

Ms. Eileen T. Romito
Department 733X, BSC 19-45
Sears, Roebuck and Company
Sears Tower
Chicago, Illinois 60684

Dear Ms. Romito:

In your letter of June 3, 1986, you requested a reconsideration of New York letter 817733 of April 23, 1986. You submitted a sample of the men's knit shirt from Hong kong which was the subject of New York letter 817733 along with your letter.

The sample, Stock Number 77176, is a men's 65 percent polyester, 35 percent cotton finely knit pullover shirt. The shirt was classified under the provision for other men's or boy's wearing apparel, ornamented, of man-made fibers, knit, shirts, other, in item 381.2430, Tariff Schedules of the United States (TSUS). This classification was based on the determination that the light grey overlock stitching on the center seam and on the armhole seams was more decorative than functional and that the overlock stitching constituted ornamentation for tariff purposes.

An examination of the garment shows that all the seams are sewn on the inside of the garment with a merrow stitch using a dark grey colored thread. This stitch securely joins the separate sections of fabric. In addition to this stitching, as noted above, the center front seam and the armhole seams are sewn on the outside of the fabric with an overlock stitch using a light grey colored thread. This light grey thread is a sufficient contrast to the darker grey fabric to be readily visible on the garment (and to provide a decorative effect).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C6

You believe that the overlock stitching reinforces the seams, but reinforcement is unnecessary in either area. The center front seam is not an area of stress, so additional reinforcement to that seam is unnecessary. The armhole seams are sufficiently secure against the stress of normal movement without the additional overlock stitching. We note that the armholes are also cut large, thereby reducing the normal stress of wear.

In Blairmoor Knitwear Corp. v. United States, 60 Cust. Ct. 338, C.D. 3396 (1968), the court held that a feature which is more decorative than functional ornaments a garment for tariff purposes. Following this reasoning, the overlock stitching on the armhole seams and on the center front seam is primarily a decorative feature, with little functionality. The overlock stitching constitutes ornamentation within the meaning of Headnote 3(a)(i)(B) of Schedule 3, TSUS.

We hereby reaffirm New York letter 817733. The shirt is ornamented, and it is classified in item 381.2430, TSUS, dutiable at the rate of 36.3 percent *ad valorem*.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. H. K. W. Ho
Second Secretary
British Embassy
Hong Kong Office
Hong Kong Commercial Affairs
3100 Massachusetts Avenue, N.W.
Washington, D.C. 20008

Dear Ms. Ho:

You have inquired as to the correct classification of an article of apparel the product of Hong Kong, described as a "skant" or "scant."

The garment is made of a 100 percent cotton knit fabric. It consists of a pair of long pants legs with an elasticized waistband, and rectangular panels hanging from the waist over the front and the back, respectively. The two panels are stitched together from the waist to the hip, but hang open from the hip to the ankle area. A colored design is printed over the center of each panel. The pants legs are visible below the bottom edges of the panels. A rectangular fabric label bearing the name of the importer, "jag," is stitched to the lower left corner of the front panel. The stylization and variegated colors of the letters give the label a decorative effect, and thus it ornaments the garment.

With its visible pants legs and panels open at the sides, the garment cannot be said to maintain the appearance of a skirt, and so cannot be classified as a skirt. Nor can it properly be described as trousers or slacks ornamented by overhanging panels. Rather, it is a unique garment. It is properly classifiable under item 384.0497, Tariff Schedules of

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Miss H.K.W. Ho
British Embassy
Hong Kong Office
3100 Massachusetts Avenue, N.W.
Washington, D.C. 20008

Dear Miss Ho:

Re: Your Ref. HK 9/86

This is in response to your letters March 20, 21, and April 15, 1986, concerning several shipments of 100 percent cotton knitted tops that were detained at the port of San Francisco, California for lack of an export license for category 339.

It is our view that the garment in question is neither a blouse nor a tank top, because it does not extend to the waist or provide full coverage to the wearer's body. Thus it is classifiable as a top in item 384.3438, Tariff Schedules of the United States Annotated, and requires an export license from Hong Kong for category 339.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Washington, D.C. 20008

Dear Miss Ho:

Re: Your Reference No. 4/86

Your letter dated June 10, 1986, requested the tariff classification of certain garments that have been examined by the Hong Kong Trade Department which is of the opinion that they are classifiable as sleepwear.

Except for style 8620 which we consider to be nightwear and classifiable in item 384.3420, Tariff Schedules of the United States Annotated (TSUSA), under category 351, it is our view that the remaining garments belong to a class or kind of merchandise which have multiple uses. Therefore, they are not classifiable as nightwear. The following list represents the appropriate classification for these garments:

Styles:

8508	8158	8350 - Top piece		Item 384.2950, TSUSA
8429	8308			Category 339
8402	8422	8421	8447	Item 384.3210, TSUSA
8420	8140	8406	8151	Category 336
8448	8426	8427	8408	
8350 - Bottom Piece				Item 384.3124, TSUSA
				Category 348
8623	8611			Item 384.4609, TSUSA
8610	8621			Category 341
8717 - Top				Item 384.5299, TSUSA
				Category 359

San Francisco, California 94126

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 2809-5-000692

The above-captioned protest and application for further review were filed against the tariff classification of certain laser surgical apparatus which was the subject of several entries filed in 1983 and 1984 at the port of San Francisco. This merchandie is a product of Japan. Our decision follows:

ISSUE:

All of the merchandise was classified by Customs officers under the provision for optical measuring, checking, analyzing or automatically-controlling instruments and apparatus and parts in item 712.05, Tariff Schedules of the United States (TSUS). The column 1 rates of duty required under that provision in 1983 and 1984 were 17.5 and 15.6 percent ad valorem respectively. It is claimed the merchandise exclusive of certain modules is classifiable under the provision for electro-surgical apparatus in item 709.15, TSUS. The column 1 rates of duty required under that provision in 1983 and 1984 were 13 and 11.7 percent ad valorem respectively. It is claimed the excluded modules are classifiable under the provision for control panels in item 685.90, TSUS. The column 1 rate of duty required under that provision in 1984 was 6.5 percent ad valorem.

C13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

FACTS:

The merchandise consists of the Model 60Z surgical laser system consisting of a CO_2 laser generator, handpieces and manipulators, articulated arms and self-testing and monitoring modules for use with that system. Also included are self-testing and monitoring modules and articulated arms claimed to be for use with the Model 30Z laser system. The entries further included pressure regulators with alarms for use with the surgical lasers. The submitted record does not show how the merchandise was allocated among the several entries involved for the purpose of resolving entireties issues.

LAW AND ANALYSIS:

The instant surgical laser apparatus does not incorporate optics for an integrated viewing system and, therefore, must be distinguished from the apparatus which was the subject of the decision in our PRD of September 9, 1985, file No. 075837. Laser surgical apparatus, such as a CO_2 laser which essentially involves invisible light, when lacking integrated optical viewing components does not qualify for classification as optical apparatus on the basis of the laser optics by themselves. In that configuration, the merchandise does not qualify under the so-called fourth Engis requirement for a picture or image or the enhancement of vision. See Engis Equipment Company v. United States, 62 Cust. Ct. 29, C.D. 3670 (1969); EAC Engineering v. United States, 623 F. Supp. 1255 (CIT 1985).

078462

C14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Under the rule in General Headnote 10(ij), TSUS, a parts provision cannot prevail when in competition with a specific provision for the part. Item 685.90 is a specific provision for the purposes of the headnote rule. J.E. Bernard & Co. v. United States, 59 Cust. Ct. 31, C.D. 3060 (1967). We have further followed that principle in regard to control modules used in medical applications. See our decision in IA 29/85 dated November 29, 1985, file No. 076339. However, the cited headnote rule is not for application when a control module is imported as an entirety with the controlled apparatus. In that context, a provision for apparatus includes the complete aggregation of all components needed to achieve the required function. ITT Thompson Industries, Inc. v. United States, 3 CIT 36 (1982).

HOLDING:

The surgical laser at issue and the parts for it, with the following exception, are properly classifiable under the provision for electro-surgical apparatus and parts in item 709.15, TSUS. Every self-testing and monitoring module shown to have been included in the same entry for which there is a corresponding piece of the basic laser generating equipment will be similarly classified as an entirety with such equipment. No distinctions will be made between self-testing and monitoring modules stated to be for the Model 60Z apparatus and those stated to be for the Model 30Z apparatus since the

078462

D1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

record is entirely lacking in any evidence that these modules are not interchangeable. However, any such module which otherwise is not shown to be an entirety with a piece of basic laser generating equipment in the same entry is separately classifiable under the provision for control panels in item 685.90, TSUS.

Therefore, the protest should be denied except to the extent reclassifications in accordance with the above otherwise will result in a full or partial allowance. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-5-016135, on the Classification of Bobbins of Stripped Tobacco Imported from Holland

The merchandise in question is manufactured from natural wrapper tobacco leaves. The leaves are subjected to a die-cutting operation to produce a particular shape (cut to pattern) that does not have stems or any discolored or otherwise undesirable portion of the leaves. The number of die-cuts per leaf will depend on the size of the leaf, the usable portion of the leaf, and the particular pattern involved. The die-cuts are placed on cloth strips which are then wound around a core or bobbin for use in the automated production of cigars.

In behalf of the protestant it is urged that the merchandise be classified under the provision for tobacco, manufactured or not manufactured, not specially provided for in item 170.80, TSUS.

Customs, relying on Headquarters letter 060650, classified the merchandise under the provision for stemmed wrapper tobacco in item 170.15, TSUS.

Headnote 1, Part 13, Schedule 1, TSUS, defines the term "wrapper tobacco," as that quality of leaf tobacco which has the requisite color, texture and burn, and is of sufficient size for cigar wrappers.

It is claimed that this definition refers to "leaf tobacco," tobacco in its natural form, except where the midrib or stem has been removed. This interpretation is supported, it is claimed, by Headnote 2 which refers to wrapper quantity in terms of the total number of leaves. It is claimed further that the precedent relied on which considered a similar type of tobacco (060650, dated August 30, 1979) relied on the similitude provision, item 798.00, TSUS, to reach the decision.

D3

Regardless of any earlier decisions and the supposed rationale therefor, we take the position that the merchandise under consideration is covered by the headnote definition of wrapper tobacco. We see no reason why the die cutting of the leaf should take the leaf out of that provision which is clearly intended to cover the product.

The cigar leaf is not radically treated. It is merely die-cut. What is different is the manner in which the leaf is utilized in the production of the cigar. It is placed on a bobbin and the bobbin is placed in the automated cigar making machine, and through the operation of the machine the die-cut tobacco is wrapped around the cigar. Thus, it is not the cigar wrapper which has been advanced to a new product but the method of production has been radically changed. The cigar leaf has not been advanced in condition or value to a new or manufactured state but remains stemmed wrapper tobacco.

Thus, the protest as to the classification of the stemmed wrapper tobacco is denied.

The protest also raised a question as to the dutiable weight of the tobacco. We agree with the conclusion of the District Director that the dutiable weight is 106 pounds and that portion of the protest should be allowed.

That portion of the original protest file submitted is hereby returned.

A copy of the decision should be furnished to the protestant along with the Form 19 Notice of Action.

Sincerely,

for Harvey B. Fox
Director, Classification
and Value Division

Harold I. Loring, Esq.
Grunfeld, Desiderio, Lebowitz & Silverman
Two World Trade Center
Suite 2238
New York, New York 10048-0654

Dear Mr. Loring:

On behalf of Ruby International, Inc., you have requested a tariff classification ruling for styles 607, 609 and 611 men's boxer shorts. The style number will depend on the print in the fabric. The country of origin is not stated.

The submitted sample is made of a 100 percent cotton woven printed fabric. The fabric is unusual for men's underwear in that it shows cartoon drawings of monkeys eating bananas, and palm trees. Further, the garment is constructed with the print upside down. Each front panel wraps around the side and meets the single center back panel. The shorts have an elastic waistband. Two buttonholes are worked through all thicknesses of the left front fly opening, one at the waist and the other half way down the fly. There is no zipper or other closure aside from the two buttons.

Lacking a zipper or other closure, these shorts are not likely to be worn except under another garment and in such a manner that they would not be visible during ordinary wear. Thus they are classifiable under item 378.2011 or item 378.2510, Tariff Schedules of the United States Annotated, quota category 352, as other men's underwear, not ornamented, not knit, of cotton, according to whether or not they are valued over 75 cents per separate piece.

Sincerely,

Harvey B. Fox

078483

District Director of Customs
555 Battery Street
P.O. Box 2450
San Francisco, California 94126

Dear Sir:

You have asked how three articles of printed matter, all stated to be written by Jim Maynard and published by Quicksilver Productions of Ashland, Oregon, would be classified for customs purposes and whether they would be subject to the restrictions of the manufacturing clause of the copyright law. The samples are returned to you herewith.

Celestial Influences 1986: An Almanac and Textbook of Astrology, Ephemeris, and Calendar, consists of twelve sheets of paper, each approximately 11 inches by 17 inches, printed on both sides, laid on a heavier paper cover of the same size, printed in color on the outside, all fastened at the center by three wire staples. When the cover and inside pages are folded in half, the article is closed. The inside front cover is printed with a chart; the inside back cover, with advertising. Holes punched in the outer edges of the pages would allow the article to be hung up on a wall. A table of contents on page one lists information concerning the use of the calendar, the appearance of Halley's comet, the signs of the zodiac, planting by the moon, and related subjects, and a month-by-month calendar, which takes up fewer than half of the 50 pages.

We have not ruled on whether such an article, which includes a calendar but also many pages which are not calendar, is still classifiable as a calendar. There are no court cases directly on point. We note, however, that in Brooks Bros. v. United States, 68 Cust. Ct. 91, C.D. 4342 (1972), the court determined that an article was properly classified as a diary (a blank book), and was not printed matter (a book of facts), as the importer contended. Examination of the article revealed that, while it contained a number of pages of text and maps, it contained more blank pages for recording events and appointments. Twenty-four of the fifty pages of the Celestial Influences 1986 are taken up by the calendar; thus, while approximately half of it consists of a calendar, just over half consists of text, maps, or charts.

D6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

This article fits the definition of a pamphlet set out in ORR Ruling 102-71 of April 15, 1971, as it consists of more than two separate sheets of printed matter stapled together in book form, the pages opening like a book and following each other in a regular sequence. By Headnote 2(b) of Part 5, Schedule 2, Tariff Schedules of the United States (TSUS), it would therefore be classifiable as a book. Celestial Influences 1986 would thus be covered by item 270.25, TSUS, a provision for books not specially provided for. The Pocket Astrologer 1986, a similar 65-page article in a smaller size -- approximately 5-1/2 by 8-1/2 inches when opened out flat -- but lacking the holes, is also so classified.

The third sample, entitled Celestial Guide 1986: An Astrological Week-at-a-Glance Engagement Calendar, is a paper-bound book of 160 pages. It contains some charts and a small amount of textual material, but over 100 pages are devoted to the 1986 calendar, with each week spread over two pages. Space is allowed for making notes under each day's date; the calendar for the entire month is printed at the top of every two pages. It is classifiable under item 274.10, TSUS, as a calendar of paper, printed in whole or in part by a lithographic process, not over 0.020 inch in thickness. Since this article is a bound book, it is not considered to consist of permanently mounted lithographs within the meaning of Headnote 3 of Part 5, Schedule 2, TSUS. The thickness to be measured is thus that of the thinnest paper in the book.

The manufacturing clause of the copyright law expired on July 1, 1986. Therefore, Customs no longer requires English-language non-dramatic literary works by authors living in the United States and bearing a notice of copyright to be printed in the United States or Canada. See telex of July 2, 1986, copy enclosed.

Sincerely,

Arthur P Schaffner

FROM : Director, Classification & Value Division

SUBJECT: Internal Advice Request No. 5/86 Concerning the Proper Classification of Cambozola Cheese, A Soft Cheese With Blue Mold

This request for Internal Advice was initiated by a letter from Ms. Marsha A. Echols, 3213 O Street N.W., Washington, D.C. 20007, on behalf of her client, Champignon North America, Inc.

FACTS:

The cheese at issue is Cambozola, a soft ripened cheese with blue mold. It is manufactured by Kaserei Champignon Hofmeister K.G. in Bavaria, West Germany.

Cambozola is a mild, triple cream, soft ripened cheese. It has a prominent crust formed on the exterior surface as a result of curing or ripening. It cures or ripens from the surface toward the center. Cambozola has a fat content by weight (on a moisture free basis) of not less than 50 percent. The product has a moisture content (calculated by the weight of the non-fatty matter) of not less than 65 percent. The body of Cambozola is soft, creamy and pasty. Its taste is mild, and its aroma is subdued.

During the manufacturing process, mold spores of penicillium roqueforti and penicillium camemberti are added to the curd. When the penicillium roqueforti oxidizes, a mold results. The growth of the blue mold is limited

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D8

by the white mold and by the softness of the brie. As a result, the blue mold in Cambozola appears as spots in the cheese. The blue mold begins as a few spots in the young cheese and increases to many spots throughout an older ripening cheese.

The inquirer claims that Cambozola has been misclassified. She maintains that it is classifiable under the provision for other cheeses, and substitutes for cheese, other, valued over 25 cents per pound, other, other, in item 117.8875, Tariff Schedules of the United States (TSUS).

The import specialist believes that Cambozola is properly classified under the provision for blue mold cheese, in original loaves, in item 117.0010, TSUS. As such, it is also provided for in item 950.07, TSUS, which covers blue mold cheese (except Stilton produced in the United Kingdom) and cheese and substitutes for cheese containing, or processed from, blue-mold cheese (provided for in items 117.00, 117.05, 117.75 or 117.88).

078488

ISSUE:

Is Cambozola correctly classified as a blue mold cheese in items 117.00 and 950.07, TSUS, or as other cheese, in item 117.88, TSUS?

LAW AND ANALYSIS:

The inquirer claims that Cambozola is a soft ripened cheese which meets the requirements of Headnote 3(a)(iv), Part 3 of the Appendix, TSUS, and which is therefore exclued from quota and import license requirements. She argues that Cambozola meets the curing process and fat/moisture content requirements of Headnote 3(a)(iv), supra. She contends that Customs has incorrectly taken the position that Cambozola has mold distributed throughout its interior (which would exclude Cambozola from the requirements of Headnote 3(a)(iv), supra).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D9

She argues that Cambozola is a new product which is classifiable as a soft ripened cheese because it possesses an essential resemblance to soft ripened cheeses and because its essential character is that of a soft ripened cheese, not a blue cheese. She claims that Headnote 3(a)(iv), supra, which excludes cheese with mold distributed throughout its interior does not exclude Cambozola because the blue mold does not occur throughout the cheese's interior. She argues that Cambozola is not a blue cheese because it is not blue veined.

Blue mold cheeses have traditionally been made in the form of semi-soft cheeses, such as Stilton, Roquefort and Gorgonzola, whose physical structures permit the growth and development of the blue-mold cultures in a typical veining or branching pattern. The relatively recent growth in popularity of the soft paste, mold ripened cheeses such as Camembert or Brie has led to the development of a new type of soft, blue mold cheese (e.g., Saga, Lymeswold and Bavariablu). In these latter cheeses, which have pasty, close-textured bodies, the growth and development of the blue mold cultures often tend to a spherical (rather than a veining) pattern of mold in the cheese. Whether soft or semi-soft, however, these blue mold cheeses share one common characteristic—they all contain blue mold cultures.

According to Frank Kosikowski's Cheese and Fermented Milk Foods (Edwards Bros., Inc., Ann Arbor, Michigan, 2nd Ed., 1977), "Like other cheeses of its type, Blue is produced by introducing the mold spores of P. roqueforti or P. glaucum into the milk or curds before pressing. Air passages are then bored into the heavily salted cheese. The air induces the mold spores to grow vegetatively with a resulting spread of their greenish blue mycelia. The penicillia molds are rich in proteolytic and lipolytic enzymes, and during

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D10

0788488

the resulting ripening or curing these enzymes are released. Their activities lead to free enzymes, amino acids, carbonyls and fatty acids which ultimately effect the flavor and texture." Based on the foregoing, the blue mold cultures are introduced into the production of the Cambozola either in the cheese vat or when the cheese curd is poured into the cheese mold, so that the mold cultures have already been distributed throughout the curd before pressing.

Three photographs attached to the file show the actual distribution of the blue mold throughout the cheese body when the Cambozola is not fully ripened, fully ripened and somewhat past fully ripened. The photograph of Cambozola at the end of Exhibit 3 in the inquirer's submission also shows the distribution of the blue mold throughout the cheese body. In each photograph, the distribution of the blue mold cultures throughout the cheese is readily apparent. Customs Laboratory Report Number 2-86-10211-001, dated November 12, 1985, also states that "Blue mold was found throughout the sample." (The sample was a Cambozola cheese submitted to our New York office along with the request for internal advice.)

The blue mold cultures in the soft cheeses grow as the cheeses ripen. Whether more cultures are mixed with the curd for stronger blue mold development (as the inquirer claims is the case with Bavariablu) or fewer cultures are mixed with the curd for a milder, slower developing blue flavor (as is claimed in the case of Cambozola), the product is essentially the same. It is the presence and the flavor, whether mild or strong, of the blue mold which distinguishes these cheeses from other mold-ripened varieties such as Camembert and Brie. (Even the name Cambozola seems to be a combination of

078488

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D11

Camembert, a white mold cheese, and Gorgonzola, a well known blue mold cheese.)

It is an established principle of Customs law, as noted by the Court in Northam Warren Corp., Alltransport, Inc. et. al. v. United States, 65 Cust. Ct. 584, C.P. 4142 (1970), that "The maxim of construction de minimis non curat lex does not apply to a fractional ingredient which performs a useful function." In the instant case, the blue mold cultures—although present in a very small amount by weight in Cambozola—perform a useful function. They impart to the cheese the character and flavor of blue mold (which is why they were added to the cheese) in much the same way as peppercorns, chives, onions or other similar ingredients add their own characteristic flavors to other cheeses. There are important differences between cheeses flavored with these other materials and cheeses flavored with blue mold, however. First, unlike the other flavoring ingredients mentioned, blue mold cultures continue to grow in the cheese and to participate in ripening the cheese. Second, while no specific tariff provision exists for cheese with peppercorns or for cheese with chives, a specific provision does exist for cheese containing blue mold. Accordingly, the presence of blue mold in Cambozola, distributed as it is throughout the cheese, cannot be regarded as negligible.

Regarding the inquirer's claim that Cambozola is a soft ripening cow's mild cheese under Headnote 3(a)(iv), Part 3 of the Appendix TSUS, we note that Cambozola does not meet the tariff definition for such cheese, which excludes cheese with mold distributed throughout its interior. The four photographs mentioned above, the Customs Laboratory report, and the time and manner in which the blue mold cultures are added to the cheese all indicate that the blue mold is distributed throughout the cheese.

078488

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D12

Based on the foregoing, we find that Cambozola is a white and blue mold ripening soft paste cheese similar to Bavariablu, Saga, Lymeswold and other blue cheeses of this white and blue mold type. As such, Cambozola, which is imported in original loaves, is classified under the specific provision for blue mold cheese in item 117.0010, TSUS, and subject to quota in item 950.07, TSUS. An import license, issued to the importer by the United States Department of Agriculture, is required at the time of entry of this merchandise into the United States.

HOLDING:

Cambozola is classified as a blue mold cheese in item 117.00, TSUS, and is subject to quota under item 950.07, TSUS. You should inform the inquirer of this decision.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

REFER TO

CLA-2 CO:R:CV:G
078489 jlj

District Director of Customs
Patrick V. McNamara Building
477 Michigan Avenue
Detroit, Michigan 48226-2568

Dear Sir:

Re: Application for Further Review of Protest No. 3801-6-000288

This protest was filed against your decision in the liquidation on December 27, 1985, of entry No. 84-687692, dated September 12, 1984, covering a shipment of correctable film typewriter ribbons produced in Canada.

This ruling concerns the correct classification of the ribbons.

FACTS:

The merchandise at issue is part No. 9805037, correctable film ribbons, 5/8 inches wide, black, for IBM Selectric II Typewriter, imported in plastic cassettes. The manufacturer states that the approximate value of the components at the time of final assembly is 14 cents for the cassette and 25 cents for the ribbon.

The protestant's broker argues that the instant ribbon cartridges are used in various office machines such as printers and typewriters. He claims that the ribbons are classified under the provisions for office machines not specially provided for, parts of the foregoing, typewriter parts, in item 676.50, Tariff Schedules of the United States (TSUS).

The import specialist believes that, since the ribbon has already been slit and is a textile material at the item of importation, the ribbon is classified under the provision for articles not specially provided for, of

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D14

textile materials, other articles, not ornamented, other, in item 389.62, TSUS.

ISSUE:

Is the correctable film typewriter ribbon cassette classified as typewriter parts in item 676.50, TSUS, or as other textile articles not specially provided for in item 389.62, TSUS?

LAW AND ANALYSIS:

The protestant's broker claims that a protest covering similar merchandise was approved under item 676.50, TSUS, in the past and that the instant merchandise should also be classified in item 676.50, TSUS. He cites Kores Manufacturing Corp. v. United States, Slip Op. 82-42, 3 C.I.T. 178 (1982), Appeal No. 82-33 (decided April 23, 1983), in support of his position.

The import specialist states that, based on cost data from the shipper which indicates that the ribbon is the component of chief value, the articles are of textile material and are classified as other textile articles in item 389.62, TSUS.

In Slip Op. 82-42, supra, the court held that the ribbon imported for further assembly into a cassette in the United States was not textile material "at the point in time for determining component material in chief value." The instant ribbon meets the criteria for textile material at the point in time when its is assembled into a cassette to form the complete article; therefore, Slip Op. 82-42 is distinguishable.

Headnote 1 (iv), Part 4, Schedule 6, TSUS, states "This part does not

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

078484

E1

cover...articles of textile material." Inasmuch as the ribbon is the component of chief value of the cassette, the cassettes are of textile material and cannot be classified in item 676.50, TSUS, because Headnote 1 (iv), supra, precludes it.

An earlier Detroit protest involving similar ribbons was approved by the Detroit import specialist because he assumed that the imported merchandise was similar in all important aspects to the merchandise which was the subject of Slip Op. 82-42. The instant ribbons differ from those in Slip Op. 82-42 in one important way: they are imported in plastic cassettes. Since the ribbon, which is the component of chief value, has already been slit and is a textile material at the time when nothing further remains to be done to it and to the plastic cassette but to assemble them into the completed article, Headnote 1 (iv), supra, precludes them from classification in item 676.50, TSUS. The ribbons are properly classified in item 389.62, TSUS.

HOLDING:

The instant film typewriter ribbon cassettes are classified in item 389.62, TSUS. The protest should be denied in full. You should attach a copy of this decision to the CF19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. Darlene E. O'Brian
Post Entry Supervisor
F. W. Myers & Co. Inc.
West Service Road, 1-87
P.O. Box 188
Champlain, New York 12919

Dear Ms. O'Brian:

In a letter dated June 13, 1986, on behalf of your client, Elite/Biltrite, you inquired as to the dutiable status of the product lines Regency, Opta and Panel Form.

It is your view that this merchandise is classifiable under the provision for wood furniture in item 727.35, Tariff Schedules of the United States (TSUS).

You assert that the named product lines do not include room dividers and thus should not be governed by Headquarters ruling letter No. 076745 dated June 18, 1985, which held that divider panels imported for use with a work station are classifiable under the provision other wood screens in item 206.67, TSUS. It is your position that the imported units are "work stations."

We do not agree with your contentions. As stated in your letter, the work stations start with the "basic-unit" such as RE 374 on page 40 of the Casegood Price List catalogue. The ultimate purchaser then has the alternative to add any combination of shelves, files, desks, returns, pedestals, etc., to complete the unit.

If the basic unit were an actual bookcase, we would agree that it should be classifiable as a unit of furniture. However, it is merely a panel or divider. It serves a dual function of segregating an area in the office and supporting units of furniture.

Consequently, it is our position following HRL 076745 that the back or divider panels are classifiable under the provision for other wood screens in item 206.67, TSUS, and dutiable at the rate of 8 percent ad valorem. Any attachments would be

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E3

dutiable at the rate of 2.8 percent ad valorem under item 727.35, TSUS, if free standing, or at the rate of 5.8 percent ad valorem under item 727.40, TSUS, as parts of furniture, if in need of a divider for support.

Sincerely,

for Harvey B. Fox
Director, Classification
and Value Division

Mr. Cha Lin Wang
The Protective Gloves Manufactory, Ltd.
(DOMINICANA) C POR A
De La Manzana 1B, Zona Franca Industrial
San Pedro De Macoris, Dominican Republic

Dear Mr. Wang:

In a letter dated June 7, 1986, you inquired as to the dutiable status of all cotton work gloves produced in the Dominican Republic from materials made in the United States. A sample glove was submitted for examination.

The sample, style No. 4827, is an all cotton terry cloth knit work glove. The direct processing operation costs are said to be $1.41 per dozen pairs and the U.S. materials costs are stated to be $4.32 per dozen pairs.

You suggest that these gloves are entitled to duty-free treatment under the Caribbean Basin Initiative (CBI).

General Headnote 3(e)(vii), (D), Tariff Schedules of the United States (TSUS), states that articles provided for in an item for which a rate of duty appears in the 'special' column followed by the symbol 'E*' in parentheses, shall be eligible for the duty-free treatment provided for in subdivision (e)(vii) of this headnote except --

> (3) textile and apparel articles --
> (i) in chief value of cotton, wool, man-made fibers, or blends thereof in which those fibers, in the aggregate, exceed in value each other single component fiber thereof.

In view of the foregoing, gloves represented by the sample being in chief value of cotton are not eligible for duty-free treatment under the CBI.

It is our position that gloves represented by style No. 4827 are classifiable under the provision for gloves of cotton, not woven, made from a pre-existing machine knit or woven fabric, or any combination of such fabrics in item 704.4502, TSUSA, and dutiable at the rate of 25 percent ad valorem.

ES

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Cotton gloves are within textile category No. 331. As a product of the Dominican Republic they are currently subject to visa requirements but not to quota restraints.

Sincerely,

Harvey B. Fox

Ms. H. K. W. Ho
Second Secretary
Hong Kong Commercial Affairs
British Embassy
3100 Massachusetts Avenue, N.W.
Washington, D.C. 20008

Dear Ms. Ho:

In a letter dated April 25, 1986, you inquired as to the dutiable status of certain headbands produced in Hong Kong. Three samples (orange, blue, and pink) have been submitted for examination.

You described the merchandise as 70 percent lambswool, 20 percent angora and 10 percent nylon knitted headbands. Noting that the large-sized headbands provide warmth to the wearer in cold weather and are ornamented with a loop, it is our position that they are classifiable under the provision for other women's girls', or infants wearing apparel, ornamented: of wool: Knit in item 384.1390, Tariff Schedules of the United States Annotated, and dutiable at the rate of 28.3 percent ad valorem. The applicable textile category number is 459.

Your samples are being returned under separate cover.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. H.K.W. Ho, Second Secretary
British Embassy
Hong Kong Office, Commercial Affairs
3100 Massachusetts Avenue N.W.
Washington, D.C. 20008

Dear Ms. Ho:

In your letter of June 18, 1986, you ask us to reconsider the textile category of a 100 percent cotton sweatshirt entered at the port of Champlain, New York on entry No. 86-131865-6. You submit a sample along with your letter.

You state that inasmuch as the garment has a hood, a partially opened front, two waist pockets, ribbed bottom and ribbed cuffs, it has all the typical features of a pullover jacket and was correctly classified in textile category 359. The port of Champlain classified the garment in textile category 338/9. You ask us to request the Commerce Department to adjust the 1985 import data in accordance with the change you suggest.

The submitted sample is constructed from finely knit 100 percent cotton French terry fabric which contains approximately 24 wales per inch. The garment has long sleeves with rib knit cuffs, a rib knit waistband, a 2 button placket at the neck, and a hood with a drawstring closure.

The item is designed in sweatshirt style, but with the French terry fabric substituted for the brushed or napped inner surface common to a sweatshirt. It is designed to be worn over the skin or underwear as a sweatshirt is worn. The French terry material is commonly used in shirts. The garment is properly classified under the provision for other men's or boys' wearing apparel, not ornamented, of cotton, knit, other, shirts and sweaters, other, in item 381.4130, Tariff Schedules of the United States Annotated (TSUSA), dutiable at the 1986 rate of 21 percent ad valorem. Textile category 338 applies to garments classified in item 381.4130, TSUS.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Re: Decision on Protest and Application for Further Review
Number 4102-5-000019

Dear Sir:

The above noted protest and application for further review was filed by counsel for protestant West Chester Marketing, Inc., of West Chester, Ohio. At issue is the classification of plastic-coated cotton gloves which are imported from Hong Kong. Ten different styles of gloves are involved.

Customs claims that the gloves are properly classifiable as either gloves ... : of vegetable fibers: made from a pre-existing machine-knit or -woven fabric, or any combination of such fabrics: woven, under the provisions of item 704.40, Tariff Schedules of the United States (TSUS), dutiable at the rate of 25 percent ad valorem, or not woven, under the provisions of item 704.45, TSUS, also dutiable at the rate of 25 percent ad valorem. Importations of gloves which are the products of Hong Kong under either of these tariff provisions are subject to the restrictions of quota category 331, in that visas from the country of origin must be obtained in order to permit their entry into the United States.

Protestant claims that the gloves are properly classifiable as gloves of rubber or plastics: other, under the provisions of item 705.86, TSUS, dutiable at the 1985 rate of 19.3 percent ad valorem. Gloves classifiable under this tariff provision are not subject to quota restrictions.

FACTS:

Commencing February 8, 1985, and ending September 20, 1985, at Cincinnati, Ohio, protestant West Chester Marketing imported ten different styles of plastic-coated cotton gloves (not including men's and women's versions of the same style) under twenty entry numbers. Style numbers 201, 202, 210 and 211 are composed of plastic-coated knit cotton fabric. Style numbers 203, 204, 206, 207, 208 and 788 are composed of plastic-coated woven cotton fabric. Style numbers 208, 210, 211 and 788 contain textile backs and cuffs and are coated only on the palm and inside of the fingers.

E9

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

Redelivery of all gloves was requested because Customs found protestant's claimed classification to be incorrect. Protestant entered all the gloves under the classification as other gloves of plastic under the provisions of item 705.86, TSUS. Customs determined that these gloves were more properly classifiable as gloves of vegetable fibers under items 704.40, or 704.45, TSUS. Additionally, classification of the gloves under the textile provision imposed visa requirements on their entry into the United States. Inasmuch as no visas had been obtained, redelivery was requested. This protest and application for further review was timely filed in response to the denial of entry.

Counsel for protestant describes the gloves as having an outer surface composed of plastic and an inner lining of cotton. The outer surface is claimed to have a plastic, as distinguished from a textile, surface. It is suggested that in some styles the grainy outer surface results from the nature of the plastic coating.

ISSUE:

Are the gloves properly classifiable as gloves of rubber or plastics under item 705.86, TSUS, or as gloves of vegetable fibers, under items 704.40 or 704.45, TSUS, and thereby subject to visa requirements pursuant to textile quota category 331?

ANALYSIS:

Style numbers 203, 204, 206 and 207 are composed of base fabric of plain woven cotton. Both sides of the base fabric have been heavily napped. The exterior of the base fabric is coated with plastic. Textile fibers from the nap penetrate through the coating. Tactilely samples 203 and 204 are furry or fuzzy. The weave construction is barely visible through the plastic. Style number 203 is coated with either yellow or black nontransparent plastic. Style 204 is coated with a yellow plastic. Styles 206 and 207 are coated with a speckled plastic that imparts a grainy feel not characteristic of textile.

A uniform and established practice exists to classify these styles of gloves as gloves of rubber or plastic. See Customs Ruling Letters of December 19, 1973 (Control No. 029939) and September 16, 1986 (Control No. 077460).

West Chester styles 201 and 202 are composed of a base fabric of knit cotton, heavily napped on both sides. The exterior of the base fabric is coated with plastic. Textile fibers from the nap penetrate through the coating, but these

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

078548

fibers can only be seen microscopically. The coating is a flecked brown plastic and the samples have a rough grainy feel that does not resemble a textile.

As with the aforementioned woven styles, a uniform and established practice exists to classify these styles of gloves as gloves of rubber or plastic. See Customs Ruling Letter of September 16, 1986, supra.

Style numbers 210 and 211 are composed of plastic-coated knit cotton fabric. They are similar to styles 206 and 207 except that they are coated only on the palm and inside of the fingers. The back and cuff of these styles are not coated. Style numbers 208 and 788 are composed of plastic-coated woven cotton fabric. Style 208 is similar to style 204 except it, too, is coated only on the palm and inside of the fingers. Style 788 is coated on the palm and inside of the fingers with a nontransparent plastic featuring black polka dots.

Customs has held that gloves which are coated with nontransparent plastic on the palm and inside of the fingers are classifiable as gloves of rubber or plastic pursuant to a uniform and established practice. See Customs Ruling Letter of December 19, 1973, supra. Additionally, Customs has held, without making reference to the existence of a practice, that partially coated gloves are classifiable as gloves of rubber or plastics if their component material of chief value is plastic as opposed to textile. See Customs Ruling Letters of June 19, 1973 (Control No. 026483); February 22, 1974 (Control No. 031651); and January 3, 1975 (Control No. 037515). The subject partially coated gloves, if in chief value of rubber or plastic, must be classified in a manner consistent with the noted rulings.

HOLDING:

Pursuant to a uniform and established practice, West Chester glove styles 201, 202, 203, 204, 206 and 207 are classifiable as gloves of rubber or plastics: other, under the provisions of item 705.86, TSUS, dutiable at the 1985 rate of 19.3 percent ad valorem.

If in chief value of plastic, glove styles 208, 210, 211 and 788 also are classifiable as gloves of rubber or plastics: other, under the provisions of item 705.86, TSUS, dutiable at the 1985 rate of 19.3 percent ad valorem. Gloves classifiable under this tariff provision are not subject to quota restrictions.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

E11

078548

If in chief value of textile, glove styles 210 and 211 are classifiable as gloves ... : of vegetable fibers: made from a pre-existing machine-knit or -woven fabric, or any combination of such fabrics: not woven, under the provisions of item 704.45, TSUS, dutiable at the rate of 25 percent ad valorem. Glove styles 208 and 788, if in chief value textile, are classifiable as gloves ... : of vegetable fibers: made from a pre-existing machine-knit or -woven fabric, or any combination of such fabrics: woven, under the provisions of item 704.40, TSUS, also dutiable at the rate of 25 percent ad valorem Importations of gloves which are the products of Hong Kong under either of these tariff provisions are subject to the restrictions of quota category 331.

Accordingly, if you find the partially coated gloves to be in chief value of plastic, the protest should be allowed in its entirety. If you find the partially coated gloves to be in chief value of textile, the protest should be allowed in part and denied in part. A copy of this decision should be given to the protestant when notice of action is given on Customs Form 19.

Sincerely,

for Harvey B. Fox

Mr. Harold I. Loring
Grunfeld, Desiderio,
Lebowitz and Silverman
Counselors at Law
Suite 2238
Two World Trade Center
New York, New York 10048-0654

Re: G86-1466-5(16)C

Dear Mr. Loring:

This letter is in response to your request for a ruling on four styles of two-piece infants' garments claimed to be playsuits. You have made this request on behalf of M. Hidary & Company, Inc., the importer. Your legal arguments, presented at a meeting at Headquarters on June 12, 1986, and followed by your memorandum of law dated June 30, 1986, represent a further request from your client following your client's direct ruling request to us answered by our file no. 076089. This request substitutes styles presented in our file 076089.

Each sample is a two piece light-weight play-wear garment consisting of shirt-tops and shorts. The shorts each have an elasticized waistband in back covering less than half the circumference. The shorts of styles 1111, 1112, and 1113 are woven twill. The tops for styles 1111, 1112, and 1113 are knitted and lack sleeves. These tops feature a knitted collarband. The top of style 1114 is a shirt with a button closure in front and a collar. The top and bottom are of the same woven fabric and are coordinated in color with an identical printed tropical flower design. The leg openings for the shorts in style 1111 are capped to cover the unfinished edge. No feature ornaments the styles.

Styles 1111, 1113, and 1114 are joined together in wear by the use of various buttonhole/button combinations. Style 1111 has buttons sewn to the outside of the shirt on either side about three inches from the hem. In wear these buttons attach to the shorts through a buttonhole on either side of the

RELEASED TO THE

E13

elastic portion of the waistband. As the theory would have it, an elastic waistband less than half-way around is insufficient to hold the shorts up. So the button attachment of the shorts to the shirt is necessary in order to keep the shorts from falling down, making the use of the top without the bottom not practicable.

Style 1112 is a variation with buttons on the outside of the waistband instead of the buttonholes of style 1111. The shirt has loops of braided textile-covered elastic sewn to the inside seam of the shirt. The shirt would be worn outside the waistband and the loops would encircle the buttons when both parts are worn, so that the shirt would keep the shorts from falling down.

Style 1113 is a button/buttonhole variation with buttons sewn to the outside of the waistband as in style 1112. But here the shirt has buttonholes cut vertically in the appropriate places of the sides of the shirt so that the buttons of the shorts may fit through the buttonholes of the shirt and keep up the shorts. The buttonholes in the shirt are reinforced with thread to keep the friction of the button from unraveling the knitted fabric of the shirt during wear.

Style 1114 is the same design as style 1113 as far as the button/buttonhole arrangement. The difference is that both top and bottom are of the same woven fabric with the same printed design.

You refer in your memorandum to the description of goods intended for textile category designations 337 and 637, found on page 22 of the Textile Category Guidelines, C.I.E. 36/79. That description states in part, "[t]wo-piece physically connected entireties, such as shirts and shorts having buttons and buttonholes...designed to join the two pieces, which are so manufactured that the use of one without the other is not practicable are encompassed within this category. However, button/buttonhole sets in which the pants have substantial elastic waistband, whereby the use of the pants without the shirt is practicable, are not within this provision...." An examination of the samples reveals that styles 1111, 1113, and 1114 fit squarely within the description of the sets that belong in the playsuit category. Buttons and buttonholes are

078560

RELEASED TO THE

E14

placed in various ways to attach the garments during wear so that the attachment functions to keep the shorts from falling down. The loop and button combination of style 1112 performs the same function as the buttonhole/button features and must reasonably be included in this category grouping.

It should be noted that categories 337 and 637 are applied to two-piece garment sets under very limited circumstances. The two pieces must meet the standards for entireties. They must be imported together and marketed and sold as a unit, as well as being intended to be worn together. The parts must also be coordinated as to color or fabric so that the combination of the two parts creates an article having a new commercial identity. These two-piece combinations meet these standards.

Some observers in Customs have noted that elastic loops and buttons as in style 1112 are inconsequential in that they could be cut off or simply not used, yet both pieces would probably still be wearable. To this point we must respond that it may be true that the top and the bottom may be worn separately on occasion and the shorts may stay up without attaching the buttons to the buttonholes or loops, depending on the individual fit. However, in general, the design dictates the wear of the two pieces together and attached. If there were a different standard for what makes a substantial waistband, requiring, for example, no more than one-quarter of the waistband to be elasticized before it is considered substantial, then a stronger case could be made for the necessity of attaching the tops and bottoms in wear. However, the standard generally applicable is less than one-half for elasticized waistbands, and in reality all the samples under consideration here meet the standard for non-substantial waistband. By meeting that standard, they are unaffected by the exclusion for substantial waistbands in the Guidelines, supra.

You have indicated that your client expects to import these styles either with cotton as the fiber in chief value for both top and bottom or with man-made fibers as the component fiber in chief value for both top and bottom.

Styles 1111, 1112, and 1113 combine a knitted top with shorts. In these combinations, the shirt is considered the predominant feature. Therefore, if cotton is in chief value, these styles are classified in item 384.3426, Tariff Schedules of the United States Annotated (TSUSA), dutiable at 10.2 percent ad valorem. This is the provision for "Other women's,

078560

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

F1

girls', or infants' wearing apparel, not ornamented: Of cotton: Knit: Other, Playsuits, sunsuits, washsuits and similar apparel: Consisting of two pieces." This takes textile category 337. If man-made fibers are in chief value, these styles are classified in item 384.8642, TSUSA, dutiable at 7 cents per pound plus 21.4 percent ad valorem. This is the provision for "Other women's, girls', or infants' wearing apparel, not ornamented: Of man-made fibers: Knit: Other, Playsuits, sunsuits, washsuits, and similar apparel: Consisting of two pieces." This takes textile category 637.

Style 1114, with both top and bottom of woven fabric of the same print, if cotton is in chief value, is classified in item 384.5233, TSUSA, dutiable at 9.4 percent ad valorem. This is the provision for "Other women's, girls', or infants' wearing apparel, not ornamented: Of cotton: Not knit: Other: Other: Other..., Coveralls, overalls, jumpsuits and similar apparel: Other: Other: Infants'." This takes textile category 337. If man-made fibers are in chief value, it is classified in item 384.9415, TSUSA, dutiable at 4 cents per pound plus 18.8 percent ad valorem. This is the provision for "Other women's, girls', or infants' wearing apparel, not ornamented: Of man-made fibers: Not knit: Other: Other, Playsuits, (except coveralls, overalls, jumpsuits and similar apparel)...." This item takes textile category 637.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Re: Decision on Application for Further Review of Protest No. 5301-5-000006, on the classification of a Petroleum Product

Dear Sir:

The petroleum product in question was imported from Rotterdam, Netherlands, and entered April 4, 1984, under the provision for motor fuel in item 475.25, TSUS, as unleaded gasoline.

Customs analysis of a sample of the importation disclosed that it had a 50 percent evaporated temperature which exceeded the 250°F maximum set out in ASTM D439, which sets out the standards for recognizing whether a petroleum product is a motor fuel. In addition the Customs laboratory determined that the product contained 14.7 percent dutiable benzenoids of which 9.9 percent was ethyl benzene. It was therefore classified as a benzenoid mixture in item 407.16, TSUS.

In behalf of the importer it is contended that since the product is chiefly used as motor fuel and meets the statutory definition of motor fuel under Headnote 2(b), Part 10, Schedule 4, TSUS, it should be classified as motor fuel. It is argued that the ASTM standards are only guidelines and even if the product's characteristics do not meet the standards, the product could still be chiefly used as motor fuel. Affidavits from claimed experts in petroleum were submitted to substantiate the assertion that the product is chiefly used as a fuel for internal combustion engines in the United States.

In the one affidavit it was stated that from an examination of the specifications and test results, it was concluded that the product was a pyrolysis gasoline. In the affidavit the opinion was expressed that the product was one that the refineries either blend or sell directly. In another affidavit it was concluded that the product was chiefly used in the United States as a motor fuel or as a gasoline blending stock, or "a base for a fuel to which other gasoline components will be added to stretch the number of gasoline barrels finally manufactured."

F3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

As to the contention that the period of time elapsing between the sampling and Customs analysis rendered the results reached unreliable, there is no proof submitted of any Customs lack of care in regard to the tests it conducted. The main contention, however, is that the product, regardless of whether or not it meets requisite ASTM standards, is chiefly used as motor fuel as shown by the affidavits submitted.

The one expert described the product as pyrolysis gasoline. However, there is no evidence that the product in question, whether or not pyrolysis gasoline, is chiefly used as motor fuel in the United States. It might be noted that the court in Dow Chemical Co. v. United States (Slip Op. 86-85) concluded that pyrolysis gasoline was a benzenoid mixture under the predecessor tariff provision to item 407.16, TSUS.

While it is true that ASTM D439 is merely a guideline intended to facilitate the recognition of a petroleum product as a motor fuel, classification of an import as a motor fuel is not precluded even though those standards are not met, if the product is chiefly used in the United States as a motor fuel. The claim in behalf of the protestant is that the product is of a class or kind of petroleum product used as motor fuel or in the blending of a motor fuel. However, as the court has pointed out, petroleum derivatives suitable for use in motor fuels are not dutiable as petroleum derivatives suitable as motor fuels. United States v. Exxon Corp. 66 CCPA 129, C.A.D. 1233, 607 F 2d. 985 (1979). Furthermore, as pointed out in Amorient Petroleum v. United States (Slip Op. 84-46) (1985), if a product was physically incapable of being used as motor fuel without further blending or modification, it could not be classified as motor fuel.

From the evidence in this case, including the affidavits submitted in behalf of the protestant, it is concluded that the product as imported is used in blending a motor fuel and is not chiefly used as a motor fuel as imported. Therefore, the product is correctly classifiable in item 407.16, TSUS.

The protest is denied in full. A copy of the protest decision should be furnished the protestant with the Form 19 Notice of Action.

Sincerely,

Arthur P. Scheffler

Ms. Suzanne Goodwin
Columbia Sportswear Company
P.O. Box 03239
6600 North Baltimore
Portland, Oregon 97203

Dear Ms. Goodwin:

This is in response to your request for a ruling on the tariff classification of certain men's boxer-style shorts. Samples were provided along with your letter dated June 25, 1986.

Style 6008 is a pair of men's woven nylon shorts that has a fully elasticized waistband with a functional drawstring, a full support liner of knit construction, two side seam pockets, and a rear inserted pocket on the right side with a zipper closure. The other garment, style 6016, is a pair of men's woven nylon shorts with a fully elasticized waistband and two side seam pockets. It does not have a support liner.

We consider style 6008 to be swimming trunks which are classifiable under the provision for other men's wearing apparel, not ornamented, of man-made fibers, not knit, swimming trunks, in item 381.9570, Tariff Schedules of the United States Annotated (TSUSA), dutiable at the rate of 15 cents per pound plus 27.5 percent ad valorem. Style 6008 falls under category 659.

To be classifiable as swimwear, men's boxer-style shorts must have a substantial liner that is lightweight and nonabsorbable. Thus, style 6016 which does not have a support liner is classifiable as men's woven shorts in item 381.9585, TSUSA, dutiable at the rate of 15 cents per pound plus 27.5 percent ad valorem. This merchandise requires a visa for category 647.

Mr. Dave Richards
Richard's Hydro-Tech Inc.
Box 1259
Summerland, British Columbia VOH 1ZO
Canada

Dear Mr. Richards:

This is in further response to your letter of June 19, 1986, in which you requested information concerning the dutiable status of merchandise described as a snow valve.

The merchandise in question is a stainless steel hydrant assembly designed specially for use at ski resorts for the production of snow artificially. Its special features adapting it to this use include, among others, a drain cock to prevent freezing of residual water and modular construction for easy disassembly for repair purposes.

Steel hydrants are classifiable under the provision for hand-operated valves of iron or steel in item 680.17, Tariff Schedules of the United States. The current column 1 rate of duty required under this provision and applicable to products of Canada is 8.5 percent ad valorem.

Sincerely,

William P. Heuffler

078623

Ms. Marcia K. Cowan, Esquire
1201 Pennsylvania Avenue N.W.
Suite 730
Washington, D.C. 20004

Dear Ms. Cowan:

In your letter of May 12, 1986, you requested a tariff classification for a ladies' disposable undergarment on behalf of Kimberly-Clark. You submitted a sample along with your letter. The garment will be worn by menstruating women. It is disposable and is intended for one-time use only.

The sample has an elasticized waistband and leg opening. The garment is composed of a central panel of two layers of non-woven man-made fibers and two side panels of knit man-made fibers. You indicate that the absorbent core in the crotch area will consist of either 100 percent wood pulp (fluff); coform, which ranges from 70 percent to 95 percent pulp and from 30 to 5 percent polymer; or a combination of wood pulp and coform. A component material breakdown which you submitted indicates that man-made fibers are the component of chief value.

You also indicate that the components, which are of United States origin, will be shipped to Mexico ready for assembly by mechanically stitching the nylon side panels to the central panel and by elasticizing the leg and waist openings using standard thread and rubber elastic.

With respect to foreign assembly operations, item 807.00, Tariff Schedules of the United States (TSUS), applies to fabricated United States components that are designed to be fitted together with other components in an assembly process, with no operations performed thereon except attachment of the components to form the imported merchandise and operations incidental thereto.

In the absence of samples of the aggregate components, we are unable to determine with definiteness the applicability of item 807.00, TSUS. Allowances will be made under item 807.00, TSUS, however, for all components of United States origin, that are exported in condition ready for assembly without further fabrication. Allowances may also be made for the absorbent core insert between the outer and inner liner of the center panel, provided that the absorbent core is exported as a cut-to-shape component ready for assembly. No allowances can be made for the absorbent material, wood pulp, coform, or a combination, if it is exported as an amorphous, fungible mass from which certain portions are pulled to insert between the baffle and liner.

F8

You claim that the instant garment is not an item of wearing apparel, since the absorbent pad is the main component by both weight and function and since the side panels serve only to keep the pad in place. The instant article is similar to the diaper panty in Customs Headquarters Ruling Letter (HRL) 065855, dated September 17, 1981, which held that a diaper panty used in conjunction with urinary and colostomy problems was classified as underwear.

The instant garment is made of knit fabric (the side panels) and non-woven fabric (the center panels). The central panel is more noticeable than the side panels, however, so the non-woven fabric imparts the essential character of the garment. Accordingly, the ladies' disposable undergarment is classified under the provision for underwear, of man-made fibers, not knit, in item 378.6530, TSUS, dutiable at the rate of 8.5 percent ad valorem plus 2 cents per pound.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Robert L. McGeorge, Esq.
Lillick, McHose and Charles
Attorneys at Law
21 Dupont Circle, N.W.
Washington, D.C. 20036

Dear Mr. McGeorge:

Your letter dated April 3, 1986, submitted on behalf of your client, Ice Dream International, Inc., regarding the tariff classification and quota status of a product called "Restorative T/C."

Your submission describes the subject merchandise as consisting of fructose, whey, and stabilizers. Fructose is the component material in chief value. The butterfat content is approximately 1.3 percent. When mixed with water and frozen, the resulting product is said to be comparable to soft ice cream or frozen yogurt in appearance, texture, and taste. Your client plans to import this merchandise in three forms: as a dry mix in 25 kilogram bags, a dry mix in two pound bags, and as a frozen, fluid dessert product in pints and quarts. Twenty-five kilogram bags would be destined for new Ice Dream retail outlets or established retail outlets, where the mix would be used to prepare a dessert for sale to retail customers. Two-pound bags of dry mix and frozen, prepared, pints and quarts would be sold directly to the consuming public through retail outlets.

Since the product is a mixture of ingredients, it would not qualify for classification as either a fluid or dried whey under either item 118.00, for 118.05, Tariff Schedules of the United States (TSUS). The frozen prepared product would not qualify for classification as an ice cream under item 118.25, TSUS, inasmuch as it is not produced from milk or cream.

The Restorative T/C preparations would therefore be classifiable as other edible preparations not specially provided for, in Subpart B, Part 15, Schedule 1. The 25 kilogram dry mix is classified in item 183.00, TSUS, dutiable at 10 percent ad valorem and subject to quota restrictions in item 950.19, TSUS; the two-pound dry mix and the prepared, frozen product are classified in item 183.05, TSUS, dutiable at 10 percent ad valorem, not subject to quota restrictions.

F10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

In your submission, you argue that the subject product imported in 25 kilogram bags, packaged for institutional use is subject to both the end product and retail product exception. You have based this argument on certain Customs decisions pertaining to Presidential Proclamation 5071, promulgated under item 958.15, Appendix to the Tariff Schedules, to enforce the sugar quota. The language of item 958.15 is identical to the language set forth in item 950.19. The rulings which you rely upon are Headquarters letters 553050/073278 LCS dated August 22, 1984, and 073002/073277 LCS dated October 28, 1983, concerning identical language appearing in tariff item 958.15, TSUS, a quota for certain edible preparations containing sugar. In brief, the latter ruling held that if certain sugar containing products were used in the same form as imported and retained that form in the end product, they would be considered to have established a prima facia case that they were incapable of being further processed or mixed with other ingredients; reconstituting a concentrated product with water was not to be considered "mixing with...other ingredients." The former ruling held that certain edible preparations containing sugar packed in "institutional sized packaging" were within the retail packaging exemption.

It is the position of the Customs Service that the above decisions on the administration of the sugar quota are not to be applied in administering the dried milk quota. Our position is that the "finished product" and "retail package" exceptions to this and other dairy quotas were intended to be, and administratively have been, narrowly defined.

In this regard, your attention is directed to page 5 of ORR Ruling 072051 dated January 28, 1983, in which we stated:

> Headquarters has consistently ruled that the cited language of the quota restraint provision in item 950.16, TSUS, as well as the others referenced, together with similar language set forth in item 182.92, TSUS, (i.e, "...not packaged for retail sale"), is to be strictly construed to effectuate the obvious and stated intent of excluding or limiting importations of dairy products and certain products containing dairy products in order to protect domestic industry and prevent material interference with price support programs of the Federal Government. T.D. 69-52; Swan & Finch Company v. United States, 190 U.S. 143 (1943); Plez-Greenstein Co. v. United States, 17 CCPA 305, T.D. 43718 (1929).

078626

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Simply stated, other policy considerations were involved in implementing Presidential Proclamation 5071.

T.D. 69-24 concerned itself with tariff item 182.95 (now 182.92), the provision for edible preparations containing over 5.5 percent butterfat and not packaged for retail sale. This decision noted that Customs would require evidence of chief use of a product in the retail trade to justify classification outside this provision. T.D. 69-52, setting forth Presidential Proclamation 3884 containing quota categories 950.22 and 950.23 for the edible preparations subject to the above tariff classification, noted as an exception to the quotas those articles "which are packaged for distribution in the retail trade and ready for use by the purchaser at retail." The "retail package" exemption language of the quota at issue (950.19) was cited by Headquarters in letter 072051 LCS dated January 28, 1983, where such language was stated to be "strictly construed" in order to carry out the intent of the dairy quotas. In Headquarters letter 065964 MJ August 26, 1981, the tariff classification of a certain dry beverage base hinged upon whether it would be "packaged for retail sale in consumer size containers." If not so packaged item 950.19 would have applied.

From the above, it is evident that the "retail package" exemption for dried milk quota purposes is not to be treated the same as that for sugar quota purposes. The "retail package", for dairy quota purposes, has never been, and was never intended to be broadened to include "institutional-size" containers. The instant merchandise, in dry form in 25 kilogram bags sold to retail outlets, is within the scope of item 950.19.

Packaging, however, is but part of the exception to the dried milk quota provision. As noted above, to be outside the quota a product must be retail packaged and not capable of being further processed or mixed with other ingredients. The subject dry mixes must be combined with water and then frozen. Although Headquarters has held that reconstituting a concentrated product with water is not within the scope of this language for sugar quota purposes, a careful reading of administrative decisions regarding the dried milk quota results in a different conclusion.

Headquarters letter 069225 JH dated December 17, 1981, concerned the classification and quota status of a concentrated liquid beverage base. C.S.D. 81-157 and letter 065964 MJ of August 21, 1981, dealt with dry beverage bases. All three had to mixed with water to make the finished product. All were, or potentially were to be, packaged in retail size

F12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

078626

containers. Where these products were classified in item 183.05, the reason was due to their packaging, rather than form. When so packaged they no longer met the final requirement of item 950.19. Clearly, then, a dry or concentrated product that must be mixed with water is within the scope of the milk quota. The subject dry mixes meet this quota test.

Based upon the foregoing, it is the opinion of this office that "Restorative T/C," in 25 kilogram bags, is classifiable in the provision for edible preparations not specially provided for... other, in item 183.00, TSUS, dutiable at 10 percent ad valorem and subject to quota restrictions. The dry mix in 2 pound retail packages, and the prepared, frozen product in pints and quarts, is classifiable in the provision for edible preparations not specially provided for... other, in item 183.05, TSUS.

Sincerely,

Arthur P. Schaffner

Irving W. Smith, Jr., Esq.
Law Offices of
George R. Tuttle, P.C.
National Place, Suite 1200F
1331 Pennsylvania Avenue, N.W.
Washington, D.C. 20004

Dear Mr. Smith:

This is in response to your letter of July 9, 1986, in which you request a second reconsideration of New York Region ruling No. 810984, dated October 31, 1984, concerning the tariff classification of certain Konig brand snow chains made in Italy. In our letter of June 19, 1986, in response to your previous petition for reconsideration, we sustained the tariff classification of the chain under the provision for "chain * * * other" in item 652.35, Tariff Schedules of the United States (TSUS).

It is your position that the tariff classification is controlled by an established and uniform practice and that a further reconsideration is now warranted since we did not previously respond to the practice issue when initially raised. Specifically, you claim the merchandise is classifiable under the provision for "chain * * * the links of which are of stock essentially round in cross section * * * under 5/16 inch in diameter" in item 652.24, TSUS. You further assert that the practice requiring that classification was created by the publication of C.S.D. 80-240, 14 Cust. Bull. 1158, in which certain chain was classified under the same superior heading, but not under the same item number. It is your position that that decision stands for the proposition that D-shaped chain is regarded as essentially round in cross section and that the instant merchandise constitutes D-shaped chain as contemplated in the cited decision.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F14

Regardless of those claims, it is clear, as we explained in our previous reconsideration, that the cross-sectional configuration of the instant merchandise and that of the chain which was the subject of the published decision are not the same, however you or we choose to describe them. Therefore, your claims, at best, can only be regarded as the argument that the principle of the published decision controls. The purpose of the practice statute, section 315(d), Tariff Act of 1930, as amended, is to prevent changes in the tariff classification of the same merchandise without advance notice. We do not concede that section 315(d) requires application of the principle of a published decision to merchandise which is not the same as the merchandise in the decision. Nor do we concede that the tariff classification of merchandise under one breakout under a superior heading necessarily constitutes a practice for the classification of similar, but not identical, merchandise under another breakout.

However, to the extent a publication establishes a practice, that practice is for the merchandise as described and identified in the decision as a whole, not in any isolated description or designation in any single line of the decision out of context with the rest of the decision. Taking the published decision in question in its entirety, it did not deal with chain simply described as D-shaped in cross section. The chain was rather variously referred to as having a cross section "more of a 'D' rather than a circle" and as "in the general shape of a 'D'." Emphasis now supplied. Further the merchandise was described, in accordance with its actual "lemon" shape we later referred to in our previous reconsideration, as having a "shorter diameter" and a "longer diameter." If a strict "D" shape had been involved, there would have been only one diameter and a radius. It is our view that a fair inference from reading the published decision in its entirety is that the merchandise, whether or not described as D-shaped, had no single flat surface, and the decision in no way could be regarded as a precedent or a practice governing the tariff classification of the instant merchandise which by contrast, and unlike the typical "D" shape, has in its cross-sectional configuration three flat surfaces.

In this connection, we further note that the maximum cross-sectional dimensions of the instant product are along diagonals which are not congruent with the diameter of any curved surface. In our previous discussion in our published

078627

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

61

decision we made allowances in determining diameter size where the product was only essentially round and therefore out of round. We do not believe it is a fair inference from our comments that we would regard diameter dimensional criteria in the applicable TSUS provisions to be satisfied by dimensions, as with respect to the instant merchandise, which have no reference to any circular configurations at all.

Our tariff classification of the instant merchandise is predicated on our finding that a factual situation is involved significantly different from the factual situation which was involved in our previously published decision. It is well established that we may, and in fact have the obligation to, evaluate merchandise as to whether it involves the same facts as those involved in a published precedent. Such factual determinations merely involve the performance of required duties and do not constitute rulings by the Secretary of the Treasury changing dutiable status as a result of new interpretations under the law within the contemplation of section 315(d). Hensel, Bruckmann & Lorbacher, Inc. v. United States, 49 CCPA 15, C.A.D. 787 (1962).

For the foregoing reasons, we continue to affirm the New York Region ruling concerning which you have petitioned for a reconsideration.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

District Director of Customs
P.O. Box 2450
San Francisco, California 94126

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 2809-4-001250

The above-captioned protest and application for further review were filed against your tariff classification of a color plotter which was the subject of entries filed at the port of San Francisco in 1984. This merchandise is a product of Japan. Our decision follows:

ISSUE:

Duty was liquidated at the 1984 column 1 rate of 5.9 percent ad valorem for drafting machines in item 710.80, Tariff Schedules of the United States (TSUS). It is claimed this merchandise is properly classifiable under the provision for office machines, not specially provided for (n.s.p.f.), in item 676.30, TSUS. The 1984 column 1 rate of duty required under that provision was 4.2 percent ad valorem.

FACTS:

The merchandise is the Apple Color Plotter Model 410. It is a peripheral for an Apple computer producing graphics in eight colors using four pens. It provides printouts on paper or transparencies of charts, graphs, and other X-Y data for business, scientific or engineering purposes.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G3

078628

LAW AND ANALYSIS:

In order for merchandise to be classifiable under item 676.30, it must meet the definition for office machines in Headnote 2(a), Subpart G, Part 4, Schedule 6, TSUS. But even if the machine meets the definition, Headnote 1(v), Part 4, Schedule 6, excludes from that schedule merchandise otherwise described in Schedule 7, TSUS, or elsewhere.

Therefore, avoidance of item 710.80 can only be based on the conclusion that the plotter in question is not a drafting machine. However, it uses pens and operates on a coordinate system just like any other drafting machine, automatic or otherwise. Further, we can discern no significant differences between the finished product drafted by other means and one made by the instant device. It is to be further noted that a tariff provision includes all forms of the article. Astra Trading Corp. v. United States, 56 Cust. Ct. 555, C.D. 2703 (1966).

With respect to the claim that the merchandise is excluded under the doctrine of ejusdem generis, that doctrine does not apply since the pertinent language under which the merchandise has been classified is "drafting machines" not "other instruments * * * which are drawing * * * instruments." If the latter were the case, then there would be some comparison with calipers, angles, etc., which are simple devices. However, "drafting machines" are not limited to simple devices, and, in fact, we are unaware of any devices other than complicated coordinate-type apparatus which would be included under that description.

With respect to the argument that Data Products Corporation v. United States, 4 CIT 234 (1982), is controlling, that litigation dealt with a different competing tariff provision with a different legislative history. We do not agree that it necessarily follows that because a peripheral

G4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

078628

printer in a data processing system does not qualify for tariff purposes as printing machinery a plotter does not qualify as a drafting machine. We have consistently been of the opinion that control by a computer or other employment of digital electronics does not bring merchandise within the provisions for office machines in Subpart G, Part 4, Schedule 6, if the ultimate function is covered by provisions elsewhere in the TSUS. More specifically, we have always excluded computer-controlled plotters from Subpart G as far back as our decisions in T.D. 70-254(13), 4 Cust. Bull. 784 (1970), and T.D. 56353(44), 100 Treas. Dec. 48 (1964).

Finally, classification under item 710.80 cannot be avoided solely on the basis that drawing apparatus does not operate independently and is controlled by a computer. Our conclusion that that item is applicable makes it unnecessary to consider the argument that classification by similitude is warranted.

HOLDING:

We find that the merchandise is properly classifiable under the provision for drafting machines in item 710.80, TSUS. Accordingly, the protest should be denied in full. A copy of this decision also should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Scheffler

Ms. Chari Hoffman
Import Department
Pagoda Trading Co., Inc.
44 Kimler Drive
St. Louis, Missouri 63043

Dear Ms. Hoffman:

In a letter dated April 23, 1986, you inquired as to the dutiable status of a woman's fabric boot produced in China. A sample was submitted for examination.

The sample designated as style No. 64123W consists of a polyvinyl chloride bottom with a cotton corduroy upper extending to above the ankle. Two laces are stitched on both sides of the instep. The laces are guided through six corduroy loops across the vamp and tied at the center.

Item 700.59, Tariff Schedules of the United States (TSUS), provides for footwear of the slip-on type, that is held to the foot without the use of laces or buckles or other fasteners. The sample does not qualify for classification under this provision because it has a braided lace across its instep which can be tightened to adjust the fit.

Therefore, it is our position that the subject boot is dutiable according to value per pair under items 700.64 through 700.69, TSUS.

Sincerely,

Arthur P Schaffner

for Harvey B. Fox
Director, Classification
and Value Division

078638

Ms. Chari Hoffman
Import Department Pagoda
Trading Company Inc.
44 Kimler Drive
St. Louis, Missouri 63043

Dear Ms. Hoffman:

Your letter dated March 7, 1986, addressed to our New York office concerning the tariff classification of two styles of ladies' boots produced in Taiwan, has been referred to this office for a direct reply to you. Two sample boots were submitted for examination.

The sample designated as style No. 24977 is a woman's plastic boot with a bifurcated top and a zipper closure in the front. This boot has a unit molded sole with some overlap which is less than 1/4 inch and this overlap would not be considered a foxing-like band. It is our view that this boot was intended to be worn with a cuff because of the point at which the zipper terminates at the top of the boot, and the fact that the size label is stitched into the back of the boot at a point where it would be below the top of the cuff.

The sample designated as style No. 20904W is a woman's plastic slip-on kneeboot with a synthetic fleece lining and a unit molded wedge type sole. There is some overlap of the sole onto the upper which is less than 1/4 inch and this overlap would not be considered a foxing-like band. While the top of this boot is not bifurcated, it could conceivably be turned down for a cuff effect especially since the size label on the sample is loosely basted and could be easily removed.

Inasmuch as the exterior surface areas of the boot uppers are not over 90 percent plastic, classification under item 700.56, Tariff Schedules of the United States (TSUS) is precluded. It is our opinion that boots represented by the samples are protective against cold and wet weather and are, therefore, classifiable under the provision for other footwear which is over 50 percent by weight of fibers and rubber or plastics with at least 10 percent by weight being rubber or plastics and having uppers of which not over 90 percent of the exterior surface area is rubber or plastics and which is

G7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

078638

designed to be worn over or in lieu of other footwear as a protection against water, oil, grease, or chemicals or cold or inclement weather in item 700.57, TSUS, and dutiable at the rate of 37.5 percent ad valorem.

However, in the event that the size label on style No. 20904W is securely stitched at the top of the boot where it is now located, it is our view that the boot is intended to be worn without a cuff. In that case the sample would be dutiable at the rate of 6 percent ad valorem under item 700.56, TSUS.

Sincerely,

Thomas L. Lobred

078659

Area Director of Customs
6 World Trade Center
New York, New York 10048-0945

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-017356

This protest was filed against your decision in the liquidation on October 7, 1983, of entry No. 83-374997, covering a shipment of footwear produced in South Korea.

This ruling concerns the correct component of chief value and tariff classification of the footwear.

FACTS:

The tariff classification of three types of shoes is at issue here: a child's velcro jogger, men's B/B shoes, and youths' B/B shoes.

The protestant's lawyer claims that each shoe is in chief value of leather and is properly classified under the provision for footwear of leather (except footwear with uppers of fibers), other, for men, youths and boys, in item 700.35, Tariff Schedules of the United States (TSUS), or for other persons, other, in item 700.45, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G9

078659

The import specialist maintains that, according to the protestant's own figures, the chief value is rubber/plastic and that the footwear is correctly classified under the provision for other footwear, other, other, in item 700.95, TSUS.

ISSUES:

What is the component of chief value? What is the proper tariff classification of these shoes?

LAW AND ANALYSIS:

The protestant's attorney claims that each of the shoes (all of which are claimed to be in chief value of leather) is covered by a CF 5523 and/or a detailed component cost breakdown which establishes that the shoes are in chief value of leather. He claims that this protest should be processed pursuant to Headquarters instructions as contained in its recent telex of October 15, 1984. He asserts that the shoes are classified as footwear of leather, in items 700.35, TSUS, and 700.45, TSUS, and that the protest should be approved.

No new value breakdowns were submitted along with this protest. The original manufacturer's value breakdowns

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G10

submitted with the entry reflect the following costs:

Invoice #1		Leather Costs:		Rubber and Plastic Costs:
Child's Velcro Joggers		$0.99		$0.74
	Cutting	0.11	Cutting	0.17
		$1.10	Trimming	0.08
			Sole Labor	0.14
				$1.13
Invoice #2				
Men's B/B Shoes		$1.33		$1.05
	Cutting	0.12	Cutting	0.17
	Trimming	0.06	Trimming	0.09
		$1.51	Sole Labor	0.20
				$1.51
Invoice #3				
Youths' B/B Shoes		$1.91		$1.75
	Cutting	0.22	Cutting	0.15
	Trimming	0.09	Trimming	0.10
		$2.22	Sole Labor	0.40
				$2.40

(We note that there is no breakdown of weights on footwear uppers shown, so it is not possible to allocate stitching charges shown on the above manufacturer's breakdowns.)

In view of the costs outlined above, we find that the footwear is in chief value of rubber/plastics and is correctly classified in item 700.95, TSUS.

HOLDING:

The footwear at issue is classifiable as other footwear in item 700.95, TSUS. The protest should be denied in full.

Mr. Martin Silverman
D.M.A.S. Corporation
P.O. Box 3206
San Rafael, California 94912

Dear Mr. Silverman:

In your letter of May 6, 1986, you requested a tariff classification ruling for a three-piece pajama set consisting of a top and two bottoms. You submitted a sample set along with your letter.

We assume that the pajamas are in chief value of cotton. The top and one bottom would be classified as pajamas in item 384.4215, Tariff Schedules of the United States (TSUS), dutiable at the 1986 Column 1 rate of 8 percent ad valorem. The applicable textile category is 351. The additional bottom is classified under the provision for other nightwear in item 384.5226, TSUS, dutiable at 9.4 percent ad valorem. The applicable textile category is 351.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Area Director of Customs
New York Seaport
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-005601

This protest was filed against your decision in the liquidation on February 10, 1984, of entry No. 84-121858-5 dated January 17, 1984, covering a shipment of athletic footwear produced in Korea.

FACTS:

The athletic footwear involved was liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

1. Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather?

2. Is Customs required to accept the cost breakdowns submitted by the protestant?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A3

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete; (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous, or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, was that data submitted by importers need not be accepted if there is "tangible evidence" that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

In reviewing the component value breakdowns submitted, we note that the manufacturer has allocated his stitching costs on the basis of his material costs counting the costs of materials with the "V" typed in the "stitching part" column. This allocation is not in agreement with the instruction set forth in L.D. 81-0186 dated December 16, 1981, that the "cost of stitching leather overlays onto the fabric uppers should be allocated among the materials comprising the uppers in proportion to their relative weights."

078665

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A4

Therefore, we have ignored the stitching charges shown on the value breakdowns because they are not calculated correctly. After excluding the stitching charges, we note the following styles are in chief value of rubber/plastics as follows:

Style No.	Leather Total	Rubber/Plastic Total
JOG 6540 (Inv. 2/pg. 28)	$0.573	$0.576
BOG 96277 (Inv. 3/pg. 34)	1.109	1.253
BOG 96410 (Inv. 4/pg. 43)	0.822	0.959
JOG 6542 (Inv. 4/pg. 49)	0.573	0.576
BOG 96277 (Inv. 5/pg. 65)	1.109	1.253
JOG 96543 (Inv. 5/pg. 71)	0.573	0.576

In view of the foregoing, classification under item 700.95, TSUS, was appropriate.

With respect to the other styles which are claimed to be in chief value of leather, we have no "tangible evidence" which would permit us to categorically state that the information provided by the protestant as to component material of chief value is false. Accordingly, those styles should be reliquidated under item 700.35, TSUS, or item 700.45, TSUS, as applicable.

HOLDING:

The protest should be denied in part as to style Nos. JOG 6540 (Inv. 2/pg. 28), BOG 96277 (Inv. 3/pg. 34), BOG 96410 (Inv. 4/pg. 43), JOG 6542 (Inv. 4/pg. 49), BOG 96277 (Inv. 5/pg. 65)

078665

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A5

and JOG 96543 (Inv. 5/pg. 71). The protest should be allowed in part as to the remaining styles. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-005487

This protest was filed against your decision in the liquidation on January 27, 1984, of entry No. 84-121548-1 dated December 19, 1983, covering a shipment of athletic footwear produced in Korea.

FACTS:

The nylon/leather athletic footwear involved was liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has evidence in its

A10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

possession that the cost breakdown is erroneous, or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on the matter was that data submitted by the importer need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

A review of the cost breakdowns submitted shows that the manufacturer has allocated his stitching costs on the basis of his material costs, counting the costs of materials with the "V" typed in the "stitching part" column. This allocation is not agreement with the instructions set forth in L.D. 81-0186 dated December 16, 1981, that the "cost of stitching leather overlays onto the fabric uppers should be allocated among the materials comprising the uppers in proportion to their relative weights."

Therefore, we have ignored the stitching charges shown on the manufacturer's cost breakdowns because they are not calculated correctly and without the stitching charges, we note that the following styles with split leather overlays are in chief value of rubber/plastics:

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-005708

This protest was filed against your decision in the liquidation on March 9, 1984, of entry No. 84-122123-9 dated January 31, 1984.

FACTS:

The nylon/leather athletic footwear involved was liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

1. Do the cost breakdowns submitted by the protestant show that the footwear is in chief value of leather?

2. Is Customs required to accept the cost breakdowns submitted by the protestant?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

A13

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions, cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete; (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous, or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining the component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, was that importer submitted data need not be accepted if there is "tangible evidence" that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

In reviewing the component value breakdowns submitted, we note that the manufacturer has allocated his stitching costs on the basis of his material costs counting the costs of materials with the "V" typed in the "stitching part" column. This allocation is not in agreement with the instruction set forth in L.D. 81-0186 dated December 16, 1981, that the "cost of stitching leather overlays onto the fabric uppers should be allocated among the materials comprising the uppers in proportion to their relative weights."

078669

A14

Therefore, we have ignored the stitching charges shown on the value breakdowns because they are not calculated correctly. After excluding the stitching charges, we note that the following styles are in chief value of rubber/plastics as follows:

Style No.	Leather Total	Rubber/plastic Total
BOG 96277 (Inv. #1&2)	$1.109	$1.253
EOG 96217 (Inv. #3)	.844	1.099
BOG 6217 (Inv. #5)	1.177	1.313
EOG 6217 (Inv. #6)	.844	1.099

In view of the foregoing, classification under item 700.95, TSUS, was appropriate.

With respect to the other styles which are claimed to be in chief value of leather, we have no "tangible evidence" which would permit us to categorically state that the information provided by the protestant as to component material of chief value is false. Accordingly, those styles should be reliquidated under item 700.35, TSUS, or item 700.45, TSUS, as applicable.

HOLDING:

The protest should be denied in part as to style Nos. BOG 96277 (Inv. #1&2), EOG 96217 (Inv. #3), BOG 6217 (Inv. #5) and EOG 6217 (Inv. #6). The protest should be allowed in part as to the remaining styles.

Sincerely,

Arthur P. Schaffner

Dear Ms. Liguori:

In your letter of June 20, 1986, on behalf of your client Motormite Manufacturing Co., Inc., you asked for a tariff classification ruling covering a product catalog from Taiwan.

The catalog, of U.S. authorship, both illustrates and describes the products offered for sale by Motormite. The prices of the various products of U.S. origin will not be shown, but will be printed on separate price sheets in the United States.

Printed catalogs without prices or printed price lists are classified under the provision for books not specially provided for, in item 270.25, Tariff Schedules of the United States (TSUS), following ORR Ruling 74-0099 (T.D. 74-98(10)), dated April 18, 1974. Item 270.25, TSUS, is a duty free provision.

Sincerely,

Arthur P. Schaffer

[redacted]

Dear [redacted]

In your letter of June 16, 1986, you request a tariff classification for nursing pads manufactured in Canada. You submitted two samples of these pads along with your letter, one intact and one bisected in order to show a cross-section of the pad's components. Each bears the printed instructions: "Peel (release paper)...Press Firmly to Inside of Bra." Neither is marked with the country of origin, Canada.

You state that the pads are manufactured in a continuous operation in Montreal. First, a pulp sheet is processed in a Fitz mill where it is ground, deposited in a pulp batt and later conditioned. The pulp is bound to a tissue to form the inner pad. This pad is covered with a polyester/rayon non-woven fabric to which the release paper is affixed.

The nursing pad is composed of five components: pulp, tissue, cover, release paper, and adhesives. In deference to your request for confidentiality, we will not mention a specific value breakdown for these components, but the pulp is the component of chief value.

The nursing pads are classified under the provision for articles of pulp in item 256.70, Tariff Schedules of the United States (TSUS), because the component of chief value is pulp.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-005509

This protest was filed against your decision in the liquidation on February 3, 1984, of entry No. 84-121511-9 dated December 16, 1983, covering a shipment of athletic footwear manufactured in Taiwan.

FACTS:

The nylon/leather joggers involved were liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Does the cost breakdown submitted by the protestant show that the footwear is in chief value of leather?

LAW AND ANALYSIS:

The cost breakdown submitted with this protest is same as the original cost breakdown submitted by the manufacturer. It shows a leather cost including cutting and trimming charges of 95 cents per pair while the rubber/plastics cost, including

B4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

cutting and trimming charges, amount to $1.90. If there was an error in the manufacturer's rubber/plastics calculations, it should have been corrected and a new cost breakdown submitted by the protestant. Based on the information before us it is our position that classification of the footwear under item 700.95, TSUS, was appropriate.

HOLDING:

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffer

Mr. Darrell R. Norman
Norman Krieger, Inc.
P.O. Box 92599
Los Angeles, California 90009

Dear Mr. Norman:

This is in response to your letter of May 22, 1986, filed on behalf of Internet Trading Corporation, requesting the tariff classification of a wine bottle suit, two bottle suits and a can suit, all manufactured in Taiwan. Samples of these products are provided. The articles are designed to fit wine bottles, beverage bottles or beverage cans. They are all composed of neoprene rubber which is laminated to two-way nylon stretch material. The material forms the entire exterior and interior surfaces of the suits with the exception of the exterior of the bottoms, which is of neoprene rubber.

The wine bottle suit measures approximately 10 and 3/4 inches in height. It has a zipper closure which runs 7 inches lengthwise up the bottle neck. There is a braided textile carrying cord onto which a wooden carrying handle is attached.

Both bottle suits measure approximately 8 and 1/2 inches in height. They have zipper closures 6 inches in length running lengthwise up the bottle neck. Both have designs printed on their front and back surfaces. One sample has a triangular textile logo glued to its front side.

The can suit is approximately 4 and 1/4 inches in height. It has designs printed on the front and sides of its exterior surface. It is sewn together and finished with a multicolored textile strip covering the seam. Unlike the other products, it does not have a zipper closure.

You suggest that all the articles are most properly classifiable as articles chiefly used for serving or storing food or beverages: all the foregoing of rubber or plastic; other, under the provisions of item 772.1500, Tariff Schedules of the United States Annotated (TSUSA), dutiable at the rate of 4 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

86

076890

You provide information indicating that the cost of the neoprene rubber exceeds that of the nylon jersey fabric in all of the products. Based on this evidence of component material of chief value, you assert that the products can be classified under the aforementioned Schedule 7 tariff provision.

We do not agree. Schedule 3, Headnote 2(a)(iv), TSUSA, defines the term "textile materials" for tariff purposes to include the fabrics provided for in Part 3 and Part 4 of Schedule 3. Woven fabrics of textile materials that are coated, filled or laminated with rubber or plastic material are expressly provided for in Schedule 3, Part 4C, TSUSA. As such, the cost of the coating, filling or lamination is allocated to the cost of the textile material. See I.A. 62/81, and ORR Ruling 379-68. Using the cost breakdowns provided and allocating the cost of the neoprene rubber filling to the cost of the textile material, the articles are considered to be of textile materials for tariff purposes. Classification under item 772.1500, TSUSA, is precluded.

In Headnote 2(a), Schedule 7, Part 1D, TSUSA, the term "luggage" is defined as "... articles designed to contain clothing or other personal effects during travel." The wine bottle carrier is designed with a wooden handle attached to a braid textile cord to facilitate carrying. The suggested use of the wine bottle carrier as serving and storing beverages is, in our view, subordinate to its use as a carrier of personal effects, in this case wine. Accordingly, the wine bottle carrier is classifiable as luggage ... : wholly or in part of braid: of other textile materials, of man-made fibers, under item 706.3415, TSUSA, dutiable at the rate of 10 percent ad valorem. Articles which are classifiable under this provision and are the product of Taiwan are subject to the import restrictions of textile quota category 670.

Both the bottle suits and the can suit are in chief value of textile material, but are not in chief value of man-made fibers. The bottle suit with the logo is classifiable as articles not specially provided for, of textile materials: ... other articles ornamented: other, under item 386.1360, TSUSA, dutiable at the rate of 12.5 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B7

The bottle suit without the logo and the can suit are classifiable as articles not specially provided for, of textile materials: other, under item 389.70, TSUSA, dutiable at the rate of 6.5 percent ad valorem. It should be noted that the multi-colored textile strip on the can suit is functional in that it reinforces the seam. Accordingly, it is not considered to be ornamentation.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Area Director of Customs
6 World Trade Center
New York, New York 10048-0945

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-004659

This protest was filed against your decision in the liquidation on January 20, 1984, of entry No. 84-724109-3, dated December 2, 1983, covering a shipment of athletic footwear produced in South Korea.

This ruling concerns the correct classification of the athletic footwear.

FACTS:

The merchandise is described by the protestant's attorney as nylon and leather jogging shoes and other athletic footwear composed in part of leather.

The import specialist claims that the footwear, stock numbers 851, 751, 651, 861, 761, 873, 896 and 796, is classified under the provision for other footwear, other, other, in item 700.95, Tariff Schedules of the United States (TSUS). The import specialist has approved the protest in part with regard to stock numbers 850, 750, and 650, so these stock numbers are not at issue here.

The protestant's attorney claims that the footwear is in chief value of leather and is properly classified under the provision for footwear of leather (except footwear with uppers

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B9

of fibers), other, for men, youths and boys, in item 700.35, TSUS, or under the provision for footwear of leather, other, for other persons, other, in item 700.45, TSUS.

ISSUE:

Is the instant footwear in chief value of leather and classified in items 700.35, TSUS, and 700.45, TSUS, or is it in chief value of rubber and plastics and classified in item 700.95, TSUS?

LAW AND ANALYSIS:

The protestant's attorney claims that the imported footwear is classified in items 700.35, TSUS, and 700.45, TSUS, because the instant athletic footwear is in chief value of leather.

The import specialist requested component material value breakdowns for stock numbers 851, 751, 651, 861, 761, 873, 896, and 796 by a letter dated April 26, 1985. Neither the protestant nor his attorney has responded to this request.

Customs Headquarters Telex No. 10378 of October 15, 1984, stated that, if Customs requests information regarding component value breakdowns for footwear but does not receive the requested information, the merchandise should be liquidated under the higher duty rate. Following Telex 10378, stock numbers 851, 751, 651, 861, 761, 873, 896 and 796 are classified in item 700.95, TSUS.

HOLDING:

The protest is approved in part with regard to stock numbers 850, 750, and 650. The protest is denied in part with regard to stock numbers 851, 751, 651, 861, 761, 873, 896, and

UNITED STATES GOVERNMENT

Memorandum

DEPARTMENT OF THE TREASURY
UNITED STATES CUSTOMS SERVICE

DATE: OCT 21 1986

FILE: CLA-2 CO:R:CV:G
078693 jlj

Area Director of Customs
6 World Trade Center
New York, New York 10048

Dear Sir:

RE: Decision on Application for Further Review of Protest No. 1001-4-007488

This protest was filed against your decision in the liquidation on March 30, 1984, of entry No. 84-268621-3, dated February 23, 1984, covering a shipment of athletic footwear produced in South Korea.

This ruling concerns the correct tariff classification of the footwear.

FACTS:

The merchandise at issue is nylon/leather athletic footwear produced in South Korea. The protestant's broker claims that the footwear is in chief value of leather and that the exterior surface is in excess of 50 percent leather. He claims that the footwear should be classified under the provision for footwear of leather (except footwear with uppers of fibers), other, for men, youths and boys, in item 700.35, Tariff Schedules of the United States (TSUS), or under the provision for footwear of leather, other, for other persons, other, valued over $2.50 per pair, in item 700.45, TSUS.

The import specialist liquidated the footwear under the provision for other footwear, other, other, in item 700.95, TSUS.

ISSUE:

Is the footwear in chief value of leather and classified in items 700.35, TSUS, and 700.45, TSUS, or in chief value of rubber and plastic, and classified in item 700.95, TSUS?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

B12

LAW AND ANALYSIS:

In reviewing the manufacturer's component value breakdowns submitted with entry No. 84-268621-3, we note that the manufacturer allocated his stitching costs on the basis of his material costs. This method of allocating labor costs does not follow Customs Headquarters instructions, set forth in Legal Determination 81-0186 of December 16, 1981, that the "cost of stitching leather overlays onto the fabric uppers should be allocated among the materials comprising the uppers in proportion to their relative weights." (Emphasis added.)

Inasmuch as the stitching charges shown on the manufacturer's value breakdowns were calculated incorrectly (and cannot be calculated properly because we lack the weights of the materials comprising the uppers), they must be omitted. Without the stitching charges, we note that the following footwear styles with split leather overlays are in chief value for rubber and plastic:

Style No.	Leather Total	Rubber and Plastic Total
JOG 6543 (Invoice #1)	$0.573	$0.62
HOG 96542 (Invoice #1)	$0.573	$0.62
NOG 6420 (Invoice #1)	$0.961	$0.977
HOG 6277 (Invoice #2)	$0.702	$0.901

The above-mentioned styles are properly classified as other footwear in item 700.95, TSUS.

In accordance with Customs Headquarters telexes of April 25, 1984, and October 15, 1984, which concern chief value, the other footwear styles liquidated in item 700.95, TSUS, are classified as footwear of leather, in items 700.35, TSUS, and 700.45, TSUS, as applicable.

078693

B13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

HOLDING:

The protest is denied in part with regard to styles JOG 6543, HOG 96542, NOG 6420, and HOG 6277, which are classified as other footwear in item 700.95, TSUS. The protest is approved in part with regard to the other footwear styles involved in this protest, which are classified as footwear of leather, in items 700.35, TSUS, and 700.45, TSUS, as applicable. A copy of this decison should be sent to the protestant along with the CF 19 Notice of Action.

Sincerely,

William P. Schaffler

Area Director of Customs
New York Seaport
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-5-003098

This protest was filed against your decision in the liquidation on December 21, 1984, of entry No. 84-893927-8 dated July 5, 1984, covering a shipment of athletic footwear produced in Korea.

FACTS:

The men's leather/nylon athletic footwear involved was liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather which requires their classification under item 700.35, TSUS, as other footwear, of leather, for men, youths, and boys.

ISSUE:

Are the shoes in chief value of leather?

LAW AND ANALYSIS:

The claim that the shoes are in chief value of leather has not been substantiated. The protestant was requested on a CF 29 dated August 14, 1984, and in a letter dated September 5, 1984, to submit a component material breakdown.

c1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

The protestant has not responded to our requests for a component material breakdown. For this reason it is our view that classification of the shoes under item 700.95, TSUS, was appropriate.

HOLDING:

The protest should be denied. A copy of this decision should be attached to your Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

CLA-2 CO:R:CV:G
078703 JAS

078703

Ms. Martha J. Schoonover, Esq.
Fulbright & Jaworski
1150 Connecticut Avenue, N.W.
Washington, D.C. 20036

Dear Ms. Schoonover:

In your letter of July 22, 1986, you inquire as to the tariff classification of certain anchor plates, presumably from a country entitled to the column 1 rate of duty.

A submitted drawing depicts a flat stamped article of non-alloyed commercial quality steel, 7-1/4 inches long and 3-1/2 inches wide. Although snub nosed at the front, it is moderately tapered with two fin-like projections at the rear. It is designed to be attached to a fence post with rivets by means of three oval shaped holes along its length. The anchor permits the fence post to be driven into the ground and remains attached to the post.

You cite lexicographic definitions of "anchor" and "anchor plate," and conclude that the former is inclusive of the latter. Noting the statutory preference for an eo nomine classification over a possibly applicable classification under a "parts" proviso, you maintain that the provision for anchors, grapnels, and parts thereof, all the foregoing of iron or steel, in item 652.03, Tariff Schedules of the United States (TSUS), represents the proper classification.

We respectfully disagree with this position. The rule of noscitur a sociis is appropriate to clarify the scope of the term "anchor" by reference to "grapnel" appearing in the same line item. See Victor England Agencies, Inc. v. United States, 50 Cust. Ct. 83, C.D. 2394 (1963), and related cases. A grapnel is a grappling iron or hook primarily used to drag the bottom of a body of water and thereby secure or anchor a small boat. By design and function, the anchor plate under consideration is not the type of anchor classifiable in item 652.03, TSUS.

The anchor plate is not within the Schedule 6, Part 2, Subpart B, Headnote 3(h), TSUS, definition for Wire, as you alternatively maintain, because it has been fabricated beyond the enumerated processes in Schedule 6, Part 2, Headnote 1, TSUS, and, therefore, is not considered a basic shape or form of iron or steel, for tariff purposes.

C3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Customs has adopted the common meaning of the term "structure" enunciated in S.G.B. Steel Scaffolding & Shoring Co., Inc. v. United States, 82 Cust. Ct. 197, C.D. 4802 (1979). Moreover, the court, at pp. 214, 215, noted that Heading 73.21, Brussels Tariff Nomenclature, sufficiently parallels the corresponding TSUS provisions for structural units, structures and parts of structures, so as to be indicative of Congressional intent. Explanatory notes thereunder delineate, among other things, assembled railings and fencing, level crossing gates and similar barriers, and such parts as sheets and plates which have been prepared (e.g., drilled, bent or notched).

There is no specific tariff provision believed applicable to these anchor plates. Because there is every indication that by function and design the subject articles are chiefly used in metal fences, noting General Interpretative Rules 10(e)(i) and 10(ij), TSUS, respectively, the anchor plates are classifiable under the tariff provision for other structures and parts of structures, of iron or steel, in item 653.00, TSUS, dutiable at the rate of 6.2 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-008294

This protest was filed against your decision in the liquidation on April 6, 1984, of entry No. 84-268635-2 dated March 6, 1984, covering a shipment of athletic footwear manufactured in Korea.

FACTS:

The athletic footwear involved was liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Does the documentation provided show that the shoes are in chief value of leather?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions cost breakdowns must be accepted as accurate unless (1) the cost breakdown is incomplete, (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous, or (3) the

cs

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining component material of chief value.

With respect to those shoes covered by stock No. EOG-6543 a component material breakdown was not submitted. Therefore, classification under item 700.95, TSUS, was appropriate.

With respect to those shoes covered by stock Nos. NOG-96480 and POG-6480 the component material breakdowns submitted show that they are in chief value of plastics. Therefore, classification under item 700.95, was appropriate.

HOLDING:

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

For Harvey B. Fox
Director, Classification
and Value Division

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-0011741

This protest was filed against your decision in the liquidation on June 8, 1984, of entry No. 84-190643-7 dated April 6, 1984, covering a shipment of athletic footwear manufactured in Korea.

FACTS:

The leather/nylon joggers involved were liquidated under the provision for other footwear in item 700.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the shoes are in chief value of leather which requires their classification under the provision for leather footwear in item 700.35, TSUS, or item 700.45, TSUS, depending on gender and value per pair.

ISSUE:

Do the breakdowns submitted by the protestant show that the footwear is in chief value of leather?

LAW AND ANALYSIS:

In T.D. 78-195, the Customs Service stated that in accordance with cited judicial decisions cost breakdowns must be accepted as accurate unless (1) the cost breakdown is

c1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

incomplete, (2) the Customs Service has evidence in its possession that the cost breakdown is erroneous, or (3) the cost breakdown is so patently inaccurate on its face that Customs officers have both reason and cause to look to other reasonable factors in determining component material of chief value.

The thrust of the instructions set forth in our telexes dated April 25 and October 15, 1984, on the matter was that importer submitted data need not be accepted if there is tangible evidence that it is false. "Tangible evidence" was stated to include findings contained in laboratory analysis reports, investigation reports and like reports or responses.

With respect to those shoes covered by Invoice No. 1, the amount of leather claimed to be present appears to be overstated. However, in the absence of a laboratory report as to the amount of leather actually present in the shoes, we have no "tangible evidence" to refute the claim that that shoes are in chief value of leather.

With respect to those shoes covered by Invoice No. 2, the component material breakdowns submitted clearly show that they are in chief value of rubber/plastics. Consequently, classification under item 700.95, TSUS, was appropriate.

Thomas Hoover, Esq.
Dennison Manufacturing Company
300 Howard Street
Framingham, Massachusetts 01701-0344

Dear Mr. Hoover:

In your letter of July 7, 1986, you state that Dennison is the manufacturer and seller of "Glue Sticks" similar to the sample importations which you submitted. You request the classification, rate of duty and appraised value of the imported merchandise pursuant to section 516, Tariff Act of 1930, as amended.

The glue-stick, which is an adhesive dispensed from a cylindrical tube, is in a plastic cylinder about 3 inches high, with circumference of about 1/2 inch. To use the glue-stick, the cap is removed and the base twisted to expose the glue which is rubbed on the surface to be sealed.

Merchandise of this type is classifiable under the provision for cements, not specially provided for, in item 494.60, TSUS, with a column 1 rate of duty of 2.2 percent ad valorem.

Products of South Korea classifiable in item 494.60, TSUS, are entitled to duty-free treatment under the Generalized System of Preferences.

Sincerely,

26 SEP 1986

078729

Mr. George F. Jahn, Jr.
WearEver Proctor Silex
2209 Sulphur Spring Road
Baltimore, Maryland 21227-2988

Dear Mr. Jahn:

In your letter of May 8, 1986, to the Regional Commissioner of Customs, New York Seaport, you inquire as to the tariff status of a battery operated beater/mixer with accessories, and related equipment, from Hong Kong. A sample was submitted.

The sample is a hand-held cordless beater/mixer with self-contained electric motor that is powered by a rechargeable nickle-cadmium battery. It comes with five different mixing, blending or whipping tools and a plastic wall mounting bracket to hold and store the tool attachments. Merchandise represented by the sample would be classifiable under the tariff provision for food mixers with self-contained electric motors, of types used in the household, in item 683.32, Tariff Schedules of the United States (TSUS), dutiable at the rate of 4.4 percent ad valorem. The five tools are considered an entirety with the mixer and likewise classifiable. The mounting bracket is classifiable under the provision for other household articles not specially provided for, of rubber or plastics, in item 772.15, TSUS, dutiable at the rate of 4 percent ad valorem. The nickel-cadmium battery is specifically provided for and, therefore, separately classifiable under the provision for other storage batteries, in item 683.15, TSUS, dutiable at the rate of 5.5 percent ad valorem.

Also included with the beater/mixer is a charging unit or plug-in power supply and a plastic wall mounting bracket with male and female electrical connectors. These act as an electrical interface to permit the charging unit to recharge the battery when the mixer is not in use. The craddle of the mounting bracket permits storage for the mixer, but this is believed to be a subsidiary feature. The charging unit is classifiable under the tariff provision for transformers rated at less than 1 kva, in item 682.05, TSUS, dutiable at the rate of 7.3 percent ad valorem. The electrical interface, because of its specific design and function, is classifiable under the provision for other electrical apparatus for making or breaking

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

C11

electrical circuits, for the protection of electrical circuits, or for making connections to or in electrical circuits, in item 685.90, TSUS, dutiable at the rate of 5.7 percent ad valorem.

Articles from Hong Kong classifiable in items 682.05, 683.32, 685.90, and 772.15, TSUS, are eligible for entry free of duty, under the Generalized System of Preferences (GSP), upon compliance with applicable law and regulations relating thereto. Copies of these provisions are enclosed.

Sincerely,

Arthur P. Schifflin
Chief, General
Classification Branch

Ms. Chari Hoffman
Pagoda Trading Company Inc.
44 Kimler Drive
St. Louis, Missouri 63043

Dear Ms. Hoffman:

Your letter dated April 15, 1986, addressed to our New York office concerning the tariff classification of a woman's embroidered plastic pump manufactured in Taiwan, has been referred to this office for a direct reply to you. A sample was submitted for examination.

The sample designated as style No. 54495W has a polyurethane upper with decorative embroidery designs on one side of the upper.

The classification of the sample will probably depend on how much of the exterior surface area of the upper is covered by the stitching. For example, the embroidered design on the upper of the sample shoe consists of parallel lines of stitching with a matching color thread so that, while the stitch lines are only about 1/32 inch apart, they still leave a sizeable portion of the plastic exterior surface area within the design area. It is our opinion that even though this embroidery is not, strictly speaking, filled in, it would be too difficult for a customs laboratory to measure accurately the uncovered areas within the design and that this design more closely resembles solid, filled in embroidery rather than open, outline embroidery.

Based on the assumption that the embroidery design occupies at least 10 percent of the exterior surface area of the upper, the sample is classifiable under the provision for footwear of the slip-on type that is held to the foot without the use of laces or buckles or other fasteners in item 700.59, Tariff Schedules of the United States, and dutiable at the rate of 37.5 percent.

Sincerely,

Arthur P Schaffner

078736

Mr. Rolando A. Perez
Vice President
Gator Industries, Inc.
1000 South East 8th Street
Hialeah, Florida 33010

Dear Mr. Perez:

In your letter of April 3, 1986, you requested a tariff classification for a cotton canvas footwear upper made in Taiwan. You enclosed two samples uppers along with your letter; one was retained in New York, and one was forwarded to this office. Later you submitted two samples of a second upper; both samples were forwarded to this office.

The first upper is constructed of a white woven outside fabric backed with laminated foam and a nylon tricot knit inner fabric. There are six pairs of eyelets in the tongue area for closure purposes. There is an additional piece of cotton material sewn onto the upper at either side, which starts at the eyelets and curves to the rear heel counter. It is wide at the beginning but narrows near the counter. There is a cut in the main fabric underneath this additional material, which is stitched together. In addition, there are rows of white stitching on either side which start at the bottom and curve up through the mustache in the heel area. The stitching is sewn through the main laminated fabric of the upper. The stitching begins with four rows at the bottom. At the cut in the upper, the stitches become two rows which continue to the mustache. The stitches then pass underneath the curved piece of material. You have marked in ink the word "reinforcement" on the additional piece of material.

The issue is whether the additional curved piece of material and the curved stitching constitutes ornamentation. You state that the Miami import specialist tentatively advised you that the upper was classified under the provision for articles not specially provided for, of textile materials, other articles, not ornamented, of cotton, other, shoe uppers, in item 386.52, Tariff Schedules of the United States (TSUS).

In a telephone conversation with our New York office, your sales representative said that the additional pieces of material are reinforcements; he stated that they also add a design to the shoe. He said that the cuts in the upper enable the manufacturer to work the upper.

C14

RELEASED TO THE PUBLIC

On the first upper submitted, the additional curved overlay piece of material does not constitute ornamentation because it reinforces the strength of the upper at a point which would receive a great deal of stress when the shoe is tied. The functional aspect of the overlay outweighs any decorative aspect it may have.

The rows of curved stitching through the laminated fabric portion do not constitute ornamentation. United States v. Endicott Johnson Corporation, 67 CCPA 47, C.A.D. 1242 (1980), found that non-contrasting white stitching was not conspicuous and hence not ornamental. Following Endicott Johnson, supra, we find that the rows of curved stitching are not ornamental.

The first sample upper is not ornamented. It is classified under the provision for articles not specially provided for, of textile materials, other articles, not ornamented, of cotton, other, shoe uppers, in item 386.5210, Tariff Schedules of the United States (TSUS), dutiable at the rate of 8.2 percent ad valorem. Textile category number 369 applies.

In a letter dated June 27, 1986, you submitted two samples of a second footwear upper. The second upper differs from the first upper in the following ways:

(1) The vinyl top on the outside of the heel counter has been replaced with a textile top.

(2) The curved stitching on the side panels has been eliminated.

(3) A fabric binding has been sewn over the seam on the inside to add more strength.

(4) The location of the seam has changed. On the second sample, the seam runs along the bottom of the overlay, while on the original sample, the seam ran along the center of the overlay.

The issue for the second sample is whether the additional piece of curved overlay ornaments the upper. Inasmuch as the curved overlay reinforces the strength of the upper at a point which would receive a great deal of stress when the shoe is tied, the curved overlay does not constitute ornamentation. The binding added to the inside of the upper serves to reinforce the seam; it does not constitute ornamentation either.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D'

079736

The second sample is not ornamented. It is also classified in item 386.5210, TSUS, dutiable at the rate of 8.2 percent ad valorem. Textile category number 369 applies.

We note that there may be a question of trademark similarity concerning the first sample upper submitted. We have referred a copy of your letter to the Entry, Licensing and Restricted Merchandise Branch, which will respond to the trademark question in a separate letter.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

CLA-2 CO:R:CV:G
078745 DW

William J. Maloney, Esq.
Rode & Qualey
295 Madison Avenue
New York, New York 10017

Dear Mr. Maloney:

You have requested a ruling on the country of origin of certain garments. Samples of both the knit-to-shape components and the completed garments were submitted along with your letter dated July 31, 1986.

Our ruling will cover the three sample garments comprising two skirts and a sweater. You have indicated that the yarn usually will be of United Kingdom origin, but also may be sourced in third countries. In each case, all of the component parts will be knit -shape in the United Kingdom. The sweater parts consist of f it and back panels, arms, collar and a pocket patch. The omponents of skirt A are composed of a front panel, back panel and waistband, and the components of skirt B consist of a one-piece knit tube and a waistband. All components will be shipped to the People's Republic of China where the parts will be joined together by looping and linking. You further state that some of the garments assembled in China will be sent to Hong Kong where they will be dyed.

Since these garments are processed in more than one country, they are subject to the provisions of section 12.130 of the Customs Regulations (19 CFR 12.130). The regulations provide that in determining the country of origin of textiles and textile products that consist of materials produced or derived from, or processed in, more than one country, the imported article is considered to be a product of that country where it last underwent a substantial transformation. A textile or textile product is considered to have undergone a substantial transformation if it has been transformed by means of substantial manufacturing or processing into a new and different article of commerce.19 CFR 12.130(b).

These regulations require us to consider certain criteria in ascertaining whether the merchandise has undergone substantial manufacturing or processing operations. These include the physical change in the material or article, time involved, complexity of the operations, degree of skilled labor and value added to the article.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D3

The principles contained in the regulations originate from our interpretation of the test of substantial transformation set out in various court cases, particularly, the landmark case of Uniroyal, Inc.v. United States, 3 CIT 220, 542 F. Supp. 1026, 702 F. 2d 1022 (1982), in which the court stated that a substantial transformation will occur from processing that results in an article having a name, character or use differing from that of the imported article. The same court recognized that a substantial transformation will not result from minor processing which leaves the identity of the imported article intact. Uniroyal, at p. 224.

With specific reference to the country of origin of garments whose components are knit-to-shape in one country and assembled in another country, our position has been that usually the assembly into a completed garment of knit-to-shape component parts does not constitute a substantial transformation. 19 CFR 12.130(e)(2)(iii). Generally, we regard such assembly operations as minor based on considerations of complexity, time, and degree of skill.

The garments in issue have been assembled in China from components that are knit-to shape in the United Kingdom. In each case, the essence of these garments stems from the knitting of the panels in the United Kingdom. The assembly of these components by looping and linking that occurs in China does not result in a substantial transformation so as to effect a change in the country of origin. We note, too, that under 19 CFR 12.130(e)(v), dyeing the garments in Hong Kong will not result in a change in the country of origin.

For these reasons, the country of origin of the submitted garments is the United Kingdom. As products of the United Kingdom, these garments may be entered into the United States free from any quantitative restrictions. This determination is consistent with several rulings issued by Customs concerning the country of origin of knit-to-shape garments that are processed in more than one country. On each occasion, we have ruled that the country of origin of the completed garment is the country where the components are knit. See, for example, file 074658 of September 27, 1984, and file 075692 of May 2, 1985.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

819221

Mr. Fred Goris
International Traffic
Fisher-Price
636 Girard Avenue
East Aurora, New York 14052-1885

Dear Mr. Goris:

Your letter dated June 13, 1986, addressed to our New York office concerning the tariff classification of a "Miniature Bread Bag" produced in Mexico, has been referred to this office for a direct reply to you. A sample was submitted for examination.

The sample is a small duffle style pouch made of polyester which measures approximately 9 inches in height with a 3 inch base. It has one central compartment which is secured by a drawstring closure. The finished article will have flowers and the word "Bread" imprinted on it. You state that after importation the article will be incorporated into a playset and marketed as a child's plaything.

The issue involved is whether the article is within the purview of the term luggage for tariff purposes or whether it is considered a flat good.

Schedule 7, Part 1, Subpart D, Headnote 2(a)(i), Tariff Schedules of the United States (TSUS), provides that "the term '<u>luggage</u>' covers - (i) travel goods, such as trunks, hand trunks, lockers, valises, satchels, suitcases, wardrobe cases, overnight bags, pullman bags, gladstone bags, traveling bags, knapsacks, kitbags, haversacks, duffle bags, and like articles designed to contain clothing or other personal effects during travel."

Schedule 7, Part 1, Subpart D, Headnote 2(c), TSUS, states that "the term '<u>flat goods</u>' covers small flatwares designed to be carried on the person, such as banknote cases, bill cases, billfolds, bill purses, bill rolls, card cases, change purses, cigarette cases, coin purses, coin holders, compacts, currrency cases, keycases, letter cases, license cases, powder cases, spectacle cases, stamp cases, vanity cases, tobacco pouches, and similar articles."

THIS DOCUMENT MAY BE RELEASED TO THE

DS

This headnote explains that the term 'flat goods' covers "small flatwares designed to be carried on the person," and lists a number of exemplars that are commonly carried in this manner. It is our view that the instant merchandise is not the type of article which is "designed to be carried on the person." It is in fact designed and used to contain personal effects while traveling.

In view of the foregoing, it is our opinion that merchandise represented by the sample is classifiable under the provision for luggage of other textile materials in item 706.41, TSUS, and dutiable at the rate of 20 percent ad valorem.

Sincerely,

Arthur P. Schaffner
for Harvey B. Fox

Ms. Sandy Leawprasert
TP & M Overseas Corp.
500 Ivy, Apt. 3
Glendale, California 91204

Dear Ms. Leawprasert:

You requested a tariff classification for a cotton cologne towelette produced in Thailand. You submitted a sample with your letter.

The sample towelette is manufactured from a plain woven cotton material which has been napped. The item is impregnated with cologne and measures approximately 7-7/8 inches by 6-1/2 inches. Its edges are not turned and sewn to prevent raveling.

You suggest classification under the tariff provision for cosmetics and other toilet preparations, containing alcohol, in item 461.45, Tariff Schedules of the United States (TSUS), or under the provision for articles not specially provided for, of textile materials, other articles, not ornamented, of cotton, pile or tufted construction, other, in item 386.40, TSUS.

The cologne is an inexpensive preparation and would not be the component material of chief value in the article. The cotton cologne towelette is classified under the provision for articles not specially provided for, of cotton, in item 386.40, TSUS, dutiable at the 1986 Column 1 rate of 9.4 percent ad valorem.

The Harmonized Commodity Description and Coding System (HS) is scheduled to replace the TSUS as the tariff code of the United States on January 1, 1988. For your information, the HS provision applicable to the above-described merchandise appears to be Subheading 6307.90.80, other made up textile articles. This information is intended to assist you in becoming familiar with HS tariff classifications. It is not an official Customs Service ruling and may not be challenged by you at this time. It is anticipated that we will begin issuing HS tariff classification rulings on or about July

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

CLA-2 CO:R:CV:G
078775 JLJ

Area Port Director of Customs
P.O. Box 280
Pacific Highway Station
Blaine, Washington 98230

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3004-5-000189

This protest was filed against your decision in the liquidation on May 3, 1985, of entry No. 869450, dated November 29, 1984, covering a shipment of Arbrene lumber wraps produced in Canada.

This ruling concerns the correct tariff classification of the lumber covers.

FACTS:

The merchandise at issue is described by a descriptive brochure as "Arbrene lumber wrap for kiln-dried lumber shipment and storage." According to the brochure, it is a "new woven polyolefin lumber wrap."

The protestant's broker claims that the lumber wrap is a container and is classified under the provision for containers, of rubber or plastics, with or without their closures, chiefly used for the packing, transporting, or marketing of merchandise, in item 772.20, Tariff Schedules of the United States (TSUS).

The import specialist claims that the lumber covers are not containers because they are protective covers which do not "contain" lumber. The entry was liquidated under the provision for articles not specially provided for, of rubber or plastics, other, other, in item 774.55, TSUS.

ISSUE:

Is Arbrene lumber wrap a container classified in item 772.20, TSUS, or an article of rubber or plastic classified in item 774.55, TSUS?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D9

LAW AND ANALYSIS:

A memorandum from the Deputy Assistant Regional Commissioner, C&V, Pacific Region, dated November 18, 1985, indicates that she thinks that a conflict exists between ORR Ruling 77-0057 of September 20, 1977 (Customs Headquarters Ruling Letter (HRL) 044129 of September 30, 1976) and New York letter 812574 of March 4, 1985.

HRL 044129 ruled on lumber covers made from woven strips which were laminated on one side only with clear plastic film. The covers were also reinforced near one edge with a band made from woven strips coated with a milky white plastic film. Inasmuch as the strips in the band could be seen through the coating, Headnote 5 (now 5a), Schedule 3, TSUS, applied neither to the band portion nor to the balance of the cover, which was clear coated. Therefore, Type I (rolls with precut holes) and Type II (finished covers with sewn ends) were both held to be textile articles classified in Schedule 3, TSUS.

New York letter 812574 concerned bags used to pack, transport and market plastic resins, which were actually containers for tariff purposes. They were made from woven strips which were laminated with non-transparent white plastic film. By virtue of Headnote 5(a), Schedule 3, TSUS, they were held to be plastic containers.

The above-mentioned rulings do not conflict. What they have in common is a consideration of whether or not the coatings or laminations are nontransparent. (At this point, we note that neither the sample lumber wrap nor the two photographs mentioned by protestant's broker on the Customs Form (CF) 19 were received in New York or in this office. The national import specialist in New York examined a sample swatch forwarded on the CF6431 report for the protested entry. He found that the swatch was coated or laminated with a nontransparent plastic. The sample swatch was forwarded to but not received by this office.)

HRL 044129 and New York letter 812574 differ in that the lumber covers in HRL 044129 had clear coats with bands of reinforcing material which were coated with a milky white plastic through which the base fabric of woven strips could actually be seen, as opposed to the bags in New York letter 812574 in which the lamination was nontransparent. It cannot be assumed that the coatings in HRL 044129 and New York letter 812574 were the same. The fact that one ruling dealt with a container coated or laminated with nontransparent plastic while the other concerned an article, not specially provided for, which was not coated with a nontransparent plastic does not mean that the rulings conflict. Each is correct based upon its specific set of facts.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D10

078775

The protestant's broker's arguments are mostly lexicographical. We disagree with his contentions that a bag is comparable to a lumber wrap. The subject lumber wrap is used as a lumber cover. It is our understanding that the lumber is not placed into the subject cover. Instead, the wrap is put over the top of the stacked lumber and is then secured for shipment. Item 772.20, TSUS, does not apply to protective covers which do not contain the merchandise. The lumber wrap is actually a specialized form of tarpaulin, not a container.

For the above-mentioned reasons, we find that the instant lumber wraps are classified under the provision for articles of rubber or plastics, in item 774.55, TSUS.

HOLDING:

The instant lumber covers are classified in item 774.55, TSUS. The protest should be denied in full. A copy of this decision should be attached to the CF 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification and Value Division

Mr. D. S. Rana
Commercial Attache
Embassy of India
2536 Massachusetts Avenue, N.W.
Washington, D.C. 20008

Dear Mr. Rana:

You have asked us to review the classification by Customs officials at JFK Airport of certain garments imported from India by West End Blues, Inc. You state that they are men's undershorts and pajamas, whereas they were classified as women's garments.

The three submitted samples are of a woven cotton fabric in white, with red flowers and green and blue leaves. The shorts have an elasticized waistband that does not open and a two-button front fly. A white textile label at the center front is bordered decoratively in red and black; its stylized letters spell out "Tony Tango." This feature ornaments the garment. The pants are the same as the shorts except for the length and a pocket set into each side seam. The legs are very narrow at the lower edges. The short-sleeved shirt has a full-front left-over-right five-button opening, a single breast pocket on the left side, and a long, rounded shirt tail at the back.

Headnote 2(c) of Part 6, Schedule 3, Tariff Schedules of the United States, provides:

> 'women's and girls' wearing apparel' is wearing apparel for females over 6 years of age, including wearing apparel commonly worn by either sex and not identifiable as being intended exclusively for the wear of men or boys.

The articles in question here fall within this headnote description. They are not intended exclusively for the wear of men or boys, but rather are commonly known, marketed, and used as sportswear and are associated with the female sportswear trade. The floral design of all three garments, the long

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D13

lower back edge of the shirt, and the narrow pants legs are fashion features that particularly indicate that the garments are unisex or women's. We also note that the importer is identified as a sportswear firm and carries only a limited line that can be described as exclusively men's apparel.

The shirts fall within quota category 341; the pants and shorts, within category 348. Your samples are returned.

Sincerely,

For Harvey B. Fox

Mr. Jack Shamash
J. Shamash & Sons Inc.
42 West 39th Street
New York, New York 10018

Dear Mr. Shamash:

You have requested the country of origin of certain greige goods from China that are sent to West Germany for further processing.

Once the greige goods arrive in Germany, they are bleached, printed with from three to six screens, steamed, washed, resin finished and calendarized.

Under section 12.130(b), Customs Regulations, a textile or textile product which is processed in more than one foreign territory or country is a product of that territory or country where it last underwent a substantial transformation. A textile or textile product is considered to have undergone a substantial transformation if it has been transformed by means of substantial manufacturing or processing into a new and different article of commerce.

Our regulations further provide that a fabric usually will be a product of the country where it is dyed and printed and subjected to two of the following finishing operations: bleaching, shrinking, fulling, napping, decating, permanent stiffening, weighting, permanent embossing, or moireing. Section 12.130(e)(i), Customs Regulations.

The information submitted indicates that the fabric is not dyed in West Germany. Dyeing is essential to a finding that the fabric has undergone a substantial transformation. Thus, it is our judgment that the finishing of the fabric in West Germany is not sufficient to result in a change in the country of origin of the merchandise. Accordingly, the fabric remains a product of China.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Harry Bank
Sugihara Trading of California, Inc.
P.O. Box 66275
Los Angeles, California 90066

Dear Mr. Bank:

You have requested a tariff classification ruling for scaffolding hooks imported from Taiwan. Such hooks are components of scaffolding systems used in construction areas.

Scaffolding systems and their parts, of base metal, are classifiable as other structures and parts thereof under item 653.00, Tariff Schedules of the United States (TSUS), a provision allowing duty-free treatment for qualifying articles from Taiwan. The Customs Court, in S. G. B. Steel Scaffolding & Shoring Co., Inc. v. United States, 82 Cust. Ct. 197, C.D. 4802 (1979), noted that scaffolding is included within both the common meaning and the Brussels Tariff Nomenclature meaning of "structures." In following this decision, we have ruled that adjustable screw jacks for scaffolding, for example, are parts of structures under item 653.00, TSUS. See file 074401 of July 19, 1984.

We note, however, that you have requested a ruling on a matter that is not prospective but the subject of a current customs transaction. Technically, to do so is in contravention of the Customs Regulations. We caution that the Internal Advice procedures spelled out in section 177.11 of the Regulations, 19 CFR 177.11, should be used in the future when disputes arise with regard to current transactions. Alternatively, once entries have been liquidated, the Regulations covering protests, Part 174, apply.

Sincerely,

Arthur P. Schaffer

Mr. Bill Holmes
President
Upstream Products
209 Highland Avenue
Piedmont, California 94611

Dear Mr. Holmes:

Your letter dated May 1, 1986, addressed to our New York office concerning the tariff classification and marking of liquid containers from Korea, Taiwan, and Thailand, has been referred to this office for a direct reply to you. Samples were submitted for examination.

The sample containers have plastic liners and are made of woven man-made fiber fabric. Two of the samples have velcro closures and measure approximately 5-1/2 inches by 11 inches. One has shoulder clasps and is not ornamented. The other has shoulder straps attached and is ornamented by means of a sewn on label bearing the importer's name and address. The remaining container has a camouflage print and measures approximately 8-1/4 inches by 11-1/2 inches with zipper closures and shoulder straps. It has an open ended pocket on the rear for insertion of one's hands in the cold weather.

If the liquid containers are in chief value of man-made fibers, the unornamented ones would be classifiable under the provision for articles, not specially provided for, of textile materials, not ornamented, of man-made fibers in item 389.6270, Tariff Schedules of the United States Annotated (TSUSA), and dutiable at the rate of 4 cents per pound plus 10 percent ad valorem.

The ornamented liquid container would be classifiable under the provision for articles not specially provided for, ornamented, of man-made fibers in item 386.1343, TSUSA, and dutiable at the rate of 12.5 percent ad valorem.

If the liquid containers are in chief value of plastics, they would be classifiable under the provision for other articles chiefly used for preparing, serving, or storing food or beverage ingredients, of plastics in item 772.1500, TSUSA, and dutiable at the rate of 4 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E3

Merchandise classifiable under items 386.1343 and 772.1500, TSUSA, which are products of Korea or Thailand are entitled to duty-free treatment under the Generalized System of Preferences, if otherwise qualified.

With respect to country of origin marking, the law requires that each imported article produced abroad be marked in a conspicuous place as legibly, indelibly, and permanently as the nature of the article permits, with the English name of the country of origin, to indicate to the ultimate purchaser in the United States the name of the country in which the article was manufactured or produced.

As you propose, a separate sewn-in label alongside the instruction label inside the bag that reads "Made in Korea" is an acceptable marking.

However, we note that one of the liquid containers has a rectangular patch with your company name and mailing address imprinted thereon. The law provides that when the name of a locality other than the country of origin appears on a product "there shall appear, legibly and permanently, in close proximity to such words, letters or name, and in at least a comparable size, the name of the country of origin preceded by "Made in," "Product of," or other words of similar meaning."

Your question regarding labels which identify materials used in the product should be directed to the Federal Trade Commission, Washington, D.C. 20580.

Your samples are being returned under separate cover.

Sincerely,

John T Rick

Mr. Mark Beran
Alcohol USA Inc.
P.O. Box 629
Niwot, CO 80544

Dear Mr. Beran:

Your letter, which was postmarked August 12, 1986, concerns the dutiable status of fuel grade anhydrous ethanol from Panama. The sugar cane will be of Panamanian origin and the ethanol production facility located in Panama. If the regulations (enclosed) are complied with, importations of such ethanol would be free of duty under the CBI.

Otherwise fuel grade anhydrous ethanol is classifiable, if imported to be used for fuel purposes, in items 427.88/901.50, TSUS, dutiable at the rate of 3 percent ad valorem plus 60 cents per gallon.

As to denaturing the alcohol subsequent to importation, this would be done in a distilled spirits plant. However, for specific instructions on how this may be accomplished it is suggested that you write to the Office of Compliance Operations, Bureau of Alcohol, Tobacco and Firearms, 1200 Pennsylvania Avenue, N.W., Washington, D.C. 20226.

Enclosed is a copy of "Importing to the United States," which will provide additional information on the "logistics of importing."

Sincerely,

Harvey B. Fox

Area Director of Customs
6 World Trade Center
New York, New York 10048-0945

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-4-015874

This protest was filed against your decision in the liquidation on July 27, 1984, of entry No. 83-388965-0, dated September 26, 1983, covering a shipment of athletic footwear produced in Taiwan.

This ruling concerns the correct classification of the athletic footwear.

FACTS:

The merchandise at issue is athletic footwear produced in Taiwan. The protestant's counsel claims that the footwear is in chief value of leather and is classified under the provision for footwear of leather (except footwear with uppers of fibers), other, for men, youths, and boys, in item 700.35, Tariff Schedules of the United States (TSUS).

The entry was liquidated under the provision for other footwear, other, other, in item 700.95, TSUS.

LAW AND ANALYSIS:

Protestant's counsel claims that the athletic footwear at issue is in chief value of leather and is classified in item 700.35, TSUS. She claims that component value breakdowns attached to the entry show that the footwear is in chief value of leather. She asks that we do not decide the question presented by this protest until she furnishes us with detailed

THIS DOCUMENT MAY BE RELEASED TO THE

E7

additional value breakdowns in support of the protestant's position. (This request was made on October 23, 1984, however, and no additional breakdowns have been filed with this protest. In view of the length of time allowed already, we must decide the protest without any additional documentation.)

The component value breakdowns submitted with the entry show that Style 2471 on Invoice 1 and Style 2245 on Invoice 2 are in chief value of rubber and plastics. These styles are classified as other footwear in item 700.95, TSUS.

The New York commodity team indicates that all the other styles covered by the instant entry are in chief value of leather and are classified in item 700.35, TSUS.

HOLDING:

This protest is denied in part with regard to Style 2471 on Invoice 1 and Style 2245 on Invoice 2, which are classified in item 700.95, TSUS. This protest is approved in part with regard to all the other styles covered by this entry, which are classified in item 700.35, TSUS. A copy of this letter should accompany the CF 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffin

District Director of Customs
610 South Canal Street
Chicago, Illinois 60607

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3901-4-000729

This protest was filed against your decision in the liquidation on April 27, 1984, of entry no. 84-672943 dated October 7, 1983, entry No. 83-737250 dated September 28, 1983, entry No. 83-737244 dated September 27, 1983, entry No. 84-672925 dated October 4, 1983, and entry No. 83-737159 dated September 22, 1983, covering shipments of "magic eggs" produced in Taiwan.

FACTS:

The merchandise involved consists of clear egg containers with foam creatures. When the creatures are placed in water, they expand to 100 times their original size. When removed from the water, and allowed to dry, they will return to their original size.

The "magic eggs" were liquidated under the provision for other toys, and parts of toys, not specially provided for in item 737.95, Tariff Schedules of the United States (TSUS).

The protestant maintains that the merchandise should have been classified under the provision for magic tricks and practical joke articles in item 737.65, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E9

ISSUE:

1. Does the merchandise place one at a humorous disadvantage so as to qualify as a practical joke item?

2. Will the "magic eggs" be used as part of a performance of magic?

LAW AND ANALYSIS:

In order to qualify for classification under item 737.65, TSUS, as a practical joke article, it must be shown that the "magic eggs" are chiefly used to place an individual at a humorous disadvantage. See Parksmith Corp. v. United States, 67 Cust. Ct. 405, C.D. 4304 (1971).

It is our observation that an individual might be amused by the creature's growth, but he is not placed at a humorous disadvantage. Also, the "magic eggs" are not within the purview of the provision for magic tricks. There has been no evidence submitted to indicate that the merchandise would be included as part of a performance of magic.

In view of the foregoing, it is our position that classification of the merchandise under item 737.95, TSUS, was appropriate.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

ATTN: Brigitte Dapelo

Dear Ms. Dapelo:

Your letter dated July 11, 1986, addressed to our New York office concerning the dutiable status of a lady's handbag, has been referred to this office for a direct reply to you. A sample was submitted for examination.

The sample, style No. 1222HL produced in the People's Republic of China, is a tote bag composed of man-made fiber and measures approximately 11 inches by 16.25 inches by 2.88 inches. It contains a zippered central compartment and a small interior purse-like pouch secured with a nylon zipper closure. The bag has a front exterior snap closure and open pockets upon which are imprinted "House of Lloyd," and "toys and gifts" respectively. There are also double self-material handle straps for easy carrying.

The issue presented is whether the sample bag is considered luggage for tariff purposes or is considered a handbag.

Schedule 7, Part 1, Subpart D, Headnote 2(b), Tariff Schedules of the United States (TSUS), provides that "the term '<u>handbags</u>' covers pocketbooks, purses, shoulder bags, clutch bags, and all similar articles, by whatever name known, customarily carried by women or girls, but not including luggage or flat goods as defined herein or shopping bags; ***."

Although the bag in issue has dimensions exceeding the dimensions set forth in the published guidelines for handbags and would be considered luggage if the guidelines were strictly construed, it is our opinion that it is of a class or kind of articles which are similar to the pocketbooks, purses and shoulder bags which have been defined as handbags.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E12

In view of the foregoing, it is our position that the sample bag is classifiable under the provision for handbags of other textile materials in item 706.4125, TSUS, and dutiable at the rate of 20 percent ad valorem. The applicable textile quota category number is 670. As a product of the People's Republic of China this merchandise is not currently subject to visa requirements or quota restraints.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

819987

Gerald B. Horn, Esq.
Soller, Singer & Horn
Attorneys at Law
No. 10 The MEWS
421 Hudson Street
New York, New York 10014

Dear Mr. Horn:

Your letter addressed to our New York office dated August 5, 1986, concerning the tariff classification of a LCD watch-lighter manufactured in Taiwan, has been referred to this office for a direct reply to you. A sample was submitted for examination.

The sample is a battery operated solid-state electronic wristwatch with a digital LCD display in combination with a refillable butane gas cigarette lighter.

The lighter portion is in a plastic case with a stainless steel back. The watch module portion slides into a channel in the bottom section of the plastic case. A rubber watch strap is attached to the case by means of spring bars customarily found on watches.

The flame hole for the lighter is located at the top left of the case. A flame adjusting screw and gas filler is at the right side and the ignition lever is at the lower left side. Time display and time setting switches (S1 and S2) are located to the right of the LCD display. Access to the watch battery is obtained by sliding the module out of the case.

It has been suggested that the merchandise is classifiable under the provision for other cigar and cigarette lighters (including articles in which lighters are incorporated as significant integral parts), valued over $5 per dozen pieces in item 756.06, Tariff Schedules of the United States (TSUS).

Classification of the instant combination article under item 756.06, TSUS, is precluded by virtue of the inferior heading preceding item 756.06, TSUS, which limits the provision to lighters which are ordinarily carried in pockets or handbags. Inasmuch as the combination article is worn on the wrist, it will not be carried in the pocket or in a hangbag.

E14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

The merchandise is not classifiable under the provision for solid state electronic watches in item 688.36, TSUS, because the combining of the watch and lighter makes it more than an electronic watch.

In view of the foregoing, it is our opinion that the sample LCD watch lighter is classifiable under the provision for other electrical articles and electrical parts of articles, not specially provided for in item 688.42, TSUS, and dutiable at the rate of 4.1 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Jan Berry
Designs International
of Palm Beach Inc.
Grove Centre
Suite 302
21301 Powerline Road
Boca Raton, Florida 33433

Dear Mr. Berry:

In a letter dated August 25, 1986, you inquired as to the dutiable status of an area rug manufactured in Swaziland.

The area rug is said to be manufactured of 100 percent wool yarns that have been hand-loomed into a rug with self fringe. A photograph has been provided but we cannot determine whether the rug is flat woven or of pile or tufted construction. For the purpose of this reply we assume that it is flat-woven.

You have enclosed a letter from the Swaziland Ministry which you claim confirms that the rug is hand-loomed and the designs are based on Swazi folklore and ethnic concepts. Therefore, you suggest that the area rug is classifiable under the provision for floor coverings not specially provided for, of textile materials: of wool: woven, but not made on a power driven loom: valued over 30 cents per square foot: certified hand-loomed and folklore products in item 361.43, Tariff Schedules of the United States (TSUS), and entitled to duty-free treatment under the Generalized System of Preferences (GSP), if otherwise qualified.

Before an article can be classified as a hand-loomed and folklore product, the requirements of Schedule 3, Headnote 6, TSUS, copy enclosed, must be satisfied. Inasmuch as there is no certification as required by the headnote, item 361.43, TSUS, cannot apply.

It is our position that the area rug is classifiable, assuming that it is valued at over 30 cents per square foot, under the provision for other floor coverings not specially

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F2

provided for, of textile materials, of wool: valued over 30 cents per square foot in item 361.45, TSUS, and dutiable at the rate of 5.9 percent ad valorem. Products classifiable under this item number are not entitled to GSP treatment.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Edgardo J. Garcia
Commercial Counsellor
Embassy of the Philippines
Washington, D.C. 20036

Dear Mr. Garcia:

Your letter dated April 14, 1986, requested the tariff classification and textile category of an article described as a lady's dress accessory.

The item is a "V"-shaped design made from a sheer woven fabric of man-made fibers. It measures approximately 8 inches long and gradually reaches 2 1/2 inches at its widest point. The fabric contains an embroidered design and additional stitching on the bottom edge. The item is considered ornamented.

Headnote 2(a), Part 4B, Schedule 3, Tariff Schedules of the United States (TSUS), defines the term motifs" as "individual textile pieces such as, but not limited to, labels, badges, emblems, insignia, initials, numbers, and ornaments, designed and almost wholly used for incorporation in, or appliqueing on, wearing apparel, furnishings, and other textile articles..."

We regard the item as an applique rather than as an inserting. This view is supported by an article appearing in April 1986, in Body Fashions/Intimate Apparel that described similar items as appliques that will be used for daywear, sleepwear, and foundation garments. Having examined this item and read the magazine article, it is our decision that the applique is "designed and almost wholly used for ...appliqueing on wearing apparel...."

The item is classifiable as an ornamented motif in item 353.50, TSUS. Products classifiable under this tariff provision may be subject to quantitative restrictions under category 627.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

TO : Area Director, J.F.K. Airport

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request 13/86 Concerning the Classification of Certain Cloth Emblems or Patches

This request for Internal Advice was initiated by a letter from Mr. Norman Katz, Esquire, on behalf of his client, Allison Corporation.

FACTS:

The merchandise at issue is an emblem or patch in the form of a profile of a rabbit head with a bow tie (in short, the Playboy bunny). The under surface of the emblem is coated with a thermoplastic adhesive substance. The head consists of a woven textile fabric base or ground, to which vertical and near parallel rows of a single style of white yarn stitching have been applied to create the surface or "hair" of the rabbit. There is a slight space where the stitching to mark the neck portion of its bow tie or collar will be applied. The "wings" of the bow tie are of the same type of white yarn stitching, but they are sewn on at right angles to the stitching comprising the body of the emblem. There is a circular space left for the eye, which will be created later with stitching using black thread.

The eye is composed of a narrow band of radial stitching around the edge of the socket, with parallel stitching filling in the balance of the eye. The neck strap (or collar) of the bow tie and the bow tie are outlined by the stitching or embroidery of black thread. The outline of the whole rabbit head is also stitched with black thread. The black embroidery type stitches are essentially perpendicular to the edge throughout the

THIS DOCUMENT MAY BE RELEASED TO THE
PUBLIC _____

entire periphery, forming a band approximately 3/16 inch wide which overlaps the white stitching.

These emblems were originally classified by the importer under the provision for ornamented textile articles in item 386.13, Tariff Schedules of the United States (TSUS). The JFK import specialist sent a Notice of Action to the importer classifying the emblems as textile articles, not ornamented, in item 389.62, TSUS. The inquirer believes that the patches or emblems are ornamented and were correctly classified in item 386.13, TSUS.

ISSUE:

Are the emblems ornamented by the black stitching?

LAW AND ANALYSIS:

The inquirer claims that the black embroidered border, the black embroidered outline of the collar and bow tie, and the black embroidered eye are all nonfunctional and were added to a fully recognizable and complete bunny emblem solely for ornamental purposes to enhance the appearance and visual effect of the emblem. He cites Customs Headquarters Ruling Letter (HRL) 059267, dated October 25, 1978, in support of his position.

The bunny in the emblem appears to represent the Playboy Enterprises registered trademark of a "Rabbit Head Design," (i.e., the Playboy bunny), believed to be trademark No. 728,889. See Customs circulars COP-4-RM(2), of October 23, 1969, MS-TMK-2(5) of June 30, 1980, and TM No. 82-89, of May 28, 1982. The trademark registration has been extended to March 20, 2002.

Noting these circulars, only the final stage of the bunny emblem, with all the black stitching embroidered in, is the universal and instantly recognizable Playboy bunny symbol. Inasmuch as the black stitching has a

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

078887

F6

significant purpose regarding the character of the article (i.e., to complete the design of the famous Playboy bunny), it is functional in nature. As such, the black stitching does not constitute ornamentation because it is an integral part of the Playboy bunny design.

Few patches or emblems of this type are ornamented, because very few have embellishments added to a complete patch. Instead, the patches are created by the embroidery, as the Playboy bunny patch is created by all the stitches, white as well as black embroidery. The issue is whether the black embroidery completes the article or is an additional embellishment to a complete article. There is no doubt but that the black embroidery completes the Playboy bunny design, therefore it does not constitute ornamentation. We find that the instant emblems or patches are classified under the provision for other textile articles, not ornamented, in item 389.6270, TSUS.

HOLDING:

The emblems are not ornamented and are classified in item 389.62, TSUS. You should inform the inquirer of this ruling.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Salvatore E. Caramagno, Esq.
Ross & Hardies
1090 Vermont Avenue, N.W.
Washington, D.C. 20005-4905

Dear Mr. Caramagno:

This is in response to your letter of August 28, 1986, submitted on behalf of National Hand Tool Corporation, requesting a binding ruling with regard to the tariff classification of a socket wrench case. A sample of the case is provided. Specifically, you request that we find the case to be "of plastic" for tariff purposes. You state that the case will be shipped to the United States in quantity by the end of September. As such, it is incumbent upon your client to know whether the shipments will be subject to quota restrictions. You indicate that a binding ruling on the exact classification of the product will be sought at a later date.

We are unaware of any procedure whereby binding rulings may be sought in stages. The provisions of section 177.1(a)(1) of the Customs Regulations, (19 CFR 177.1(a)(1)), limit the issuance of binding rulings to prospective transactions. If, as you indicate, the wrench cases will be shipped to the United States in the near future, it would be inappropriate to request a further binding ruling on their tariff classification as they would be the subject of a current, rather than a prospective, transaction.

Accordingly, this ruling shall address the tariff classification of the product and will not be limited to a finding of whether it is "of plastic" for tariff purposes. Other administrative mechanisms are available (requests for internal advice or protests) to contest Customs actions in current or completed transactions.

The product in question is a case which when closed is 10 and 1/2 inches in length and 9 and 1/2 inches in width. It has a zipper closure around three edges. The surface of the case is comprised of a black calendered plastic material. The plastic is backed with a textile. Beneath the textile backing is a layer of foam rubber. The case opens to reveal numerous plastic compartments designed to hold tools. The inside surface is comprised of a black smooth plastic covering a layer of compressed paper fibers.

F8

078894

Headnote 5(a), Schedule 3, Tariff Schedules of the United States, (TSUS), provides that for purposes of certain parts of the tariff schedules:

> [I]n determining the classification of any article which is wholly or in part of a fabric coated or filled, or laminated, with nontransparent rubber or plastics (which fabric is provided for in Part 4C of this schedule), the fabric shall be regarded not as a textile material but as being wholly of rubber or plastics to the extent that (as used in the article) the nontransparent rubber or plastics forms either the outer surface of such article or the only exposed surface of such fabric.

Pursuant to this language, the surface character of the outer surface of the article governs its tariff classification. See Customs Ruling Letters of September 10, 1986 (Control No. 077139), August 15, 1984 (Control No. 074686) and June 3, 1985 (Control No. 076069). Fabric will be considered nontransparent if the coating obscures the textile fibers or yarns so that they cannot be seen and eliminates the textile surface character of the fabric. C.S.D. 79-82.

The outer surface of the socket wrench case is comprised of a calendered plastic that completely obscures the textile fibers beneath it. The textile surface character of the fabric is eliminated. Accordingly, for tariff purposes, the surface fabric of the case is considered to be of plastic. The case itself will be considered to be of plastic if it is in chief value thereof.

In Headnote 2(a)(ii), Schedule 7, Part 1D, TSUS, the term "luggage" is defined as "brief cases, portfolios, school bags, photographic equipment bags, golf bags, camera cases, binocular cases, gun cases, occupational luggage cases (physicians', sample, etc.), and like containers and cases designed to be carried with the person ... ". The subject case is portable and can be used by the professional or the hobbyist to store and carry socket wrenches. It is akin, therefore to the occupational luggage cases or hobby cases described in the above-noted tariff definition.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Assuming that it is in chief value of plastic, we find the wrench socket case to be classifiable as Luggage ... : of other material: other, under item 706.62, TSUS, dutiable at the rate of 20 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Seymour Rothstein
Allegretti, Newitt, Witcoff & McAndrews, Ltd.
125 South Wacker Drive
Chicago, Illinois 60605

Dear Mr. Rothstein:

In New York Ruling Letter (HRL) No. 816966 dated March 11, 1986, you were advised that the Cateye Solar Model CC 2000 cyclo computer is classifiable under item 711.98, Tariff Schedules of the United States (TSUS), as other revolution counters, production counters, taximeters, odometers, pedometers and counters similar to the foregoing articles with duty at the rate of 0.6 percent ad valorem.

We have reconsidered the result reached in New York Ruling Letter No. 816965 and have concluded that the merchandise is more specifically provided for as a bicycle speedometer under item 711.93, TSUS, with duty at the rate of 18.3 percent ad valorem. Therefore, the ruling issued to you by our New York office is revoked insofar as it is inconsistent with the result reached in the enclosed copy of a ruling (our file No. 077865 c) of even date issued to the law firm of Bellsey and Baker. This ruling will be effective as to the subject merchandise entered or withdrawn from warehouse for consumption by your client after the date of this letter.

Sincerely,

Harvey B. Fox

District Director of Customs
Patrick V. McNamara Bldg.
477 Michigan Avenue
Detroit, Michigan 48226-2568

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3801-5-001871

This protest was filed against your decision in the liquidation on May 3, 1985, of entry No. 85652933 dated March 13, 1985, covering a shipment of laundry tubs manufactured in Canada.

FACTS:

The merchandise involved may be described as laundry/utility tubs of high-impact, chemical resistant polypropylene plastic having a 22 gallon capacity.

The tubs were liquidated under the provision for other articles not specially provided for, of rubber or plastics in item 774.55, Tariff Schedules of the United States (TSUS).

The protestant claims that the tubs are properly classifiable under the provision for other household articles not specially provided for, of rubber plastics in item 772.15, TSUS.

ISSUE:

Are these tubs of a class or kind chiefly used in the household?

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

F12

LAW AND ANALYSIS:

The seller of the tubs in a letter to the protestant dated April 18, 1984, stated that the tubs "are used in homes or commercial institutions in conjunction with laundry equipment for the washing of clothes."

Sales literature presented by the protestant describes the tubs as "products for home improvement," and states that "your plascolite utility and laundry tubs could outlive your home."

Information before this office is that the tubs are marketed through retailers, such as K-Mart, Payless Cashways, Home Depot and B&B Home Centers, who are "self help" home improvement centers.

Based on the foregoing and the relative inexpensive cost of the tubs, it appears that they are chiefly used in the household.

HOLDING:

The tubs are classifiable under the provision for other household articles not specially provided for, of rubber or plastics in item 772.15, TSUS. The protest should be allowed. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Ms. Edith M. Taylor
Standun Packaging Systems
1740 South Sacramento Avenue
Ontario, California 91761

Dear Ms. Taylor:

This is in response to your letter dated August 25, 1985, requesting reconsideration of Headquarters Ruling Letter 076521 dated November 25, 1985.

In that ruling, we determined that plastic net bags from Taiwan were classified under the provision for articles not specially provided for, of plastics in item 774.55, Tariff Schedules of the United States (TSUS). The rationale for our decision was that both store personnel and shoppers would use the bags to package the produce, and in the absence of establishing a chief use for the bags, item 772.20, TSUS, the provision for containers of rubber or plastics, with or without their closures, chiefly used for the packing, transporting and marketing of merchandise was precluded.

You state that our decison relied on erroneous statements by your broker that the bags were used by shoppers to package the produce. In fact, you state that the bags are never used by the ultimate consumer. Growers, wholesale packers and retail produce clerks use the bags in their merchandising operations.

Based on your clarification, we conclude that the subject bags are classifiable in item 772.20, TSUS, because they are chiefly used for the packing, transporting and marketing of merchandise. The bags are used to package produce which is still in the stream of commerce.

Articles from Taiwan that are classifiable in item 772.20, TSUS, are eligible for an exemption from duty under the Generalized System of Preferences upon compliance with all applicable requirements.

In view of our decision, Headquarters Ruling Letter 076521 is revoked.

Sincerely,

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Suite 333
South Orange, New Jersey 07079

Dear Mr. Heffley:

Your letter of July 18, 1986, requests a ruling on the tariff classification of an electronic optical text reader to be imported from France for the exclusive use of the blind.

The machine, trademarked Delta, manufactured by the Systelec Co., "reads" print and converts it to an electrical impulse that, in turn, creates raised Braille dots on an output pad. The Braille symbols, composed of arrangements of dots, are made by pins that rise on a flat surface, depending on the Braille symbol to be made. After a few symbols have been made, the pins drop back to the flush position. This machine is to be used as a reading aid for blind people exclusively.

This device is classified in item 826.20, Tariff Schedules of the United States. This item provides duty-free treatment for "Articles for the blind: Braille tablets, cubarithms, and special apparatus, machines, presses, and types for their use or benefit exclusively."

With regard to your question about country-of-origin marking, please find enclosed a copy of our regulations on the subject.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Area Director of Customs
New York Seaport
6 World Trade Center
New York, New York 10048

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-1-010222 Timely Application of Photographic couplers, products of Japan.

The chemical, 5 Nitro-2-Amino Phenol, was entered on April 7, 1978, and was liquidated on July 24, 1981, under item 403.60, TSUS.

It is claimed that the imports are cyclic organic chemical products used in the manufacture of photographic couplers, and thus free of duty under former item 907.10, TSUS, which provided for temporary suspension of duty for certain benzenoid cyclic organic chemicals used in the manufacture of color couplers.

General Interpretative Rule 10(e)(ii) and Customs Regulations 10.133 (which are more specific than section 10.112 cited by protestant) make it clear that an actual us provision is satisfied only (1), if such use is intended at the time or importation; (2) if the article is so used; and (3) if proof thereof is furnished within 3 years after the date the article has been entered.

The protestant asserts that the chemicals were used in the manufacture of photographic couplers and, therefore, should receive duty free entry under 907.10, TSUS. This is felt to be established by the letters from Tennessee Eastman and Eastman Kodak, dated August 7, 1981, which explained that the chemicals were used in the production of photographic color couplers. As stated by the court, "even though a product is actually used in the manner contemplated by an actual use provision, it may be classified under that provision only if the mandate of general interpretative rule 10(e)(ii) has been complied with." J. E. Bernard & Co., Inc. v. United States, (C.D. 4743) 1978.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

62

In this case the chemicals were entered in April 1978, but the evidence of proof of use was submitted in August 1981. As remarked by the court in the Bernard case, the timely filing of certificate of actual use is as much a requirement for classification under an actual use provision as proof of the actual use itself.

The requirement is not submission of required proof within 90 days of liquidation, as claimed by protestant, but within 3 years after the date the article has been entered.

You are directed to deny the protest in full. A copy of this decision should be attached to the Form 19 Notice of Action.

Sincerely,

Arthur P. Schaffner

078923

Mr. Antti Luhtala
Almarin, Inc.
2955 State Road 84
Building D5
Fort Lauderdale, Florida 33312

Dear Mr. Luhtala:

Your correspondence of September 7, 1985, requests a ruling on the classification of a flotation jacket qualifying as a Type III Personal Flotation Device under Coast Guard standards. Implicit in the ruling request is the potential eligibility of this garment for tariff treatment under item 807.00, Tariff Schedules of the United States (TSUS).

The garment may be imported from Guatemala and may consist primarily of United States components according to information we recently received from you by telephone. We understand that the plan stated in your letter has changed and that you do not plan to assemble the garment in St. Lucia. Instead, you intend to send fabricated United States components to Guatemala where all construction and assembly would take place. Then the finished garments would be returned to the United States where packing, sorting, and safety testing would be completed, prior to sale to a wholesaler.

The jacket is composed of 200 denier nylon fabric with a filling of polyvinylchloride foam for buoyancy. It features a full front opening, two lower slash pockets, full zippered sleeves, stand up convertible collar, a whistle pocket with whistle, and tie strings at the waist.

The pocket for the whistle has letters set vertically that spell the name of the importer. If these letters, which have a flocked surface, had an existence prior to being applied to the fabric, then they would be considered an applique and, consequently, an ornamenting feature of the garment. If they were applied directly by stenciling or silk screening or some printing method, then their presence would not constitute ornamentation.

The jacket combines features found in wearing apparel and articles used solely for protection against hazards. It provides warmth and protection from the wind and elements for passengers in open boats, for example. Therefore, because it provides some comfort which is a characteristic of wearing apparel, it would not be removed from classification as wearing apparel just because it provides some protection from the hazard of drowning.

G4

The jacket is classifiable as follows:

If ornamented, it is classified in item 384.23, TSUS, the provision for "...other women's, girls', or infants' wearing apparel, ornamented: Of man-made fibers: Not knit: Blouses, coats, shirts, suits, swimming suits and other swimwear, trousers, slacks, and shorts, coats: Women's and girls': Other," dutiable at 32.1 percent ad valorem.

If not ornamented, it is classified in item 384.91, TSUS, the provision for "Other women's, girls', or infants' wearing apparel, not ornamented: Of man-made fibers: Not knit: Other: ...coats...: Other, Other: Coats: Other: Women's," dutiable at 18 cents per pound plus 27.5 percent ad valorem.

The whistle, made of a substantial durable plastics material, does not belong to the class or kind of goods known as toys. Following the principles in Headquarters Ruling Letter (HRL) 062854, January 14, 1980, the whistle does not form an entirety with the jacket, but is separately dutiable. It is classified in item 774.55, TSUS, the provision for articles, not specially provided for, of rubber or plastics, dutiable at 5.7 percent ad valorem.

Item 807.00, TSUS, provides that certain articles assembled abroad, in whole or in part of fabricated components which are the product of the United States, may be subject to duty upon the full value of the imported article, less the cost or value of such products of the United States. The operation described, which entails sending the nylon fabric in the piece to Guatemala for cutting and assembly with the other components, would not result in an exemption for the components that are a product of the United States. Materials exported in a basic shape or form, from which components of wearing apparel or other articles will be cut according to a pattern, are not considered fabricated components for purposes of item 807.00, TSUS.

In the alternative, you stated that all the pieces of the foam and fabric would be cut in the United States prior to exportation to Guatemala for sewing assembly. Presuming that no operation is performed on the exported United States components except for sewing or attaching them to other components to form the completed article, item 807.00, TSUS, would be applicable. Certain insignificant operations, incidental to the assembly process, would not constitute further fabrication and would not preclude application of the exemption. However, further information concerning the operations performed in Guatemala, would be needed for definite advice.

Sincerely,

John Raith

District Director of Customs
517 E. Wisconsin Avenue
Room 554
Milwaukee, Wisconsin 53202

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 3701-3-000006

This protest was filed against your decision in the liquidation on September 4, 1981, of entry No. 81139935 dated March 23, 1981, covering a shipment of target games manufacturned in Hong Kong.

FACTS:

The merchandise involved consists of projectile guns which shoot corks and sponge tipped plastic rockets. These items are packaged on a blister card with a target printed on the reverse of the paper card.

This set was liquidated under the provision for other toys in item 737.95, Tariff Schedules of the United States (TSUS).

The protestant claims that the merchandise is properly classifiable under the provision for game equipment in item 735.20, TSUS.

In support of its position the protestant cites Internal Advice Request No. 191/81 dated June 17, 1982, which held that essentially the same merchandise is classifiable under item 735.20, TSUS.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G6

The protestant further argues that the failure of Customs to follow precedent in this matter which resulted in an erroneous classification amounts to a clerical error which is correctable under 19 U.S.C. 1520(c)(1).

ISSUE:

1. Should the merchandise have been classified under item 735.20, TSUS?

2. If so, is the misclassification correctable by recourse to 19 U.S.C. 1520(c)(1)?

LAW AND ANALYSIS:

The classification of the subject merchandise is governed by the result reached in Internal Advice Request No. 191/81 and the entry should have been liquidated under item 735.20, TSUS, as claimed by the protestant. However, the protest against the classification of the merchandise was untimely because it was not made within the 90 day period after liquidation as required by 19 U.S.C. 1514.

The protestant's claim that the error is correctable by recourse to 19 U.S.C. 1520(c)(1) fails for the following reasons:

1. The misclassification of the merchandise was an error in the construction of the law rather than a clerical error; and

2. the misclassification was brought to the attention of Customs more than one year after the date of liquidation.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

078926

G7

HOLDING:

The protest should be denied. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Ronald L. Rapaport
Metal Film Company, Inc.
1717 Patterson Plank Rd.
North Bergen, New Jersey 07047

Dear Mr. Rapaport:

Thank you for your letters dated August 22, and September 12, 1986.

As stated by you, Lurex® yarn is manufactured by metalizing aluminum directly onto a single layer of polyester and then covering it with a very thin coating.

You further state that this process is identical to the way that lame and tinsel are manufactured.

Your understanding that Lurex is made in the identical way as lame is the basis of our disagreement with you. It is our position that the following statement in the 1948 Summaries of Tariff Information provides an accurate description of lame and tinsel wire.

> Tinsel wire is round wire composed chiefly of copper or brass. It is usually coated or plated with a bright metal, such as real or imitation gold or silver and it is also produced in colors. Lame (a French word) (lahn in Germany) is manufactured by passing the tinsel wire through metal rollers which flatten it into various widths depending on the gage of the wire; it is often subjected to ornamental corrugating or coloring processes.

Inasmuch as the Lurex® product is made differently, we cannot agree that it is classifiable as a metalized yarn in item 312.30, Tariff Schedules of the United States (TSUS). As we previously advised you, items that are classifiable in 312.30, TSUS, must be in chief value of tinsel wire or lame. The product in question contains no tinsel wire or lame.

We appreciate the importance of this matter to your company. However, we are convinced of the soundness of our position. Should you wish to contest our classification, we are enclosing a copy of the Customs regulations regarding protests.

SUBJECT: Internal Advice Request No. 51/86 Concerning the Tariff Classification of a Polypropylene Plantholder Manufactured in Taiwan

The merchandise involved is used as a plantholder by florists. It is constructed of polypropylene monofilament yarns and strips. The monofilament yarns and strips are woven or braided to form 3/4 inch wide fabric which is sewn together to form the plantholder.

This article cannot be considered a net article because it is woven. See T.D. 75-57(1). A laboratory report states that the "sample consists of olefin strips which in their unfolded, untwisted, uncrimped condition measure over 1 inch in width and less than 0.01 inch in thickness. Therefore, the polypropylene strips are not considered textile noting Schedule 3, Part 1, Subpart E, Headnote 3(d), Tariff Schedules of the United States (TSUS). However, the polypropylene monofilament yarns are considered to be man-made fibers. The cost breakdown shows a cost of $.1448 per piece for the polypropylene which combines the strips and the filaments.

If the plantholder is in chief value of the monofilament yarns, it would be classifiable under the provision for other articles not specially provided for, of textile materials, not ornamented, of man-made fibers in item 389.62, TSUS, and dutiable at the rate of 4 cents per pound plus 10 percent ad valorem.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G11

If the plantholder is in chief value of plastics, it would be classifiable under the provision for other household articles not specially provided for, or rubber or plastics in item 772.15, TSUS, and dutiable at the rate of 4 percent ad valorem.

Dear Mr. Meiselman:

You asked for the tariff classification of an embroidered emblem manufactured in Taiwan and used for decoration or insignia. The emblem could be made of either cotton or man-made fibers. You submitted a sample with your letter.

Inasmuch as the embroidered stitching makes the design, logo or symbol, finishes the emblem and does not further embellish the emblem with extraneous stitching, the emblem is not considered an ornamented motif.

If the emblem is in chief value of cotton, it is classifed under the provision for articles not specially provided for, of textile materials, of cotton, other, in item 386.5300, Tariff Schedules of the United States (TSUS), dutiable at the rate of 8.2 percent ad valorem. If the patch is in chief value of man-made fibers, it is classified under the provision for articles not specially provided for, of textile materials, of man-made fibers, other, in item 389.6270, TSUS, dutiable at the rate of 4 cents per pound plus 10 percent ad valorem.

Sincerely,

Harvey B. Fox

Mr. Joe Binder
Schweizer Emblem Company
3345 North Wolcott Avenue
Chicago, Illinois 60657

Dear Mr. Binder:

You asked for the tariff classification of embroidered emblems of man-made fibers from Taiwan. Several samples were submitted with your letter.

Inasmuch as the embroidery stitching makes the design, logo or symbol, finishes the emblems and does not further embellish the emblems with extraneous stitching, the emblems are not considered ornamented motifs.

The emblems are classified under the provision for articles not specially provided for, of textile materials, of man-made fibers, other, in item 389.6270, Tariff Schedules of the United States(TSUS), dutiable at the rate of 4 cents per pound plus 10 percent ad valorem.

If the "Experimental Aircraft Association" emblem is in chief value of the nonwoven portion, it is classified under the provision for non-woven articles not specially provided for, of man-made fibers, in item 355.25, TSUS, dutiable at the rate of 2 cents per pound plus 12.9 percent ad valorem. Textile category 669 applies to merchandise classified in item 355.25, TSUS. As a product of Taiwan, merchandise classified in item 355.25, TSUS, is subject to visa requirements based on international textile trade agreements.

Mr. Joe Schmid
J.S. International
8621 Bellanca Avenue
Suite 213
Los Angeles, California 90045

Dear Mr. Schmid:

Your letter dated June 3, 1986, addressed to our New York office concerning the tariff classification of a novelty cap manufactured in Taiwan, has been referred to this office for a direct reply to you. A sample was submitted for examination.

The sample "Funny Cap" is a novelty cap made of 100 percent man-made fibers and has a crown consisting of six panels. The four back panels are of a knit mesh construction with the balance of the cap, the crown, brim and sweat band, of a woven fabric. The novelty face is stitched to the two front panels and is of a knit pile constructed fabric with two plastic eyes and a mouth made by stitching a contrasting color braid to the bottom and sides of the three dimensional face. The funny face represents a "Nerd" cartoon character and is stuffed with man-made fiber wadding.

General Headnote 9(f)(iv), Tariff Schedules of the United States (TSUS), provides that "'in part of' or 'containing' mean that the article contains a significant quantity of the named material." An item contains a significant quantity of braid if that portion or quantity serves a useful purpose and/or increases the saleability of the article.

The braid on the cap is the same color as the brim and the front panels. This office has previously ruled that non-constrasting braid on a cap, when viewed at arms length, is considered a braided cap for tariff purposes. The rationale for that position is that at arms length distance the braid is seen and whether it contrasts or not, it adds to the saleability of the cap because such a cap is per se ornamented.

However, the cap involved in that ruling was a baseball cap rather than a novelty cap which is the subject of this ruling. It is our position that the presence of the non-contrasting braid does not serve a useful purpose and does not increase the saleability of the cap for the following reasons:

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A3

(1) The presence of the three dimensional Nerd face is paramount and

(2) This "funny face" physically hides portions of the braid unless it is viewed from the side.

In view of the foregoing, it is our position that the cap is not in part of braid and is therefore classifiable under the provision for other headwear, of man-made fibers, not in part of braid, not knit in item 703.16, TSUS, and dutiable at the rate of 12 cents per pound plus 9.5 percent ad valorem.

Sincerely,

for Harvey B. Fox

Cleveland, Ohio 44114

Dear Sir:

Re: Your File CLA-1-01-CL:DD:CV:CEB LG, Request for Internal Advice 58/86

Upon receipt of a letter from Blaser & Mericle, Inc., Customhouse Brokers, on behalf of their client Mrs. Else Schmelzer, you have asked us to review the tariff classification of wooden nutcracker dolls. Mrs. Schmelzer has been advised by the West German exporter that these articles are being classified differently at different U.S. ports. Specifically, while some ports, including Cleveland, have been classifying all such articles as dolls under item 737.24, Tariff Schedules of the United States (TSUS), others have been classifying those over ten inches tall as household utensils NSPF, of wood, under item 206.98, TSUS. For the reasons stated below, we are in agreement with your position that all such articles are classifiable as dolls.

A copy of the broker's letter was received in this office without the illustrated literature stated to be enclosed. A telephone call to the broker resulted in a promise to send some, but none was received. We assume, however, that the articles in question are similar to many others offered for sale in department stores, museum shops, theaters, and other locations. They are made from wood in a variety of countries including West Germany and Taiwan. They range in size from a few inches tall to over a foot tall and retail at prices ranging from a few dollars to around seventy-five dollars, perhaps more. They represent a variety of full-length human figures. Many depict the Nutcracker Prince, hero of the ballet The Nutcracker frequently performed around Christmas time. Others take the form of football players, violin makers, and other characters. They usually have arms that can be placed in a variety of positions and a wooden handle in the back that can be manipulated to open and close the mouth.

AS

It is established beyond doubt that a large variety of full-length human figures serving a number of purposes, including amusement and decoration, are classifiable as dolls for customs purposes. See, for example Russ Berrie & Co., Inc. v. United States, 76 Cust. Ct. 218, C.D. 4659 (1976), appeal dismissed, 63 CCPA 125 (1976). Headquarters has ruled many times that nutcracker dolls are classifiable as dolls. In file 004837, of August 21, 1970, a nutcracker wood doll about ten inches tall in the form of a soldier was classified as a doll. File 025460, of April 6, 1973, concerned a fifteen-inch wood soldier nutcracker doll with movable arms. It was also classified as a doll, and this decision was followed in file 043238 of January 6, 1976. Wooden nutcrackers shaped like humans were again classified as dolls in file 039777 of July 1, 1975. Ornate hand crafted nutcrackers in the shape of soldiers were classified as dolls in IA 53/77 of June 6, 1977. The question was raised again and the answer reaffirmed in file 056347 of March 14, 1976. A protest review decision of 1978, file 055065, concerned the classification of nutcrackers in the image of soldiers, up to 21 inches in height and up to seven pounds in weight. They, too were classified as dolls, with C.I.E. 36/75 and ORR Ruling 77-0055 cited as references. These rulings were correct and should continue to be followed.

We have never issued a ruling classifying these articles as other than dolls, much less classifying some of them differently from others according to height. A height distinction would in any case be arbitrary and easily evaded. More importantly, we find no justification for classifying any of the nutcracker dolls as household utensils of wood under item 206.98, TSUS. File 059395 of April 28, 1978 defined household utensils, for tariff purposes, as articles "used chiefly in the home where [they] serve[] some useful purpose in the operation of housekeeping." No evidence has been presented to support a claim that these articles are chiefly so used.

Apparently at one point a Customs import specialist decided to test a number of nutcracker dolls to see whether they could really be used to crack nuts. Smaller models broke or fell apart, while some of the larger ones actually did crack some nuts, although the paint chipped off in the process, contaminating the nuts. Thereafter, some verbal advice was given out to the effect that since the larger ones would crack nuts, they should be classified as household utensils of wood. As stated above, however, that has not been the position of Customs Headquarters, and no rulings to that effect have ever been issued. While it may be physically possible to crack some nuts with a few of these articles, they are generally too flimsy to be put to work in the kitchen

RELEASED TO THE

A6

cracking pounds of nuts for pie-baking, for example. We have no evidence that they are sold along with wooden meat tenderizers, spatulas, stirrers, and other household utensils of wood. See file 052280 of January 4, 1978.

Having searched through a number of books that provide style and price information for antique collectors, we have not found any that list full human figures of wood under the heading of nutcrackers. True functional nutcrackers have generally been made of metal. L. C. Franklin, 300 Years of Kitchen Collectibles (2d ed., 1984), lists, at 93-100, a number of nutcrackers sought by collectors; many are of cast iron. H. L. Rinker, ed., Warman's Americana and Collectibles (2d ed., 1986), indicates, under "collecting hints" on nutcrackers, at 365, that the most popular modern nutcrackers are military and civilian figures made in East Germany, collected primarily for show and not for practical use. Nineteenth century cast iron nutcrackers, many of which are in the shape of animals, were meant to be used.

Any functional use of nutcracker dolls would be incidental to their amusement or decorative aspects. They should continue to be classified under item 737.24, TSUS, the eo nomine provision covering all forms of dolls. Thank you for bringing this matter to our attention.

Sincerely,

Arthur P. Schaffer

078975 DW

Mr. Louis Ichter
Customs Attache
French Embassy
4101 Reservoir Road, N.W.
Washington, D.C. 20007-2169

Dear Mr. Ichter:

This is in further response to your letter of June 4, 1986, on behalf of L. Payen SA, concerning the tariff classification of certain man-made fiber yarn that was entered at the port of Charlotte, North Carolina by U.S. Textile Corporation. A sample was submitted with your letter dated July 9, 1986.

The yarn is described as consisting of one 40 denier elastomere core thread and one twisting thread made from continuous 20 denier polyamide 66. The yarn is stated to be 100 percent synthetic; entirely continuous; over 20 turns per inch; and more than $1.00 per pound.

It was classified as entered under the provision for yarns of man-made fibers: other: wholly of continuous man-made fibers: plied: with over 20 turns per inch in the final twist: valued over $1 per pound in item 310.21, Tariff Schedules of the United States (TSUS) with duty at the rate of 1.5 cents per pound plus 12.3 percent ad valorem. It was reclassified as yarns of man-made fibers; other: other in item 310.60, TSUS, with duty at the rate of 2 cents per pound plus 15 percent ad valorem.

We are in agreement with Mr. Soly of L. Payen insofar as the yarn in question is wholly continuous. The yarn, however, is not considered to be plied for tariff purposes. The sample yarn was sent to a Customs laboratory where in a report dated October 3, 1986, it was determined that the core yarn is composed of a spandex-type elastic that is wrapped with a nylon yarn.

There is no question that Customs distinguishes between wrapped and plied yarns. Your attention is drawn to Headquarters Ruling Letter (HRL) dated October 23, 1980, file 066166 (copy enclosed), in which we set forth this distinction. Again, in HRL 068704 dated June 30, 1981, file

A8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

068704 (copy enclosed), we ruled that a yarn composed of an elastomeric (Lycra) core that is wrapped with nylon was classified in item 310.60, TSUS. In short, a plied yarn consists of two or more yarns that are twisted together.

Wrapped yarns are considered to be neither singles nor plied for tariff purposes. Therefore, the merchandise at hand is not classifiable in item 310.21, TSUS, because it is not considered to be a plied yarn. Item 310.60, TSUS, is a basket provision for yarns of man-made fibers that are not more specifically described in the foregoing provisions. Wrapped yarns that are either in noncontinuous or continuous form would be covered by item 310.60, TSUS.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

A9

THE COMMISSIONER OF CUSTOMS

WASHINGTON, D.C.

October 9, 1986

CLA-2 CO:R:CV:G
078977 JLF

Dear Mr. Frenzel:

Secretary Baker has asked me to reply to your letter of September 11, 1986, regarding our recent decision concerning the tariff classification of adult Halloween costumes. You ask that we reconsider that decision in view of the costumes' relative flimsiness and the fact that no similar costumes are produced by the domestic textile industry.

The import of the relative flimsiness of the sample costumes we were provided for examination was fully argued by counsel for the importers in the course of our consideration of this matter. In our opinion, however, this factor was not germane to the proper tariff classification of the costumes. As we noted in our ruling, adult Halloween costumes are properly viewed, for purposes of determining their chief use, as a class or kind of merchandise, irrespective of differences in cost or quality of construction. However, we do not believe that the chief use of even the relatively inexpensive or flimsy costumes is other than in the context of adult activities where costumes are required or appropriate. Adult costumes are, in essence, "party clothes" and as such differ in use from children's costumes, which are primarily bought and used for the traditional "trick-or-treat" journey for the amusement of neighbors, other children, and the wearer-children themselves.

Although information received from both the Toy Manufacturers Association and the American Textile Manufacturers Institute suggests that similar costumes are produced in the United States, this consideration had no effect on our decision. Rather, the proper classification of adult Halloween costumes is governed by their chief use in the United States which, because their chief use as toys was neither apparent nor demonstrated, we have determined to be as wearing apparel.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

A10

We regret the difficulties our decision may cause your constituent but, after careful reconsideration of the matter, we believe the decision we have reached is proper.

If we can be of further assistance to you in this or any other matter, we hope that you will not hesitate to call on us.

Yours faithfully,

The Honorable
Bill Frenzel
Member of Congress
Washington, D.C. 20515-2303

WASHINGTON, D.C. 20229

OCT 27 1986

CLA-2:CO:R:CV:G
078992 JAS

District Director of Customs
110 S. Fourth Street
U.S. Courthouse, Room 137
Minneapolis, Minnesota 55401

Dear Sir:

This is our decision on Application for Further Review of Protest No. 3501-3-000050, dated September 27, 1984, relating to entry No. 82-207629, dated August 13, 1982, and liquidated August 12, 1983. The merchandise in issue is heat exchangers from Sweden.

FACTS:

The protested merchandise consists of 19 models of the Heatexchanger, ranging from the H 200-100 to the H 1200B-600. Importer/protestant maintains that these air-to-air heat exchangers are actually parts of a total field installed air conditioning/heating system the main purpose of which is to change the temperature and humidity of air. The system is also referred to as a heat recovery ventilator consisting of one supply air fan, one exhaust fan and the heat exchanger, the subject of this protest. Protestant states the subject heat exchangers vary in application, from process to process, process to comfort, and comfort to comfort, in such uses as paint spray booths, welding shops, food processing, etc. The exchangers are limited to heating or cooling air only, rather than other materials.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

A12

Brochures indicate these exchangers utilize a single or counterflow design and are static devices (no moving parts) designed to transfer heat. Although available in plastic, paper, stainless steel and other materials, the present heat exchangers are constructed of flat aluminum plates sealed with high temperature silicone, capable of withstanding continuous temperatures though 390 degrees F.

It is believed that the protested models are similar to those considered in ruling 074236, dated July 31, 1984. Similar in design to the one presently before us, the air-to-air heat exchangers considered in that ruling were placed on a diagonal at various locations in the ductwork of a combination air conditioning/heating apparatus used in a large domestic research laboratory. That ruling described the operation of these exchangers as follows: in the heating mode, a fan/blower arrangement introduces supply air into the ductwork. An exhaust fan draws contaminated, heated air from the system. As this stale air passes through the exchanger, heat is withdrawn via the metal plates and introduced to the supply air. Condensation is also removed from this heat during the process. In the air conditioning mode, coolness is removed from the stale exhaust air and is transferred to the fresh supply air. No refrigerant is used. A series of dampers and manifolds, which may or may not be imported with the exchanger but are not the subject of this protest, allow

078982

A13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

the air to bypass the exchangers when the outside temperature (i.e., in early spring and fall) makes it unnecessary to utilize the system to reach a preset room temperature.

Owing to the stated use of the subject heat exchangers, that is, to change the temperature and humidity of air, the importer/protestant maintains that the proper classification is under the tariff provision for air-conditioning machines, comprising a motor-driven fan and elements for changing the temperature and humidity of air, and parts thereof, in item 661.20, Tariff Schedules of the United States (TSUS). Your office, relying on a series of prior administrative rulings, has liquidated the concerned entry under the tariff provision for fans and blowers, and parts thereof, in item 661.06, TSUS.

ISSUE:

Are the concerned heat exchangers "parts" for tariff purposes, and is the provision in item 661.20 more specific than the provision in item 661.06?

LAW AND ANALYSIS:

As to the issue of whether these heat exchangers are "parts" in a tariff sense, the combination air conditioning/heating apparatus in which they will be used appears to be a complete, fully functioning unit. However, they lack compressors, condensers or evaporator coils, basic elements of a compression-system air conditioner. They also lack a heater or generator normally found in an absorption-system air conditioner. The heat exchange elements under consideration

078972

A14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

replace these conventional compression and absorption elements. These heat exchangers do not appear to be preheaters or precoolers nor, as previously thought, are they in the nature of accessories which augment or amplify the functions of the main heating/cooling apparatus. There is sufficient information in the submitted brochures and elsewhere in the protest file that the subject heat exchangers in the system are the only components that change the temperature and humidity of the air. They are therefore parts in a tariff sense.

General Interpretative Rule 10(e)(i), TSUS, requires that evidence of record show that the subject heat exchangers belong to that class or kind or articles whose chief use, i.e., the use which exceeds all other uses (if any) combined, is to change the temperature and humidity of air. Brochures submitted by protestant and other evidence of record indicate these air-to-air heat exchangers vary in application. They include process to process, process to comfort, and comfort to comfort applications. They are used in a wide variety of energy intensive heat recovery applications as previously noted. However, the heat recovery and transfer function in every application remains the same, and is performed solely by these exchangers. There is no evidence that the exchangers are parts of fans and blowers.

078992

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B1

HOLDING:

There is sufficient evidence that the nineteen (19) models of heat exchangers are "parts" for tariff purposes and are chiefly used as required for classification in item 661.20.

The protest should be allowed. A copy of this decision should be attached to the Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P Schaffner
for Harvey B. Fox
Director, Classification
and Value Division

CLA-2 CO:R:CV:G
078994 c

Ms. Eileen T. Romito
Coordinator of Direct Import
Tariff Classification
Sears Merchandise Group
Sears Tower, Dept. 733X BSC-19-45
Chicago, Illinois 60684

Dear Ms. Romito:

In a letter dated September 16, 1986, you asked for a reconsideration of a ruling issued by our New York office dated July 31, 1985 (File No. 818995), holding that a novelty animal style child's shoulder bag, stock No. 33121, manufactured in Hong Kong, is classifiable under the provision for handbags, of other textile materials, in item 706.41, Tariff Schedules of the United States (TSUS) and dutiable at the rate of 20 percent ad valorem.

The merchandise involved may be described as a novelty animal shoulder bag made of man-made textile pile fabric which measures approximately 13 inches by 7.5 inches. The bag simulates a small dog, identified as the "Luv Mutt," having stuffed legs and flappy knitted ears. The head and torso are empty. The bag is secured on its posterior side by means of velcro fasteners. Attached to the exterior front surface is a textile motif of a little bear. It is carried by a woven textile shoulder strap measuring approximately 26.75 inches.

You maintain that the sample is properly classifiable under the provision for other toy figures of animate objects (except dolls): Not having a spring mechanism: Not stuffed in item 737.40, TSUS, and dutiable at the rate of 8.3 percent ad valorem.

In support of your position you make the following points:

(1) The item is imported and sold as a toy as shown on the packaging and the attached page 42 of the Sears Christmas catalog;

(2) it is primarily used to provide amusement to children,

(3) the chief use of the novelty bag as an article providing amusement to children overshadows its incidental use as a bag;

B3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

(4) the amount of storage space in the bag is small and insufficient to carry anything of significance relative to other similar bags of comparable dimensions;

(5) the motivation for purchasing the item is significantly related to the enjoyment and the emotional attachment a child would have in owning the item; and

(6) the essential character of the item is that of a toy notwithstanding that a feature such as a conversion to a bag is added to the article.

In the alternative you stand with your original claim that the merchandise is classifiable under the provision for other articles not specially provided for, of textile materials, ornamented, of man-made fibers in item 386.13, TSUS.

The issue to be resolved is whether the novelty animal style child's shoulder bag is chiefly used for the amusement of children.

Schedule 7, Part 5, Subpart E, Headnote 2, TSUS, provides that "For the purposes of the tariff schedules, a '<u>toy</u>' is any article chiefly used for the amusement of children or adults."

Schedule 7, Part 1, Subpart D, Headnote 2(b), TSUS, provides that "the term '<u>handbags</u>' covers pocketbooks, purses, shoulder bags, clutch bags, and all similar articles, by whatever name known, customarily carried by women or girls, but not including luggage or flat goods as defined herein or shopping bags; ***."

The claim that the article is advertised and sold as a toy does not mandate the conclusion that it is chiefly used for the amusement of children. It is only a factor to be considered in making such a determination.

In the case of <u>Ideal Toy Corp. v. United States</u>, 78 Cust. Ct. 28, C.D. 4688 (1977), the court made the observation that "When amusement and utility become locked in controversy, the question becomes one of determining whether the amusement is incidental to the utilitarian purpose, or the utility purpose incidental to the amusement."

It is our opinion that the amusement derived from the novelty shoulder bag is incidental and subordinate to its primary function as a shoulder bag. Also, it is our observation that the amount of storage space in the handbag is adequate for carrying articles noting the age group who will use the novelty shoulder bag.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B4

078994

The rationale for the alternative classification is that the article is more than a toy and more than a shoulder bag. In order to be classifiable under item 386.13, TSUS, it must be shown that the novelty shoulder bag possesses two coequal functions. See Amico, Inc. v. United States, 79 Cust. Ct. 125, C.D. 4723 (1977). We do not agree that the amusement factor of the bag is coequal with its handbag function. As stated previously, it is our opinion that the amusement factor is subordinate or incidental to the bag's primary function as a handbag.

In view of the foregoing, we affirm the ruling of our New York office holding that the merchandise is properly classifiable under item 706.41, TSUS.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

OCT 30 1986

REFER TO
CLA-2:CO:R:CV:G
079020 SM

Mr. Phil Pugh
Brown Group, Inc.
P.O. Box 29
St. Louis, Missouri 63166

Dear Mr. Pugh:

You have requested a tariff classification ruling for two styles of shoes, the Scamper pattern, sample 285L01, and the Paisley pattern, sample 186L02.

Both samples submitted to this office are open-toe casual shoes with embroidered plastic vamps. The Scamp style, a slip-on, is labeled as having a leather sock with the balance of the shoe of man-made materials. The Paisley style, of all man-made materials, features a strap that buckles around the ankle. The embroidery on the Scamp consists of several rows of parallel stitches very close together along the open edges of the vamp. Several more rows of stitching form concentric circles at the center of the vamp. On the Paisley style, the embroidery also in closely spaced rows, forms several paisley swirls scattered across the vamp. On both shoes, the embroidery is stitched through only the outer layer of plastic.

Since these shoes are over 50 percent by weight of rubber or plastics, do not have uppers of which over 50 percent of the exterior surface area is leather, and do not have foxing or a foxing-like band, the main issue for tariff classification purposes is whether they can be described as having uppers of which over 90 percent of the exterior surface area is rubber or plastics, the embroidery on the exterior surface here being of textile material.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B6

The Court of International Trade held, in Inter-Pacific Corp. v. United States, --CIT--, Slip Op. 84-97 (decided August 22, 1984), that decorative textile embroidery on the exterior surface of footwear with uppers of rubber or plastics was part of the exterior surface of the upper. The amount of exterior surface area covered by the embroidery is therefore a factor in determining whether such footwear can be said to have uppers of which over 90 percent of the exterior surface area is rubber or plastics.

We have previously determined that when lines of embroidery on shoes such as those you have submitted are so close together that it would be too difficult for the laboratory to measure the minute amounts of plastic surface area inside the embroidery lines but not actually covered by them, the embroidered design will be treated like a solid, filled-in embroidery design. See file 078731 of September 22, 1986.

Our determination, based on the assumption that the embroidery design on both shoes covers at least ten percent of the exterior surface area of the upper, is that both samples are classifiable under item 700.59, Tariff Schedules of the United States.

Sincerely,

Arthur P. Schaffer

Mr. Ike Matitia
International Seaway Trading Corp.
1382 West 9th Street
Cleveland, Ohio 44113

Dear Mr. Matitia:

You have requested a tariff classification ruling for a women's leather casual shoe that you plan to import from Korea or Taiwan. The submitted sample of this slip-on style has a moc toe and a stitched-on plastic sole.

You suggest that this shoe is classifiable under item 700.20, Tariff Schedules of the United States (TSUS), a provision for turn or turned footwear of leather. However, the construction does not meet the requirements for such footwear.

In Daniel Green Shoe Co. v. United States, 262 F. Supp. 375, 58 Cust. Ct. 7, C.D. 2868 (1967), appeal dismissed, 54 CCPA 143 (1967), the Customs Court held that the common meaning of the term "turn," indicating the process and construction of a shoe sewn inside out and turned right side out, applied in interpreting the turned footwear provision. We have ruled that the term applies to a shoe on which a vamp plug and pieces of vamp trim are laced to the rest of the upper while the upper is inside out and before the entire upper is turned right side out and lasted. See file MCS 455.44 T of April 15, 1970. It is our understanding, however, that the submitted sample is constructed in a different fashion, i.e., the upper is turned down and stitched to the sole, and then the upper is turned up and the moccasin vamp, or toe plug, is added.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B8

Since the entire upper is not turned inside out but merely a part of it is turned down while the sole is stitched on, the shoe cannot be classified as turned footwear. Rather, it is classified under item 700.45, TSUS, assuming a value of over $2.50 per pair.

Sincerely,

William P. Schaffler

Mr. Leonard M. Shayne
Leading Forwarders Incorporated
One World Trade Center, Suite 1923
New York, New York 10048-0150

Dear Mr. Shayne:

You have requested a ruling on the tariff classification of rosettes on ribbon bows that are products of the Philippines. Samples were submitted along with your letter dated April 22, 1986.

The samples consisting of rosettes sewn on ribbons are constructed of ribbon made of man-made fiber woven fabric. The rosettes are formed by crimping the ribbon into a flower-like article. The flower is sewn onto a ribbon which has been folded over to form a bow. The sole difference between the samples is the presence of a bead sewn on the center of one of the samples.

Headnote 2(a), Subpart B, Part 4, Schedule 3, Tariff Schedules of the United States Annotated (TSUSA), states that "the term "motifs" embraces individual textile pieces such as, but not limited to, labels, badges, emblems, insignia, initials, numbers, and ornaments, designed and almost wholly used for incorporation in, or appliqueing on, wearing apparel, furnishings, and other textile articles..."

In our response to Internal Advice Request No. 160/81 dated March 23, 1982, file 069126, we ruled that similar articles were precluded from classification as motifs, because they did not fall within a class or kind of article "designed and almost wholly used for" the purposes specified in Headnote 2(a), TSUSA. Thus, these articles are not classifiable as motifs.

You believe that the rosettes ornament the underlying bows, which in your opinion make the articles classifiable in item 386.1343, TSUSA, dutiable at the rate of 12.5 percent ad valorem. Products of the Philippines that are classifiable in this provision are eligible for an exemption from duty under the Generalized System of Preferences.

Headnote 3, Schedule 3, TSUSA, lists the features that can ornament textile fabrics for tariff purposes. Beads are one of the listed features. Generally, a feature ornaments an article if it serves a primarily decorative rather than a

B10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

primarily functional purpose. But if the feature, such as beading, forms a design that symbolizes or identifies something, then it creates the motif itself and is considered functional. See, file 040281 of May 10, 1976, where Headquarters ruled that woven fabric that was embroidered with varicolored yarns to simulate a peacock was not an ornamented motif. On the other hand, if the feature is essentially irrelevant in the formation of a design, it is considered to be decorative.

Having examined the samples, it is our view that neither item is classifiable as an oramented article. The rosette doesn't ornament the bow; it completes the article. All the pieces of the items in question represent parts of a flower. The bow represents the flower receptacle; the rosette typifies the petals; and the bead corresponds to the pistil.

The appropriate tariff classification for these items is under the provision for other articles not specially provided for, not ornamented, of man-made fibers in item 389.6270, TSUSA, with duty at the rate of 4 cents per pound plus 10 percent ad valorem.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

818792

Mr. J.F. Fritz
Norman Krieger, Inc.
5761 Imperial Highway
Los Angeles, California 90041

Dear Mr. Fritz:

You have requested a ruling on the tariff classification of rosettes from China and Hong Kong. Samples accompanied your letter dated May 12, 1986.

Two of the samples represented by style number LP 808 are identical. The rose-like articles are made from woven ribbon that have been stitched to ribbon approximately 3/4 inch long that has been folded over to simulate leaves. The third sample differs only in that the rosette and leaves have been stitched to the center of a ribbon that has been formed into a bow. You indicate that the articles will be imported in chief value of vegetable fiber, silk, or man-made fiber, and will be used on ladies' lingerie.

Headnote 2(a), Subpart B, Part 4, Tariff Schedules of the United States (TSUS), provides that the term "motifs" embraces individual textile pieces designed and almost wholly used for incorporation in, or appliqueing on wearing apparel, furnishings, and other textile articles.

In our response to Internal Advice Request No. 160/81 dated March 23, 1982, file 069126, we ruled that similar articles were precluded from classification as motifs, because they did not fall within a class or kind of article "designed and almost wholly used for" the purposes specified in Headnote 2(a). They were used also as decorations on bottles, greeting cards, and figurines. Though the items here will be used on lingerie, they belong to a class or kind of article that does not meet the stated purposes of the headnote.

Style LP 808 is classifiable under the provision for other articles not specially provided for, not ornamented, and depending on the component material in chief value, in item 389.30, Tariff Schedules of the United States (TSUS), with duty at the rate of 8 percent ad valorem if in chief value of silk; in item 387.37, TSUS, dutiable at the rate of 4.8 percent ad valorem if in chief value of vegetable fiber other than cotton; in item 386.53, TSUS, dutiable at the rate of 8.2 percent ad valorem if in chief value of cotton; and in item

B12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

389.62, TSUS, with duty at the rate of 4 cents per pound plus 10 percent ad valorem if in chief value of man-made fibers.

With regard to the remaining sample, it is our view that the rosette with leaves ornaments the bow. Thus the article is classifiable in item 386.13, TSUS, with duty at the rate of 12.5 percent ad valorem if in chief value of silk, man-made fibers or vegetable fibers other than cotton. If in chief value of cotton, it is classifiable in item 386.04, TSUS, with duty at the rate of 25 percent ad valorem. Products of Hong Kong that are classifiable in item 386.13, TSUS, are eligible for duty-free treatment under the Generalized System of Preferences upon compliance with all applicable regulations.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Randy Swords
Midway Sales, Inc.
P.O. Box 16509
Columbus, Ohio 43216-6509

Dear Mr. Swords:

In New York Ruling Letter (NYRL) No. 815352 dated March 18, 1986, you were advised that the KSC-2 cyclocomputer is more than a bicycle speedometer and therefore is classifiable under the provision for other revolution counters, production counters, taximeters, odometers, pedometers and counters similar to the foregoing articles in item 711.98, Tariff Schedules of the United States (TSUS), and dutiable at the rate of 0.6 percent ad valorem.

We have reconsidered the result reached in (NYRL) No. 815352 and have concluded that the KSC-2 cyclocomputer is more specifically provided for as a bicycle speedometer under item 711.93, TSUS, with duty at the rate of 18.3 percent ad valorem. Therefore, the ruling issued to you by our New York office is revoked insofar as it is inconsistent with the result reached in the enclosed copy of a ruling (our file No. 077865 c) dated September 26, 1986, issued to the law firm of Bellsey and Baker. This ruling will be effective as to the subject merchandise entered or withdrawn from warehouse for consumption by your client after the date of this letter.

Herbert T. Posner, Esq.
Posner & Stedina
630 Third Avenue
New York, New York 10017

Dear Mr. Posner:

On behalf of your client Gates-Mill, Inc., you have asked us to determine the country of origin of certain gloves to be imported from Romania.

You have submitted samples of an outer shell of a glove, a lining, and an assembled glove. The sample appears to be men's, and has seams stitched on the outside. You state that the outer shell is of lambskin, entirely fabricated and manufactured in Romania. The lining is knit, of cashmere, made in South Korea and transshipped through the United States from South Korea to Romania. We assume that all the requirements for transportation and exportation entries of the linings will be met.

The articles to be imported into the United States will be the finished gloves. The linings will be permanently sewn and hemmed into the shells and will no longer have a separate commercial identity or use. The merchandise will thus be classifiable as leather gloves, products of Romania.

The Harmonized Commodity Description and Coding System (HS) is scheduled to replace the TSUS as the tariff code of the United States on January 1, 1988. For your information, the HS provision applicable to the above-described merchandise appears to be subheading 4203.29.00, other gloves. This information is intended to assist you in becoming familiar with HS tariff classifications. It is not an official ruling of the Customs Service and may not be challenged by you at this time. It is anticipated that we will begin issuing administrative HS tariff classification rulings on or about July 1, 1987 (public notice will be given of the exact date such rulings will begin). If you wish an HS tariff classification ruling, you may request one at that time.

Sincerely,

Harvey B. Fox
Director, Classification
and Value Division

Mr. Peter P. Genero
Genero, Inc.
P.O. Box 144257
Coral Gables, Florida 33114-4257

Dear Mr. Genero:

In your letter of August 8, 1986, you requested a tariff classification covering shakes and shingles, made of Spanish cedar (Cedrela odorata) produced in El Salvador.

The merchandise at issue is wood shingles and shakes, which are relatively thin, tapered pieces of wood with parallel edges. Shakes are generally longer, narrower and thicker than shingles. Both are used for covering roofs and side walls of houses and other structures. Wood shakes and shingles are provided for eo nomine in item 200.85, Tariff Schedules of the United States (TSUS).

Presidential Proclamation 5498 of June 6, 1986, increased the duty on wood shingles and shakes of Western red cedar imported into the United States. Western red cedar (Thuja plicata)is a species of tree generally found in the states of Oregon and Washington and in British Columbian, Canada.

The shingles and shakes with which you are concerned are made of Spanish cedar (Cedrela odorata). Spanish cedar generally comes from Central and South America. Spanish cedar (Cedrela odorata) is a different species from Western red cedar (Thuja plicata), therefore Presidential Proclamation 5498 does not apply to importations of Spanish cedar shakes and shingles.

Shingles and shakes of Spanish cedar (Cedrela odorata) are classified under the provision for shakes and shingles in item 200.8540, TSUS, and are free of duty.

Sincerely,

Harvey B. Fox
Director, Classification
Value Division

Re: Application for Further Review of New York Protest No. 1001-0-010311

Dear Sir:

This subject application for further review is against your classification of certain coatings under item 182.99, Tariff Schedules of the United States. Protestant claims that coatings Nos. 9835 and 9836 are classifiable as confectioners' coatings, item 156.47, TSUS, at 2.5 percent ad valorem, and Coatings Nos. 9855 and 9861 are classifiable as sweetened chocolate in bars or blocks weighing 10 pounds or more, item 156.25, TSUS, at 0.4 cent per pound.

Protestant claims further that their proposed classifications are based upon the physical composition of the merchandise and upon the existence of established and uniform Customs classification practices consistent therewith, and any informal Customs guidelines contrary to the claimed classifications of Coatings Nos. 9855 and 9861 are arbitrary and unreasonable in light of the common meaning and commercial understanding of the tariff term "chocolate." No additional argument has been submitted by the protestant.

Absent additional information, we have no basis upon which to grant this claim. Accordingly, you are directed to deny this protest. Please see that a copy of this decision is attached to the Customs Form 19 Notice of Action to be sent to the protestant.

Sincerely,

Arthur P. Schaffner

Ms. Angela De Gaetano
Customs Information Exchange, Room 450
6 World Trade Center
New York, New York 10048-0945

Dear Ms. De Gaetano:

A Customs Form 6431 dated January 16, 1981, from the port of Los Angeles, California, concerns entry No. 81-108025-1, covering a shipment of natural hair lip brushes from Japan to Garrett Hewitt International, Menlo Park, California. This difference of opinion is listed as the ninth item on page 2 of C.I.E. N-89/79, Supplement 47, of May 1986.

This port difference was evidently lost in transmission between New York and Customs Headquarters. The file was reconstructed by New York and was received by this office on October 7, 1986.

The merchandise at issue is natural hair lip brushes, with plastic handles and caps, valued at 23 cents each. One port claims that such brushes are classified under the provision for artists' brushes and hair pencils, valued over 10 cents each, in item 750.60, Tariff Schedules of the United States (TSUS). This port cited Customs Headquarters Ruling Letter (HRL) 005951 of October 26, 1972, and Solo Horton Brush Co. (Inc.) v. United States, 63 T.D. 143, T.D. 46123 (1933).

The second port initially claimed that such brushes were classified under the provision for toilet brushes, except tooth brushes, valued not over 40 cents each, in item 700.45, TSUS. It cited United States v. M. Grumbacher, 27 CCPA 166, C.A.D. 80 (1939) in support of its position.

In the intervening years that this difference was lost, however, the second port has changed its opinion and has come to agree with the first port that such lip brushes are classified in item 750.60, TSUS. No further resolution of the difference is necessary. The natural hair lip brushes are classified under the provision for hair pencils, valued over 10 cents each, in item 750.60, TSUS.

Sincerely,

Arthur P. Schaffer

Ms. Angela De Gaetano
Customs Information Exchange, Room 450
6 World Trade Center
New York, New York 10048-0945

Dear Ms. De Gaetano:

A Customs Form 6431 dated June 24, 1980, from the port of Mobile, Alabama, concerns entry No. 80-105131-3 dated May 12, 1980, covering a shipment of parts for plastic cassette shells with no tabs from Japan to Sony Magnetic Products Inc. of America, in Dothan, Alabama. This difference of opinion is listed as the eighth item on page 2 of C.I.E. N-89/79 of May 1986. This difference was evidently lost in transmission between New York and Customs Headquarters. It was reconstructed by New York and was received in this office on October 8, 1986.

The merchandise at issue is parts of plastic cassette shells with no tabs, specifically spools, anti-looseners and shells. One port argues that these parts are classified under the provision for tape recorders and parts thereof, in item 685.40, Tariff Schedules of the United States (TSUS). It cites ORR Ruling Letter 72-0359 of September 29, 1972, in support of its position. The other port argues that the parts are not parts of tape recorders, but are classified under the provision for other articles not specially provided for, of rubber or plastics, in item 774.55, TSUS.

ORR Ruling 72-0359 concerns a blank cassette shell with tabs which will allow the cassette to record. It deals with a complete shell containing tabs, not the instant incomplete merchandise. The instant merchandise is parts of cassette shells with no tabs, which are not capable of causing the tape recorder to record, therefore ORR Ruling 72-0359 is distinguishable. The spools, shells and anti-looseners are parts of the cassette shells with no tabs, not parts of the tape recorders, therefore item 685.40, TSUS, is not applicable. Inasmuch as there is no more specific provision, item 774.55, TSUS, applies to these parts.

Sincerely,

Arthur P. Schaffer

Ms. Angela De Gaetano
Customs Information Exchange, Room 450
6 World Trade Center
New York, New York 10048-0945

Dear Ms. De Gaetano:

A Customs Form 6431 dated April 21, 1981, from the port of New Orleans, Louisiana, concerns entry No. 81-800076-8 dated October 9, 1980, covering a shipment of embroidered rayon birds, fish and animals from Hong Kong to AR Casavant DBA ARC Products. This difference of opinion is listed as the second item on page 2 of CIE N 89/79, Suppl. 48, dated October 1986. This difference was evidently lost in transmission between New York and Customs Headquarters. It was reconstructed by New York and was received in this office on October 8, 1986.

The merchandise at issue is embroidered rayon birds with strings, embroidered rayon fish with strings, and embroidered animals with strings. One office believes that the stuffed rayon figures are classified under the provision for articles not specially provided for, of textile materials, other articles ornamented, other, other, in item 386.09 (currently 386.13), Tariff Schedules of the United States (TSUS). It argues that the stuffed figures are too delicate and decorative to be used as toys and that they have strings attached. It cites General Headnote 10(e)(1), TSUS, ORR Letter 465-70, Legal Determination 3611-83, and Advance Solvents & Chemical Corp. v. United States, 34 CCPA 148, C.A.D. 358 (1974) in support of its position.

The second port maintains that the stuffed figures are classified under the provision for toy figures of animate objects (except dolls), not having a spring mechanism, stuffed, valued over 10 cents per inch of height, in item 737.30, TSUS. It argues that the stuffed figures are of a class or kind of animal chiefly used for amusement.

These articles are pleasing to the eye and very decorative. There is fine workmanship involved, and the colors are bright and handsome. Many toys are attractive and decorative, however, and many stuffed animals adorn beds or shelves.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

c7

These figures are not life-like representations of animals, but not all representations of animals are as highly evolved as, for instance, Mickey Mouse. Nor do the colors and ornamentation of a crazy quilt giraffe make it any less a toy. These animals are highly decorative, but they are still part of the class or kind of animals chiefly used for amusement. We find that the instant stuffed rayon articles are classified under the provision for toy figures of animate objects, in item 737.30, TSUS.

Sincerely,

Arthur P. Schaffner

for Harvey B. Fox
Director, Classification
and Value Division

FROM : Director, Classification and Value Division

SUBJECT: Request for Internal Advice No. 62/86, Your File CLA-2 K:C:D: VI DN

You initiated this request for internal advice on behalf of Viking Unlimited, Inc. It concerns the proper tariff classification of bullion-embroidered parts of visors for caps used by the U.S. military.

A sample of the imported article, a product of India, was submitted. It consists of a crescent-shaped piece of woven black wool fabric embroidered in gold bullion with two clusters of oak leaves. The embroidered fabric is glued to a paper backing.

The importer's position is that these articles are properly classifiable under item 748.12, Tariff Schedules of the United States, a provision including insignia of bullion for uniforms of the U.S. armed forces. You have classified them under item 384.16, Tariff Schedules of the United States (TSUS), as ornamented women's wearing apparel, of wool. For the reasons stated below, we are in agreement with the importer.

There is no factual dispute here. You agree, having reviewed the information submitted by the importer, that the embroidery is of bullion and that the articles are for use on U.S. military uniforms. Apparently you do not disagree that they are marks of military rank, as stated in the submitted letter of May 12, 1986, to Viking Unlimited from the Chief, Clothing and Uniforms Division, Department of the Army. Assuming these facts, we conclude that these configurations of oak leaves fall squarely within the definition of "insignia," "a distinguishing mark of authority, office, or rank."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

C9

Webster's Third New International Dictionary (unabridged ed., 1965). They are clearly classifiable under item 748.12, TSUS, since they meet all the requirements of that provison: (1) insignia; (2) of bullion (i.e., in chief value of bullion); (3) for uniforms of the U.S. armed forces.

The Sixth Supplemental Report, of May 23, 1963, to the Tariff Classification Study set out the purpose of the new provison, item 748.12: "to preserve the existing tariff treatment of certain insignia currently classified in paragraph 385, Tariff Act of 1930." The Customs Court had determined, in Gemsco, Inc. v. United States, Abs. 63445, 43 Cust. Ct. 372 (1959), that certain insignia of bullion, required to be worn as part of U.S. naval uniforms, were classifiable under that paragraph. Applying the classification principle set out in that case, Customs ruled, in C.I.E. 755/61, that fabric visor toppings having gold bullion affixed in a leaf design through the use of a utilitarian stitch, and required to be worn by certain U.S. military personnel, were classifiable in paragraph 385. Thus the embroidered visor parts in question here are clearly within the intended scope of item 748.12, TSUS.

You state that the embroidered fabric pieces are "more than just insignias." No explanation is given. You suggest that they are classifiable as wearing apparel. At best, they would be parts of wearing apparel. But item 748.12, TSUS, specifies insignia "for uniforms," i.e., articles that will be worn.

You also state that these articles are "more specifically provided for as parts of hats" in Subpart F of Part 6, Schedule 3, TSUS. This argument is without merit; there is no such provision in Subpart F. In the past, we have ruled that certain hat parts were classifiable as wearing apparel in Schedule 3. However, those articles were of textile materials and were not otherwise specifically provided for. The airline pilots' cap visor the subject of one ruling did not meet the requirements of the insignia provision because it was not for U.S. military uniforms. Insignia of bullion for U.S. military uniforms are provided for eo nomine in item 748.12, TSUS, and are properly classifiable thereunder.

Ms. Peggy S. Easton
Fritz Companies, Inc.
17851 Englewood Drive
Cleveland, Ohio 44130

Dear Ms. Easton:

In your letter of September 10, 1986, on behalf of your client Creative Marketing Concepts, Inc., you requested a tariff classification for a floral arrangement insert from Taiwan. You submitted a sample along with your letter.

The sample submitted consists of a flat paper doll, approximately 7 inches tall, through which is inserted an embroidered cotton handkerchief which serves as a "dress" for the doll. There is a wooden stick taped on the back of the item for insertion in floral arrangements. The component material in chief value is the cotton handkerchief.

You state that the item is used in the floral industry and that the ultimate consumer may remove the "dress" from the doll and use it as a handkerchief.

The item is not classifiable as a doll or a toy because it is one-sided (i.e., only one side resembles a woman's figure, while the other side is blank). It would not be classified as a handkerchief since it is not marketed as such.

The floral arrangement insert is classifiable under the provision for ornamented articles not specially provided for, of textile materials, of cotton, other, in item 386.0430, Tariff Schedules of the United States (TSUS), dutiable at 25 percent ad valorem.

The Harmonized Commodity Description and Coding System (HS) is scheduled to replace the TSUS as the tariff code of the United States on January 1, 1988. For your information, the HS provision applicable to the above-described merchandise appears to be Subheading 6307.90.80, other made up textile articles, other, other. This information is intended to assist you in becoming familiar

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C12

with HS tariff classifications. It is not an official Customs Service ruling and may not be challenged by you at this time. It is anticipated that we will begin issuing HS tariff classification rulings on or about July 1, 1987. (Public notice will be given of the exact date such rulings will begin.) If you wish a HS tariff classification ruling, you may request one at that time.

Sincerely,

Harvey B. Fox

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

NOV 6 1986

REFER TO

CLA-2 CO:R:CV:G
079222 SM

[redacted]

Dear [redacted]

On behalf of [redacted], you have requested a tariff classification ruling for an article known as the "Magic Roll." A sample and diagram were submitted. The article is marked "Made in Italy."

The Magic Roll is a hand-held paint roller that incorporates a hand-operated suction pump in its plastic handle. A plastic tube runs from the end of the handle to a plastic paint reservoir that has a synthetic-fiber shoulder strap. The pump creates a vacuum, drawing paint from the reservoir through the tube to the surface of the sponge rubber paint roller. The Magic Roll is to be imported assembled, and it is anticipated that it will be used mainly by householders.

You suggest that this article is classifiable in Schedule 6, Part 4, under item 662.50, Tariff Schedules of the United States (TSUS), a provision for "[m]echanical appliances, whether or not hand operated, for projecting, dispersing, or spraying liquids or powders . . . ". However, Headnote 1(v) of Part 4 provides that that part does not include "articles and parts of articles specifically provided for elsewhere in the schedules." Paint rollers are specifically provided for elsewhere in the schedules, namely under item 750.80, TSUS, in Part 8 of Schedule 7.

You state that the Magic Roll is not "simply" a paint roller, but "a specially constructed, hand-operated mechanical device used for applying paint directly onto the surface to be painted." We assume that you mean that because of the presence of the pump in the handle, the article constitutes more than a paint roller, and therefore cannot be classified as such. However, this article falls squarely within the common meaning of the term "paint roller." Webster's Third New International Dictionary (unabridged ed., 1965) gives the following definition of the term:

C14

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

> a roller that consists typically of a rotating cylinder about two inches in diameter and six inches in length covered with an absorbent material and mounted on a handle so that the cylinder can be dipped into paint or otherwise (as through a hollow feed center) be supplied with paint and rolled over a flat surface (as a wall) so as to apply the paint[.]

Inasmuch as paint rollers by definition can have alternate paint feeding mechanisms, the addition of the hand pump will not take the Magic Roll out of the provision for paint rollers. Further, the Magic Roll functions like any other paint roller in that it spreads paint on a surface by means of a rotating absorbent roller mounted on a frame. You state, in fact, that applying paint directly onto the surface to be painted is the sole purpose and use for the article.

079222

We have ruled previously that paint rollers with various special features were still classifiable under the eo nomine provision. In CIE 218/65, for example, it was determined that a design roller with a separate aluminum roller that fed paint from a paint tank to the design roller was a paint roller for tariff classification purposes. The Magic Roll also falls within item 750.80, TSUS.

The Harmonized Commodity Description and Coding System (HS) is scheduled to replace the TSUS as the tariff code of the United States on January 1, 1988. For your information, the HS provision applicable to the above-described merchandise appears to be subheading 9603.40.00, which includes paint rollers. This information is intended to assist you in becoming familiar with HS tariff classifications. It is not an official ruling of the Customs Service and may not be challenged by you at this time. It is anticipated that we will begin issuing HS tariff classification rulings on or about July 1, 1987 (public notice will be given of the exact date such rulings will begin). If you wish an HS tariff classification ruling, you may request one at that time.

Sincerely,

Arthur Schayes

TO : Area Director of Customs
New York Seaport
New York, New York 10048

FROM : Director, Classification and Value Division

SUBJECT: Internal Advice Request No. 10/86 Concerning the Tariff Classification of Infants' Sets

This request for Internal Advice was initiated by counsel on behalf of Baby Togs, Inc.

FACTS:

The merchandise in question consists of two and three-piece garments for infants. A variety of sample garments were submitted. They are all woven ornamented garments in chief value of man-made fibers. Style 29073 comprises a coat, dress, and hat; styles 26233 and 62250 include a dress, panty and hat; style 58020 consists of a shirt, shorts and hat; styles 71206 and 50239 comprise a playsuit and hat; and style 25244 consists of a dress and hat.

ISSUE:

The ultimate issue to be resolved is whether these two and three-piece garments are classifiable under a single tariff item described as infants' sets. This, in turn, depends on whether Headnote 3, Part 6, Schedule 3 of the Tariff Schedules of the United States (TSUS) precludes the classification of these garments as an entirety.

D2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

LAW AND ANALYSIS:

The Congress enacted the headnote as Section 122 of the Trade and Tariff Act of 1984, Pub. L. 98-573. The headnote provides, in pertinent part, that "each garment is to be separately classified under the appropriate tariff item, even if two or more garments are imported together and designed to be sold together at retail."

The headnote continues the general direction of Customs over the past several years on the subject of entireties by limiting, wherever possible, and consistent with legislative intent, the scope of entireties as applied to wearing apparel. The headnote virtually eliminates the tariff classification of two or more garments together as an entirety when they may be classified in separate items. The headnote, therefore, eliminates the tests used in the past, such as color coordination, and substitutes a prohibition against finding entireties where two or more garments are involved.

Paragraph (b)(vi) of the foregoing headnote excludes infants' sets designed for children who are not over two years of age from the scope of the headnote. The effect of this exception is to classify infants' sets comprising two or more garments according to the principles that existed before the enactment of the headnote. In judging whether two or more garments are classifiable as an infants' set, Customs will apply the doctrine of entireties as

079855

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D3

articulated in Miniature Fashions v. United States, 54 CCPA 11, C.A.D. 894 (1966). In reversing the trial court, our appellate court ruled that cabana sets described as "two-piece shirt-short sets" were classifiable as an entirety based on the consideration of certain commercial tests. These tests included the way the garments are known and marketed, their use, their construction, the design as to fabric, print, and color match, and the way they may be worn together.

The inquirer contends that the headnote is applicable to wearing apparel, whether classifiable in Schedule 3 or Schedule 7, based on past administrative and judicial practice. The inquirer cites Headquarters Ruling Letter 059330 dated September 5, 1978, where Customs ruled that a jockey shirt and cap constituted an entirety for classification purposes, even though the items were classified in separate schedules.

In J. C. Penney Purchasing Corporation v. United States, 77 Cust. Ct. 48, C.D. 4671 (1976), the Customs Court held that a three-piece ensemble consisting of a leather jacket, a textile shell and textile pants was classifiable as an entirety.

These judicial and administrative decisions classified articles in Schedule 3 and Schedule 7 as entireties. Yet, it is your view that the headnote requires separate classification in Schedule 7 for hats and caps. This position is based on the language in Headnotes 1 and 3 in Schedule 3, Part 6, TSUS. Headnote 1, Part 6, Schedule 3, TSUS, provides in relevant part, "[t]his part does not cover -- (1) wearing apparel of textile materials provided for in Schedule 7." Read together

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D4

079255

with Headnote 3, Part 6, Schedule 3, TSUS, you believe that woven hats in months' sizes are excluded from Schedule 3, because they are provided for in Schedule 7. As you see it, this position is supported by Headnote 1(iii), Subpart A, Part 1, Schedule 7, TSUS, and Headnote 1(a), Subpart B, Part 1, Schedule 7, TSUS, which excludes infants' knit footwear and headwear from Schedule 7.

We regard Headnote 3, Part 6, Schedule 3, TSUS, as applicable to wearing apparel, whether classifiable in Schedule 3 or Schedule 7. This new headnote does not contain any qualifying language, unlike Headnotes 1 and 2 of Part 6 to Schedule 3. The exception makes the classification principles applicable to infants' sets remain as they were before the enactment of the new headnote.

As for the combinations themselves, it is our view that woven textile hats and caps imported with coordinated dresses, shirts, shorts, and playsuits satisfies the traditional tests for classifying these infants' sets as entireties. The components are imported as a unit and are stated to be bought and sold as a unit. The hats and caps are coordinated in terms of fabric, color, and print with the remaining component.

The garments before us consist of hats and caps with coordinated lightweight shorts, playsuits, dresses, and coats. It is common for infants to wear hats to protect their sensitive scalps. That the baby may not wear both garments together is not a factor we regard as controlling. Under Miniature Fashions, supra, the capability for wearing one component of the cabana set was not decisive.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

079255

D5

With respect to the remaining combination, style 29073, consisting of a coat, dress, and hat, it is our conclusion that the dress and hat meet the standards for classification as an entirety under the provision for infants' sets. The coat, however, must be classified separately. This is so, because the interpretation of the words "infants sets" depends on their meaning at the time of the statutory enactment of Section 122 of the Trade and Tariff Act of 1984. Customs did not classify similar combinations containing coats as infants' sets.

JAN 3 1974

VES-5-R:CD:C
100669 R

District Director of Customs
Seattle, Washington

Director, Carriers, Drawback and Bonds Division R:CD

Section 4.33, Customs Regulations-Diversion of cargo.

This is with reference to your memorandum of June 11, 1973, advising of a situation in your area wherein a vessel files a manifest listing cargo intended for various United States West Coast ports but subsequently some or all of these ports are dropped from the vessel's itinerary. The vessel will proceed directly to Vancouver, B.C., and there discharge cargo which will usually be transported to the United States on land. We regret the delay in responding to your memorandum.

As the diversions to Vancouver are because of business reasons, and not because of an emergency, you ask whether an approved procedure exists for this type of diversion and amendment of the manifest. You state that it appears that vessel convenience is not a proper reason to ordinarily permit the application of section 4.33(d), Customs Regulations.

Title 19, United States Code, section 1449, provides that merchandise imported on a vessel shall be unladen at the port to which the vessel is destined. However, the statute provides two exceptions. The second exception empowers Customs authorities to authorize the vessel to proceed to a port of entry other than the one to which it was destined if an emergency exists at the original port of destination and there unlade the merchandise. Through the promulgation of section 4.33(d), Customs has extended this exception to include diversions to foreign ports as experience has demonstrated that where emergencies exist at United States ports, a foreign port may be a more appropriate port to which to divert under the particular circumstances. Headquarters is of the opinion, however, that to further extend the Regulations

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D7

to cover diversions to foreign ports where no emergency exists would not be conformable with the purpose and meaning of the statute in general or the second exception in particular.

Accordingly, a vessel which has made formal entry and filed a manifest showing inward foreign cargo for other domestic ports cannot be authorized to proceed to a foreign port under circumstances not constituting an emergency.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

[redacted]

D8

VES-5-19-R:CD:C
100835 R

Regional Commissioner of Customs
Houston, Texas 77002

Dear Sir:

This is with respect to your letter of September 24, 1973, in which you commented on the procedure to be followed when cargo which is manifested for one domestic port is overcarried to another such port. The intentional overcarriage of cargo is also the subject of Headquarters letter of August 30, 1973, to [redacted], on which you also commented. The situation under consideration is one wherein a vessel desires to depart one domestic port at which it has unladen foreign cargo for another domestic port in order to unlade additional foreign cargo, which consists in part of cargo which was manifested for the first port but which, due to time limitations, cannot be readily ascertained for the diversion procedure set forth in section 4.33 of the Regulations before the vessel's departure.

You suggest that the Regulations be amended to provide that, in the above-described situation, when the vessel arrives at the second port, the overcarried cargo be listed on a discrepancy report so that the cargo will in effect be included in the manifest filed at the second port. A copy of the discrepancy report would be sent to the first port to account for the shortage there.

Title 19, United States Code, section 1443, provides that before a vessel with residue foreign cargo departs from the port of first arrival to another domestic port the master must obtain with the permit to proceed a certified copy of the vessel's manifest showing the merchandise unladen at that port and the merchandise

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ——

D9

remaining on board the vessel. Title 19, United States Code, section 1445 provides for a penalty of $500 for non-compliance. Therefore, although we appreciate that exigencies of trade may occasionally prevent compliance by amending the manifest in accordance with section 4.33(c), and recognize that such circumstances may be taken into account in considering a mitigation of any penalties assessed, prescribing a procedure in the Regulations which is not in accordance with law cannot, of course, be considered.

Except for statutory provisions relating to residue cargo and bulk cargo, title 19, United States Code, section 1449 provides for Customs approval of vessel and cargo diversions only in cases of emergency. Therefore, if the manifest cannot be amended in accordance with section 4.33(c) prior to the vessel leaving the first port of arrival, the merchandise cannot be treated as residue cargo. The question then becomes whether or not merchandise not covered by title 19, United States Code, sections 1442 or 1447, may be overcarried. As a general rule, exceptions in a statute must be construed strictly within the language of the exception. Since section 1449 only permits merchandise not covered by sections 1442 and 1447 to be overcarried when there is an emergency, the question must be answered in the negative. In accordance with the aforesaid rule of statutory construction, we cannot expand the exception to cover a situation where no emergency exists.

Sincerely yours,

J. P. Tebeau
Director
Carriers, Drawback and Bonds Division

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

[redacted]

100835

D10

VES-8-01-R:CD:C
100860 R

District Director of Customs
Houston, Texas 77052

Dear Sir:

This is with reference to your letter of October 18, 1973, concerning the penalty in the amount of $500 assessed under title 19, United States Code, section 1584 against the master of the Peruvian [redacted] since molasses described on the manifest was not found on board the vessel. The explanation given on the Discrepancy Report, CF 5931, was that the merchandise was not delivered and evidence confirming non-importation would be furnished. A copy of a "freight payment support" from the importers was furnished and you ask if such evidence is acceptable. We regret the delay in responding to your inquiry.

Section 4.12(a)(2), Customs Regulations, requires that shortages be reported on CF 5931 and that satisfactory evidence to support a claim of nonimportation shall be obtained and retained in the carrier's files for one year. Whether or not evidence is "satisfactory" is a matter for the district director to determine. As stated on page 69 of the 1974 edition of the Quantity Control Manual, satisfactory evidence consists of a statement by the master, a statement by the master's agent, a vessel log extract, or other evidence considered satisfactory by the district director. Therefore, while we might note that the evidence presented seems reasonably satisfactory to us, the determination is one for your to make.

It is noted that the evidence was not presented until September 14, 1973. While the CF 5931 dated March 22, 1973, states that such evidence will be furnished

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D11

within 60 days, and therefore the evidence was not timely furnished, the explanation given by the vessel agent in his letter of October 5, 1973, appears reasonable. In any case, neither law nor regulation provide that such evidence must be filed within 60 days and therefore no penalty is incurred for failure to do so.

Sincerely yours,

(SIGNED) J. P. TEBEAU

J. P. Tebeau

[redacted]

1008960

D12

1975

VES-5-23-R:CD:C
101970 R

[redacted]

Dear [redacted]

This is with reference to your telegram dated October 24, 1975, in which you advise that [redacted] transports containerized cargo in United States-flag, United States-built vessels from New York via various foreign ports to Puerto Rico. The cargo is then transferred to "feeder" vessels and transported to the Virgin Islands.

You contend that because you are required under section 4.82(b), Customs Regulations, to prepare and have certified a coastwise manifest prior to departure for the foreign ports, you are placed at a disadvantage in relation to your competitors. You state that your competitors ship directly from the United States to the Puerto Rico Virgin Islands and therefore can accept and load shipments for the Virgin Islands up to the time of sailing with no Customs requirement for a manifest. The result is marketing problems and excessive operating costs for your firm. The alternatives you have are refusing cargo after a stated period of time so that manifests may be prepared and certified prior to sailing or delaying departure and incurring the extra heavy costs, especially if overtime, of stevedore labor, tugboat services, etc.

You ask for permission to present the coastwise manifest to Customs up to 96 hours after the vessel sails and

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D13

[redacted]

waiver of the requirement that the coastwise manifest be certified.

The requirement in the Customs Regulations for a certified manifest is based upon title 19, United States Code, section 293, which states in pertinent part with respect to registered vessels of the United States engaging in coastwise trade which touch at intermediate foreign ports:

> ...All such vessels shall be furnished by the collectors of the ports at which they shall take in their cargoes in the United States, with certified manifests, setting forth the particulars of the cargoes,...

The purpose of the certification is to obviate the necessity of having the master of the vessel account for the coastwise merchandise in the manner which would be required if the vessel were arriving solely from a foreign port. In the latter case, of course, the coastwise merchandise would be shown on the inward foreign manifest and the merchandise entered as American goods returned. By having the Customs officers at the domestic port of lading certify to the coastwise manifest, we are in a position to expeditiously clear the coastwise merchandise at the next domestic port of call, even though the vessel is, in fact, arriving from a foreign port. Of course these requirements are applicable to all vessels, not only [redacted], where the vessel is touching at a foreign port while engaging in coastwise trade.

In view of the foregoing your request is necessarily denied.

In any case, this agency is without authority to waive compliance with the navigation laws except upon a finding that such action is necessary in the interest of national defense (Act of December 27, 1950, 64 Stat. 1120 note preceding 46 U.S.C. 1). As it does not appear that

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D14

018101

[redacted]

national defense is here involved, the Customs Service must, in conformance with the statute, require the submission of coastwise manifests for certification at the various United States ports of lading on registered vessels of the United States which touch at foreign ports while in the coastwise trade.

Sincerely yours,

(SIGNED) J. P. TEBEAU

J. P. Tebeau
Director
Carriers, Drawback and Bonds Division

JUL 1 5 1976

VLS-8-03-R:CD:C
101951 BJF

[redacted]

Dear [redacted]

This is in reply to your letters of December 3, 1975, and January 12, 1976, in which you state that your firm has in the past indicated "on the Customs manifest" the measurement of forest products in footboard measurement rather than weight. You state that certain Customs offices have stated that they will require that shipments of lumber include, on the manifest, a reference to the weight of the lumber and you ask whether the requirement is necessary since it would involve a hardship on your organization. You also ask whether the Customs Service will adopt the IMCO recommendations for the Cargo Declaration in 1976 and, if so, when the change will be made effective.

We have queried the various Customs Regions as to whether, on the inward foreign manifest, units of measurement other than weight can be used if those units are in general use in the trade. We have been advised by the Chief, Cargo Processing Branch, that the use of the gross weight on manifests describing lumber shipments serves no useful purpose for the Customs inspector and that the use of F.B.M., as used in industry, or M.B.F.t, as used in the Tariff Schedules of the United States, is more meaningful. In view of the foregoing, it will not be necessary for shipments made by your firm to be manifested in such a manner as to show the gross weight of the shipment.

With respect to your request for information on implementation of the IMCO General Declaration, we hope to complete Customs' aspect of the project in 1976.

Sincerely yours,

(Signed)

B. James Fritz
Acting Chief
Carrier Rulings Branch

[redacted]

Dear [redacted]

Reference is made to your letter of February 3, 1975, requesting information concerning section 4.12, Customs Regulations. You cite a Headquarters decision of December 17, 1973, denying relief from penalties of $506.66 assessed against the master of the [redacted].

Section 4.12, Customs Regulations, has been the subject of a great deal of review in recent years. As you know, it was amended on January 19, 1971, by Treasury Decision 71-22. Proposals to further amend the section were published in the Federal Register on January 29, 1974 (39 F.R. 3682), relating to the extension of the time period for explaining a manifest discrepancy from 30 to 60 days, and on June 9, 1975 (40 F.R. 24527), relating to the definition of the term "clerical error or other mistake". It is hoped that in the near future section 4.12 as revised in part on the basis of comments received from private industry will be a much more satisfactory regulation for industry and for customs officers.

The particular case you mention involved two penalties. There was a failure to manifest certain merchandise which resulted in a penalty equal to the value of the merchandise under title 19, United States Code, section 1584. There was also a failure to timely correct the aforesaid failure to manifest which resulted in a $500 penalty under title 19, United States Code, section 1440.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E3

Section 4.12, Customs Regulations, in part provides a procedure whereby manifest discrepancies can be explained so that a determination can be made as to whether or not the discrepancy resulted from "clerical error or other mistake" as that term is used in section 1584. If the discrepancy explanation is timely and satisfies the district director and if there has been no loss of revenue penalties are not assessed under section 1584. If these conditions are not met and the penalty is assessed, relief can only be granted by action on a petition filed under title 19, United States Code, section 1618.

Vessel masters or agents are required to notify the district director of manifest discrepancies within a certain period of time. Failure to do so in the case of an overage results in a penalty of $500 under section 1440. Such a penalty will be assessed when incurred regardless of any later explanation of the overage and relief from the section 1440 penalty can only be granted by action on a petition filed under section 1618.

With regard to the section 1440 penalty in the [redacted] case, the overage was not reported by the master or agent within the prescribed time period and therefore a $500 penalty was assessed under section 1440. The petition stated that the merchandise which caused the overage was the property of a representative of the builder of the vessel who was aboard to inspect it on its maiden voyage, that the representative was not responsible to the master, that the representative declared the merchandise to Customs on CF 7523, and that the goods were found to be valued under $10 and free of duty. The petition further states that representatives of the vessel were not aware of the overage until receipt of the penalty notice dated June 28, 1973. However, the explanation relating to the violation of section 1440 was not considered sufficient by Headquarters to warrant relief under section 1618 and the petitioner was informed by the district director on August 27, 1973, that the petition had been denied by Headquarters and was

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E4

108540

informed by the district director on January 3, 1974, that a supplemental petition had been denied. Further information on the reason for the denials of relief from the section 1440 penalty would have to be obtained from Donald W. Lewis, Esq., Chief, Penalties Branch, Headquarters.

With regard to the section 1584 penalty in the [redacted] case, the district director was not satisfied that the overage resulted from a clerical error or other mistake and therefore a penalty equal to the value of the merchandise was assessed under section 1584. The petition stated that the overage resulted from the fact that the merchandise belonged to a representative of the builder as mentioned above. While the petition went on at length as to why an explanation of the overage on CF 5931, presented on July 16, 1973, should have been "accepted", the fact is that whether or not the explanation was accepted as "timely" would not resolve the penalty assessed under section 1584. Relief could only be granted from that penalty if satisfactory evidence of mitigating circumstances warranting relief had been presented in a petition. However, the explanation relating to the violation of section 1584 was not considered sufficient by Headquarters to warrant relief under section 1618. Further information on the reasons for the denial of relief would have to be obtained from Mr. Lewis.

We would appreciate your views and comments on section 4.12 as it has been amended and as it is proposed to be amended. We assure you that we will do whatever we can within our statutory responsibilities to protect the revenue and prevent smuggling to provide satisfactory requirements in our regulations so that international trade will be facilitated to the maximum extent possible. We believe the pending bill to amend or repeal some sixty very old and detailed navigation laws, which we have discussed in the past, is a step in that direction. The bill would repeal section 1440 and substantially amend section 1584 and would provide necessary statutory

[redacted]

Dear [redacted]

This is in response to your letter of December 20, 1976, addressed to the Port Director, Hidalgo, Texas, concerning the inward manifest requirements applicable to trucks arriving at Hidalgo from Mexico. You forwarded a copy of your letter to the Commissioner of Customs.

On January 12, 1977, this office requested a report on the matter from the Port Director, Hidalgo, Texas. The Port Director made his report on the matter to the Regional Commissioner, Houston, who in turn reported on the matter to this office.

The Regional Commissioner states that since the date on which your letter was written, a meeting between the Association and Customs management officials has produced desired results without any delay of merchandise and without generating the amount of paper work your letter infers. Also, a meeting was held January 4, 1977, between the Port Director at Hidalgo and yourself which cleared many of the fears expressed in your letter of December 20, 1976. Since that time manifest requirements have been enforced, and all vehicles are arriving with a proper manifest and no further difficulties with manifesting requirements are anticipated.

Inasmuch as any number of vehicles may be cleared on a single entry, the only additional paper work required is the preparation of an inward foreign manifest for each vehicle, as required by the Customs Regulations. We believe that compliance with the regulations will enable Customs to give better service in clearing trucks arriving at Hidalgo from Mexico. [redacted]

Sincerely yours,

LTC James N. McCune, JAGC
Department of the Army
Headquarters,
Military Traffic Management Command
Washington, D.C. 20315

Dear Colonel McCune:

This is with reference to your letter in which you request a ruling that the Transceived Manifest (a copy of which you enclosed with your letter) is in full compliance with Customs requirements and will be accepted by Customs officers upon entry of vessels operated on the behalf of the Military Sealift Command.

The requirements for an inward foreign manifest (now referred to as a Cargo Declaration, Customs Form 1302, copy enclosed) are prescribed by sections 431 and 432, Tariff Act of 1930, as amended (19 U.S.C. 1431, 1432), and the provisions of the Convention on Facilitation of International Maritime Traffic, ratified by the United States on March 17, 1967 (18 U.S.T. 411, TIAS 6251). The form of the Cargo Declaration was developed by the Intergovernmental Maritime Consultative Organization (IMCO), as modified by the International Chamber of Shipping (ICS). The adoption of this and other maritime forms is part of an international program to simplify paperwork in international commerce through the use of standardized forms.

The statutes and Convention referred to above require the Cargo Declaration to contain certain specific information. The information required and our comments as to the adequacy of the Transceived Manifest (TM) in complying with the requirements are as follows:

a. Name of ship
This is set forth on the TM.

b. Nationality of ship
Although this is not specifically set forth on the TM, it could be assumed the vessel is of United States nationality.

c. Name of master
This is not on the T.M.

d. Port of lading
This is on the TM (in code).

E8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

e. Port of discharge
This is on the TM (in code).

f. Mark and numbers
These are not on the TM.

g. Container numbers (where applicable)
Apparently there is no provision for container numbers. If the cargo is not containerized, the lack of provision is of no consequence.

h. Container seal numbers (where applicable)
See our comments on g.

i. Number and kind of packages
This apparently is on the TM (in code).

j. Description of goods
Although this on the TM, the goods are not described with sufficient clarity to meet Customs requirements.

k. Gross weight or Measurement
The weight is on the TM.
There appears to be no provision for measurement.

n. Bill of lading number
This is not on the TM.

o. Date of sailing from port of lading
This is on the TM (in code).

From the foregoing, it is apparent that with a few exceptions, the Transceived Manifest is not in compliance with the Customs requirements. Although we appreciate that this manifest contains all the information required by the MSC, Customs officers would find this to be of practically no value as a working document. Should you wish to discuss this matter further with the view of developing a manifest in conformance with Customs requirements, we shall be glad to meet with you. The member of my staff who is concerned with this matter is John Mathis, whose telephone number is 566-5706.

Sincerely,

B. P. Kirk, acting

George C. Steuart
Acting Director

OCT 7 1982

VES-3-21-CO:R:CD:C
105802 PH

This ruling concerns the dutiability of, and the applicability of the coastwise laws to, foreign-built vessels to be used as stationary coal storage facilities at a United States port.

ISSUE:

1. Are foreign-built vessels brought into the United States for use as coal storage facilities subject to duty under the Tariff Schedules of the United States?

2. Do foreign-built vessels used as stationary coal storage facilities in United States territorial waters violate the coastwise laws?

FACTS:

The inquirer represents a company which is considering acquiring several foreign-built vessels for use in the United States. The vessels, now operating under a foreign flag, would enter the United States at a port of entry not yet known and would be berthed permanently alongside a public utility facility where they would be used to store coal. The inquirer requests a ruling that (1) the vessels would not be subject to duty upon entering a United States port, and (2) use of the vessels as stationary coal storage facilities would not be in violation of 46 U.S.C. 883.

105802

LAW AND ANALYSIS:

Pursuant to General Headnote 5(e), Tariff Schedules of the United States (TSUS) (19 U.S.C. 1202), "vessels which are not 'yachts or pleasure boats' within the purview of subpart D, part 6, of schedule 6, [TSUS] ..." are not subject to the Tariff Schedules. "Vessels are defined in section 401(a), Tariff Act of 1930 (19 U.S.C. 1401(a)), as including "... every description of water craft or other contrivance used, or capable of being used, as a means of transportation in water ..." but not including aircraft. Accordingly, vessels, whether commissioned or not, brought into the United States for use as coal storage facilities, and not as yachts or pleasure boats, are not subject to duty under the Tariff Schedules.

Title 46, United States Code, section 883, provides, in part, that no merchandise shall be transported between points in the United States embraced within the coastwise laws in any vessel other than a vessel built in and documented under the laws of

E10

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

the United States and owned by persons who are citizens of the United States. The Customs Services has held that this prohibition includes the transportation of merchandise in a non-coastwise-qualified vessel betwen points in a harbor.

The Customs Service consistently has held that the use of a foreign-flag vessel as a storage facility in United States territorial waters does not violate the coastwise laws, or any other laws administered by the Customs Service, provided that the vessel remains stationary. Customs also has held that if the vessel is being loaded or unloaded and must be moved to another location because of stress of weather or other reason involving the vessel's safety, subsequently is returned to the same point to continue its loading or unloading, and loads or unloads no merchandise at any other point in the United States, the coastwise laws are not violated.

Upon its arrival in the United States, the vessel would be required to make a report of arrival (19 CFR 4.2) and entry (19 CFR 4.3) and would be subject to the payment of tonnage taxes (19 CFR 4.20, et seq.).

HOLDINGS:

1. Foreign-built vessels brought into the United States for use as coal storage facilities, and not as yachts or pleasure boats, are not subject to duty under the Tariff Schedules.

2. Foreign-built vessels used as coal storage facilities in United States territorial waters do not violate the coastwise laws, provided that the vessels remain stationary.

EFFECT ON OTHER RULINGS:

None.

(Signed) Edward B. Gable, Jr.

Edward B. Gable, Jr.

DEPARTMENT OF THE TREASURY

U.S. CUSTOMS SERVICE

WASHINGTON

AUG 30 1983

REFER TO

VES-13-18-CO:R:CD:C
106239 LLB

This ruling concerns certain vessel repair duties assessed pursuant to title 19, United States code, section 1466.

ISSUE:

Whether repairs made in compliance with government requirements qualify for remission under section 1466?

FACTS:

In April of 1980, the owner of this LASH barge made application for remission of duties, stating that the repairs were casualty related and were made in order to maintain the safety and seaworthiness of the barge. This application was denied on August 18, 1981.

A petition for remission was filed on September 21, 1981, in which it is claimed that the repairs were necessitated by government requirements.

LAW AND ANALYSIS:

Title 19, United States Code, section 1466, provides in pertinent part for payment of an ad valorem duty of 50 percent on the cost of foreign repairs to a vessel documented under the laws of the United States to engage in the foreign or coastwise trade. Section 1466(d)(1) provides that the Secretary of the Treasury is authorized to remit or refund such duties if the owner or master of the vessel provides good and sufficient evidence that the vessel was compelled by stress of weather or other casualty to put into such foreign port to make repairs to secure the safety and seaworthiness of the vessel to enable her to reach her port of destination.

The language of the statute is clear and specific in requiring "good and sufficient evidence" of casualty. We have previously ruled that mere bald statements, unsupported by evidence, are insufficient to support grants of remission. (Ruling letter 105812, October 27, 1982). The file contains absolutely no evidence of casualty.

Furthermore, we have previously ruled (Ruling Letter No. 105668, June 25, 1982), that repairs necessitated by agencies of the government do not qualify as casualty occurrences for which remission or refund may be permitted.

E12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

HOLDING:

In light of the foregoing facts and analysis, the petition is denied.

JUL 29 1983

REFER TO
VES-8-01-CO:R:CD:C
106282 JM

[redacted]

Dear [redacted]

This is in reply to your letter dated July 1, 1983, concerning your proposal to use a privately printed form in lieu of the Cargo Declaration, Customs Form 1302. Your letter of April 27, 1983, and our reply of May 25, 1983, also concerned this proposal.

We note that your proposed form has been amended to show the Customs form number and the Office of Budget approval number. In addition, columns 6 and 7 appear as separate columns in agreemnet with the official form. These amendments correct deficiencies in your proposed form which were noted in our letter of May 25, 1983.

It appears that the word "ship" has been inadvertently omitted from block No. 3 which reads "nationality of ship" on the official form. Since block No. 3 was correctly shown on the proposed form forwarded with your letter of April 27, 1983, this correction should pose no problems.

Section 4.7a(c)(1), Customs Regulations (19 CFR 4.7a(c)(1)) provides in part that the measurement in column 9 be shown according to the unit of measure specified in the Tariff Schedules of the United States (TSUS). Accordingly, column No. 9 of the proposed form should be corrected to read "measurement (per TSUS)" as shown on the official form rather than "measurement (CBM)".

As provided by section 4.99 of the Customs Regulations, your revised privately printed form is approved for use in lieu of Customs Form 1302 on condition that block No. 3 and column No. 9 are amended to conform to the official form as stated above.

Sincerely,

Edward B. Gable, Jr.

MAY 6 - 1985

VES-3-02-CO:R:CD:C
107573 JM

Herbert B. Halberg, Esq.
Beck, Halberg & Williamson
40 Exchange Place
New York, New York 10005

Dear Mr. Halberg:

This is in response to your letter dated April 9, 1985, concerning the use of a foreign-built vessel as a pilot boat. The United New York and United New Jersey Sandy Hook Pilot Associations are contemplating the construction in Europe of a vessel for use as a pilot boat at the entrance to New York Harbor.

You state that the Sandy Hook Pilots do not intend to transport either cargo or passengers with their new vessel. You also state that the vessel will be used only as a station boat and for the transportation of pilots. You ask whether the vessel will be subject to penalties if the vessel is used solely as stated above. You also ask whether the vessel will be subject to duty when she enters the United States.

Title 46 United States Code, section 289, provides that no foreign vessel shall transport passengers between ports or places in the United States either directly of by way of a foreign port, and provides a penalty of $200 for each passenger so transported and landed. Title 46, United States Code, section 12106(b), provides in part that only a vessel for which a coastwise license or an appropriately endorsed registry has been issued may engage in the coastwise trade. Since transportation of passengers between points in the United States is coastwise trade, only a vessel documented for the coastwise trade may engage in such transportation.

Section 4.50(b), Customs Regulations (19 CFR 4.50(b)), defines a passenger as any person carried on board a vessel who is not connected with the operation of such vessel, her navigation, ownership, or business.

In view of the fact that the pilots in the subject case own the transporting vessel, they do not come within the meaning of passengers as defined by section 4.50(b), Customs Regulations. Accordingly, transportation of the pilots in the United States on a non-coastwise-qualified vessel does not constitute a violation of the coastwise laws.

F1

10 76-73

MAY BE RELEASED TO THE PUBLIC _____

In a telephone conversation of May 2, 1985, you informed Mr. John Mathis of my staff that use of the vessel as a "station boat" means that the vessel will remain at a station with pilots living aboard while awaiting vessels arriving in the New York Harbor. Such use of subject vessel will not constitute a violation of the coastwise laws.

With respect to the dutiable status of the subject vessel, General Headnote 1, Tariff Schedules of the United States, provides in general that all articles imported into the Customs territory of the United States are subject to duty. General Headnote 5 of the Tariff Schedules provides that:

> For the purposes of headnote 1 - *** (g) vessels which are not "yachts or pleasure boats" within the purview of subpart D, part 6, of schedule 6, are not articles subject to the provisions of these schedules.

A pilot vessel is not a yacht or pleasure boat within the purview of subpart D and would therefore not be treated as an article subject to duty.

In a telephone conversation with Mr. Mathis on April 26, 1985, you requested that Customs answer the questions within the jurisdiction of Customs as soon as possible and disregard your question concerning documentation of the vessel, a matter within the jurisdiction of the U.S. Coast Guard. Under the circumstances, we have not referred your inquiry to the Coast Guard.

Sincerely,

(Signed) Kathryn C. Peterson

John E. McDermott, Esq.,
and Edwin S. Matthews, Jr., Esq.
Coudert Brothers
200 Park Avenue
New York, New York 10166

Dear Messrs. McDermott and Matthews:

In your letter of May 22, 1985, on behalf of Ham-U.S.A. Inc., you request a ruling on the use of a foreign-built cutter suction-type dredge in dredging operations in the Beaufort Sea off the North Coast of Alaska. You state that the dredge would be used to dredge trenches in the seabed for the placement of oil pipelines. To prevent back-flow of the dredged material into the trenches, it would be disposed of through a floating pipeline or transported by barge and dumped at an offshore site. It is likely that the dredged material would be without value but it is also possible that the dredged material would deposited for the purpose of creating an artificial island. The dredge itself would not store or transport dredged material. The dredging operation would, for the most part, take place outside United States territorial waters on the outer continental shelf (OCS) but, "such dredging may also involve operations which are within U.S. territorial waters."

You seek a ruling that:

1. The foreign-built dredge under consideration may engage in dredging outside the territorial waters of the United States because the Jones Act (46 U.S.C. 883) and the dredging statute (46 U.S.C. 292) do not apply outside United States territorial waters;

2. The proposed dredging by the dredge under consideration does not constitute "transportation" or "merchandise" under 46 U.S.C. 883; and

3. The foreign-built dredge under consideration may engage in dredging in United States territorial waters if it is "documented as a vessel of the United States" without violating 46 U.S.C. 292.

The questions you raise are discussed at length in two of our recent rulings (see C.S.D. 85-11 and ruling VES-10-02-CO:R:CD:C 106913 PH, September 17, 1984, copies enclosed).

F3

107680

MAY BE RELEASED TO THE PUBLIC

Under these rulings, the dredge under consideration, as a foreign-built dredge, may not engage in the proposed dredging on the OCS, assuming that the oil pipelines to be placed in the trenches to be dredged are to be used to carry oil to or from oil platforms or other installations or devices used to explore for, develop, or produce resources from the OCS (C.S.D. 85-11). If the dredging on the OCS outside territorial waters is not related to the exploration for, development, or production of resources from the OCS, it would not be prohibited. For your information, the use of a dredge to engage in dredging in the United States is not considered an engagement in the coastwise trade under 46 U.S.C. 883, when such dredging does not include any transportation by vessel.

If the dredged material is completely without value and is merely dumped, it would not be considered "merchandise," for purposes of 46 U.S.C. 883, and could be transported by a non-coastwise-qualified vessel. If it is used to construct an artificial island it would be considered "merchandise." Its transportation by a non-coastwise-qualified vessel from the dredging site to the site of the artificial island would be prohibited by the coastwise laws, if there was an installation or other device permanently or temporarily attached to the seabed for the purpose of exploring for, developing, or producing resources from the OCS or, if there was no such installation or device at the site, after any part of the incipient artificial island was above the level of mean high water, if the artificial island was to be used for one of the purposes described in the OCSLA. The use of a dredge in effecting the movement of dredged material through a pipeline, and not by movement of the dredge itself, is not considered a transportation of merchandise by the dredge between points in the United States (C.S.D. 85-11 and ruling 106913).

The foreign-built dredge under consideration may not engage in dredging in United States territorial waters even if "documented as a vessel of the United States" (C.S.D. 85-11).

With regard to the contention in your letter that Customs has limited the geographical scope of 46 U.S.C. 883 to the transportation of merchandise between two points within the territorial waters of the United States, your attention is directed to Treasury Decision 54281 (1957), copy enclosed. Since that time, we have consistently applied the coastwise laws to the transportation of merchandise between "installations and other devices" subject to United States law by virtue of the Outer Continental Shelf Lands Act of 1933, as amended (OCSLA),

107688

F4

and between such installations and other devices and points actually in the United States or its territorial waters. Congress was aware of our interpretation of the OCSLA with regard to the coastwise laws and, at least implicitly, approved that interpretation in its 1978 Amendments to the OCSLA (see House Report 95-590 and House Conference Report No. 95-1471, reproduced, in pertinent part, at 1978 U.S.C.C.A.N. 1450, 1535, 1722 and 1723). The ruling to which you refer to support this and other contentions in your letter, VES-10-02-RRUCDC 104541 PH, May 28, 1980, has been revoked (see our telegram VES-10-02-RRUCDC 104811 PH, September 1, 1980, copy enclosed).

The foregoing paragraph is also applicable with regard to your contention that 46 U.S.C. 292 is not made applicable to the OCS by the OCSLA. Although Customs had not ruled 46 U.S.C. 292 to be applicable to the OCS at the time of the 1978 Amendments to the OCSLA, we believe that the intent of the OCSLA is met by our ruling in C.S.D. 85-11. As stated in the preceding paragraph, ruling 104541 has been revoked.

Our position on your contention that a foreign-built dredge may engage in dredging in the United States if "documented as a vessel of the United States" is discussed in C.S.D. 85-11. The court case of Great Lakes Dredge and Dock Company v. Ludwig, 486 F. Supp. 1305 (1980), which you cite with regard to this issue, did not involve a foreign-built dredge (see 486 F. Supp. at 1312). The material in that decision which you quote, which considers the question of whether "American-built dredges should be able to engage in dredging in the United States without being licensed and enrolled to engage in the coastwise trade" (486 F. Supp. 1312), is dicta. In reaching our position on the meaning of the phrase "unless documented as a vessel of the United States" we have, as the court in Great Lakes Dredge and Dock Company suggested, "reexamine[ed] the ancient documentation statutes" (486 F. Supp. 1312) (see C.S.D. 85-11).

Sincerely,

(Signed) Kathryn C. Peterson

DEPARTMENT OF THE TREASURY - U S CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

107680

VES-3-06/VES-7-03
VES-12-01 CO:R:CD:C
107991 PH
108007

27 DEC 1985

Jess G. Webster, Esq.
Mikkelborg, Broz, Wells, Fryer & Yates
3300 Seattle First National Bank Building
Seattle, Washington 98154

Dear Mr. Webster:

In your letters of October 3 and 28, 1985, you request a ruling on the applicability of the coastwise laws, documentation laws, Nicholson Act, and Customs duty provisions to the proposed use of a foreign-built, United States-flag fish processing vessel off the coast of Alaska.

You state that it is proposed to form a United States citizen corporation which would purchase a foreign-built vessel. This vessel would be documented as a vessel of the United States and used for the processing of seafood products. The vessel would receive fish from United States catching vessels on the high seas and process the fish into seafood products on board. The vessel would then transship the processed fish within United States territorial waters to another vessel bound for foreign ports.

You request a ruling on whether the vessel would be dutiable on its transfer to United States owners and documentation. You recognize that certain foreign repairs to, and equipments purchased abroad for the vessel after it is documented in the United States would be subject to duty under 19 U.S.C. 1466. You ask about the dutiability of the fish processed by the processing vessel and whether the seafood products could be stored at shore based facilities pending shipment abroad.

You state that you understand that a foreign-built, United States-flag vessel may engage in seafood processing without violating 46 U.S.C. 12106 (we believe you mean 46 U.S.C. 12108) and request confirmation of this understanding. You request that we rule on whether the proposed operation violates the Nicholson Act (46 U.S.C. 251(a)).

107991/108007

F6

TO THE

Finally, you request that we rule on the applicability of the coastwise laws to the proposed operation. You state that you understand that a foreign-built vessel may transship fish products at the same point in territorial waters at which it received them, even if it does move during the time between receipt and transshipment of the fish. You also understand that a foreign-built vessel may receive fish on the high seas and transship them in territorial waters or receive fish in territorial waters and transship them on the high seas, although such a vessel may not receive fish at one point in territorial waters and transship them at another point in territorial waters. You request confirmation of these understandings. You also request confirmation that if the foreign-built processing vessel loads fuel and supplies in territorial waters it may deliver portions of such fuel and supplies to United States catcher vessels outside territorial waters or at the same location at which they were loaded without violating the coastwise laws.

Pursuant to General Headnote 5(g), Tariff Schedules of the United States (19 U.S.C. 1202) (TSUS), vessels which are not "yachts or pleasure boats" within the purview of subpart D, part 6, of schedule 6, TSUS (see items 696.05 and 696.10, TSUS), are not subject to duty under the TSUS. Accordingly, a fish processing vessel would not be subject to duty in the United States on its transfer to United States ownership and documentation.

Products of an American Fishery qualify for duty-free entry under item 180.00, Tariff Schedules of the United States (TSUS), and sections 10.78 and 10.79, Customs Regulations (19 CFR 10.78 and 10.79). An American Fishery is defined, as applicable to the proposed fishing venture under consideration, in these provisions as "a fishery enterprise conducted under the American flag by vessels of the United States on the high seas ...."

In applying these provisions, we have ruled that for fish taken on the high seas to be the product of an American Fishery and free of duty under the TSUS, they must have been caught by a United States-flag vessel. We have ruled that even if the fish are caught by a United States-flag vessel, they could lose their status as the product of an American Fishery if transshipped to a foreign-flag processing vessel for processing.

In this case, fish would be caught by United States catching vessels, transshipped to a United States-flag processing vessel, and, after processing, transshipped to a foreign-flag vessel for transportation abroad. Such fish would qualify for treatment as the product of an American Fishery and would not be subject to

F1

duty in the United States at the time it is transshipped to the United States-flag processing vessel for processing or the foreign-flag vessel for transportation abroad. The storage of the processed fish at shore based facilities in the United States pending their shipment abroad would not affect this determination, nor would it be prohibited by any law administered by the Customs Service, assuming that the processed fish were landed in the United States by the United States-flag processing vessel and that that vessel did not receive the fish in United States territorial waters (see discussion of 46 U.S.C. 251(a) and 883, below).

With certain exceptions not relevant to this case, only a vessel with a fishery license or an appropriately endorsed registry may engage in the fisheries, pursuant to 46 U.S.C. 12108. To obtain such a license or registry, a vessel must be of more than 5 net tons, United States owned, and United States built. "Fisheries" is defined in 46 U.S.C. 12101(6) to include "planting, cultivating, catching, taking, or harvesting fish, shellfish, marine animals, pearls, shells, or marine vegetation in the navigable waters of the United States or in the fishery conservation zone established by [16 U.S.C. 1811]." The fishery conservation zone established by 16 U.S.C. 1811 is the zone between 3 miles and 200 miles from the baseline from which the territorial sea of the United States is measured.

Thus, the fisheries, as defined for purposes of vessel documentation, does not include fish processing. We confirm that the foreign-built fish processing vessel under consideration may engage in fish processing, either in or outside United States territorial waters, without violating 46 U.S.C. 12108.

Under the Nicholson Act (46 U.S.C. 251(a)), no foreign-flag vessel shall land in a port of the United States its catch of fish taken on board the vessel on the high seas or fish products processed therefrom, or any fish products taken on board the vessel on the high seas from a vessel engaged in fishing operations or in the processing of fish or fish products. In this case, the fish processing vessel would be a United States-flag vessel. Thus, it would not violate 46 U.S.C. 251(a) even if it received fish on the high seas and landed them or the products processed therefrom in the United States (e.g., landed them in a port of the United States or transshipped them to another vessel in United States territorial waters).

Under the coastwise merchandise statute (46 U.S.C. 883), no merchandise shall be transported between points in the United States embraced within the coastwise laws, either directly or via a foreign port, or for any part of the transportation, in any vessel other than a vessel built in and documented under the laws

107991 / 108007

F8

of the United States and owned by citizens of the United States. A point in United States territorial waters is considered a point embraced within the coastwise laws of the United States, for purposes of this provision. The territorial waters of the United States consist of the territorial sea, defined as the belt, 3 nautical miles wide, adjacent to the coast of the United States and seaward of the territorial sea baseline.

The fish processing vessel under consideration, as a foreign-built vessel, may not engage in the coastwise trade. As you suggest, the vessel could not receive fish at one coastwise point (e.g., a point in United States territorial waters) and off-load the fish or products processed therefrom at another coastwise point (e.g., a point on shore in the United States or a second point in United States territorial waters). The processing vessel could receive fish outside United States territorial waters and off-load or transship the fish or products processed therefrom at a coastwise point and it could receive the fish inside United States territorial waters if the location at which it off-loaded or transshipped the fish or products processed therefrom was outside United States territorial waters. The processing vessel also could receive fish in territorial waters and transship the fish or products processed therefrom at the same point in territorial waters at which it received the fish, even if it moved between the time of receipt and transshipment of the fish.

The same principles apply with regard to the transportation by the processing vessel of fuel and supplies for United States catcher vessels. The coastwise laws would not be violated by such transportation if the point at which the processing vessel loaded the fuel and supplies was a coastwise point and the point at which it transshipped them to the catcher vessels was outside United States territorial waters or, if inside United States territorial waters, the same point at which it loaded the fuel and supplies.

We note that it is intended that the fish processed on board the United States-flag processing vessel are to be transshipped in United States territorial waters to another vessel for transportation to foreign ports. As you indicate you are aware, the definition of fishing in the Magnuson Fishery Conservation and Management Act (16 U.S.C. 1801, et seq.), differs substantially from that of the fisheries in 46 U.S.C. 12101(6), quoted above, and includes the processing and transportation of fish (see 16 U.S.C. 1802(10). The National Marine Fisheries Service (NMFS) in the National Oceanic and Atmospheric Administration (NOAA) administers the Magnuson Act. We understand that, under 16 U.S.C. 1824, a foreign-flag vessel may not, unless it has a valid permit issued under that statute, receive fish or fish products in the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

10799/10807

fishery conservation zone and transport those fish or fish products and that, under 16 U.S.C. 1857(2)(A), a foreign-flag vessel may not receive fish or fish products in United States territorial waters and transport those fish or fish products.

If you wish to write to NOAA about this matter, the mailing address for inquiries on this subject is:

8 - MAY 1986

VES-5-19-COR:CD:C
108324 DHR

[redacted]

Dear [redacted]

This is with reference to your letter dated April 2, 1986, concerning Baltimore District Case 84-1303-51289 in which a penalty of $500 was assessed under 46 U.S.C 1445 for violation of 19 U.S.C. 1444. Apparently, an automobile which was manifested for Newark, New Jersey, was overcarried and unladed from the [redacted] in Baltimore. Code 12 on the Discrepancy Report and Declaration (CF 5931) was filed by the vessel. The automobile was not returned to Newark, its manifested port of destination, in acorddance with section 4.34(b) of the Customs Regulations for overcarried cargo. It was therefore considered to be diverted.

You take issue with the assessment of the penalty because the vessel did in fact arrive in Baltimore with a manifest, albeit one with a discrepancy, which was corrected by the filing of the Post Entry.

Although it is true that the [redacted] arrived in Baltimore with a manifest, it arrived without a Baltimore destination manifest for the automobile in question and was therefore deemed not to have had a permit to proceed with the automobile to that port. The filing of a Post Entry for overages is required by 19 U.S.C. 1440, and is not addressed to the correction of the manifest.

In view of the foregoing, the action of the District Director at Baltimore is affirmed.

Sincerely,

Kathryn C. Peterson

14 MAY 1986

Mr. John J. Bajor
President/Director
Keppel Marine Agencies, Inc.
26 Broadway
New York, New York 10004

Dear Mr. Bajor:

With your letter of May 9, 1986, you sent a copy of your telex of the same date concerning the use of foreign-built sludge barges by the city of New York to transport sludge to a point "some 106 miles off the coast." You request confirmation of the advice by Mr. Donald H. Reusch of my staff that the proposed transportation will not violate the Jones Act.

Title 46, United States Code, section 883 (46 U.S.C. 883) (often called the "Jones Act"), provides, in part, that no merchandise shall be transported between points in the United States embraced within the coastwise laws, either directly or via a foreign port, or for any part of the transportation, in any vessel other than a vessel built in and documented under the laws of the United States and owned by persons who are citizens of the United States.

For purposes of section 883, a point in United States territorial waters is considered a point embraced within the coastwise laws. The territorial waters of the United States consist of the territorial sea, defined as the belt, 3 nautical miles wide, adjacent to the coast of the United States and seaward of the territorial sea baseline.

We have ruled that material, such as sludge or refuse, which has no apparent value and will not be used commercially or in trade but is being dumped as worthless is not considered "merchandise," for purposes of section 883. Such material could be transported between coastwise points by a non-coastwise-qualified vessel.

In this case, non-coastwise-qualified barges would transport sludge to the high sea where it would be dumped. The material transported would not be considered "merchandise," for purposes of

108368

F13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

section 883, and, in any event, the transportation would not be between coastwise points. Section 883 would not prohibit the proposed transportation of the sludge from a point in the United States to the dumping site approximately 106 miles offshore.

Sincerely,

(Signed) Kathryn C. Peterson

Kathryn C. Peterson

TO : District Director of Customs
Savannah, Georgia

FROM : Chief, Carrier Rulings Branch

SUBJECT: Applicability of Coastwise Laws to Vessel Transportation of Pilot Observer or Trainee

In your memorandum of September 2, 1986 (File: INS-1 DD:LCD), you request our advice on the applicability of the coastwise laws to the transportation of an employee of Atlantic Towing Company, Mr. John C. McCarthy, III, who is attempting to obtain a United States Coast Guard first class pilot's license for the port of Savannah. With your memorandum you forwarded copies of background material pertaining to this matter, including a letter from Mr. McCarthy, a letter from the Coast Guard to Alantic Towing Company, Savannah Marine Safety Circular 2-86 setting forth the service requirements for a pilot's license, and a letter from the Savannah Pilot's Association to Ivaran Agencies, Inc., the owner of or agent for the vessels on which Mr. McCarthy was transported.

You state that because one of the Coast Guard requirements for obtaining a pilot's license is that the candidate make a number of trips as an observer over the route for which the license would be granted, Atlantic Towing and Mr. McCarthy had obtained permission for him to ride and observe on Ivaran vessels. Mr. McCarthy has made several such voyages but the Savannah Pilot's Association has refused to allow Mr. McCarthy to ride their pilot boat to and from the sea buoy where pilots board or leave vessels for piloting in and out of the Savannah River. As a result, Mr. McCarthy has been forced to proceed with the vessel to its next port of call or to join the vessel at the port of call before Savannah, either Charleston, South Carolina, or Jacksonville, Florida.

The Savannah Pilot's Association has written to Ivaran contending that its transportation of Mr. McCarthy, described above, is in violation of the coastwise laws. The Pilot's Association has provided a copy of this letter to you with a verbal request that Customs not allow Mr. McCarthy to ride on the vessels.

108589

G1

You state that it is your opinion, as well as that of Customs in Charleston, that there is no violation of the coastwise laws when Mr. McCarthy rides the vessels for the purpose of obtaining the required Coast Guard experience. You request a ruling on the matter as soon as possible.

Title 46, United States Code, section 289, as interpreted by the Customs Service, prohibits the transportation of passengers between points embraced within the coastwise laws, either directly or by way of a foreign port, in any vessel other than a vessel built in, documented under the laws of, and owned by citizens of the United States. For purposes of this provision, "passenger" is defined as "... any person carried on a vessel who is not connected with the operation of such vessel, her navigation, ownership, or business" (19 CFR 4.50(b)).

In our interpretation of the coastwise laws, we have held that a person transported on a vessel as a student in courses such as oceanography or sailing and seamanship, when the presence of that person is required on board the vessel as a part of his or her course or training, is not a passenger, for purposes of the coastwise laws. Analagously, we believe that Mr. McCarthy, when transported on a vessel over the route for which he is a pilot candidate for the purpose of observing so that he may obtain his pilot's license, is not a passenger, for purposes of the coastwise laws. We note that we have consistently held that a pilot transported on a vessel for the purpose of piloting the vessel, or transported to the vessel to be piloted by another vessel, is not a passenger, for purposes of the coastwise laws.

We concur with your opinion and the opinion of Customs in Charleston that Mr. McCarthy is not a passenger, for purposes of the coastwise laws, in the situation described in your memorandum and above.

(Signed) Kathryn C. Peterson

Kathryn C. Peterson

PUBLIC

G2

7- OCT 1986

VES-3-CO:R:CD:C
108605 PH

John R. McKay, Esq.
Kurrus & Kirchner
1055 Thomas Jefferson Street, NW.
Washington, D.C. 20007

Dear Mr. McKay:

In your letter of September 15, 1986, you request a written ruling on the applicability of the coastwise laws to a number of vessel voyages originating, terminating, or touching at the United States Virgin Islands ("Virgin Islands").

Title 46, United States Code, section 883 (46 U.S.C. 883), often called the Jones Act), in part, prohibits the transportation of merchandise by water or by land and water between points in the United States embraced within the coastwise laws, either directly or via a foreign port, or for any part of the transportation, in any vessel other than a vessel built in and documented under the laws of the United States and owned by citizens of the United States. Title 46, United States Code, section 877, provides that "the coastwise laws of the United States shall not extend to the Virgin Islands of the United States until the President of the United States shall, by proclamation, declare that such coastwise laws shall extend to the Virgin Islands and fix a date for the going into effect of same." Because no such proclamation has been issued by the President, non-coastwise-qualified vessels are not prohibited from engaging in the coastwise trade in the Virgin Islands and the waters thereof.

108605

On the basis of the foregoing, we will rule on the applicability of the coastwise laws to the voyages you describe in the order presented.

A. A voyage from a United States port to the Virgin Islands in ballast would not be considered coastwise trade because no merchandise is transported and the coastwise laws do not apply to the Virgin Islands.

B. A voyage from the Virgin Islands to a United States port in ballast would not be considered coastwise trade because no merchandise is transported and the coastwise laws do not apply to the Virgin Islands.

C. A voyage from a United States port to the Virgin Islands with cargo to be discharged in the Virgin Islands would not be considered coastwise trade because the Virgin Islands are not

G3

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

embraced within the coastwise laws of the United States (i.e., such a voyage would be between a coastwise point and a non-coastwise point).

D. A voyage from the Virgin Islands to a United States port with cargo originating in the United States and previously transported to the Virgin Islands would be considered coastwise trade unless the cargo was being returned to the exact same point in the United States from which it was transported to the Virgin Islands or unless the cargo was manufactured or processed into a new and different product in the Virgin Islands (see 19 CFR 4.80b and American Maritime Association v. Blumenthal, 590 F. 2d 1156 (1978), cert. den. 441 U.S. 943). If the cargo was not being returned to the point of origin in the United States or being manufactured or processed into a new and different product in the Virgin Islands, the voyage from a United States port to the Virgin Islands, if by vessel, as well as the voyage from the Virgin Islands to a United States port, would be considered coastwise trade.

E. A voyage from the Virgin Islands to a United States port with cargo of foreign or Virgin Islands origin would not be considered coastwise trade, assuming that the foreign or Virgin Islands-origin cargo had not been transported, directly or indirectly, from a port in the United States.

F. A voyage from a United States port to another United States port, including a stop at the Virgin Islands at which the cargo is not discharged, would be considered coastwise trade, assuming that the cargo was loaded on the vessel at the first United States port and unloaded at the second United States port.

G. A voyage from the Virgin Islands to a United States port with United States crude oil that has been stored, without any refining or transformation, in the Virgin Islands would be considered coastwise trade, assuming the crude oil was not being returned to the exact same United States port from which it was transported to the Virgin Islands. If the cargo was not being returned to the point of origin in the United States, the voyage from a United States port to the Virgin Islands, if by vessel, would also be considered coastwise trade.

H. A voyage from the Virgin Islands to a United States port with a refined product derived from United States origin crude oil that was transported to the Virgin Islands for refining there would not be considered coastwise trade if the refining of the crude oil in the Virgin Islands actually consisted of manufacturing or processing which resulted in a new and different product (see D, above). Generally, we have ruled that the refining of crude oil into petroleum products is a manufacturing or processing into a new and different product.

108605

G4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

I. A voyage from the Virgin Islands to a United States port with foreign origin crude oil that has been stored, without any refining or transformation in the Virgin Islands, would not be considered coastwise trade, assuming that the foreign origin crude oil had not been transported, directly or indirectly, from a port in the United States.

J. A voyage from the Virgin Islands to a United States port with refined product derived from foreign crude oil that was transported to the Virgin Islands would not be considered coastwise trade, assuming that the foreign origin crude oil had not been transported, directly or indirectly, from a port in the United States. Even if the foreign origin crude oil had been so transported, if it was refined in the Virgin Islands to the extent that the refining operation was considered to be a manufacturing or processing into a new and different product, the voyage would still not be considered coastwise trade.

You should be aware that the Virgin Islands have their own Customs laws (see 48 U.S.C. 1406i and section 101.1(1), Customs Regulations (19 CFR 101.1(1)). You may wish to check with the appropriate authorities in the Virgin Islands to ensure that the voyages you describe are in compliance with the Customs laws of the Virgin Islands.

Sincerely,

(Signed) Kathryn C. Peterson

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

GS

3- OCT 1986

VES-3-CO:R:CD:C
108606 PH

John R. McKay, Esq.
Kurrus & Kirchner
1055 Thomas Jefferson Street, NW.
Washington, D.C. 20007

Dear Mr. McKay:

In your letter of September 15, 1986, you request a ruling on the applicability of the coastwise laws to a number of voyages. You state that each voyage concerns a United States-flag vessel. The voyages are described as--

> A. From a United States port to the west coast of Panama and the western terminus of the trans-Panama pipeline with United States origin crude oil.
>
> B. From the east coast of Panama and the eastern terminus of the trans-Panama pipeline to the Virgin Islands with United States origin crude oil that has passed through the pipeline.
>
> C. From Alaska to a point off the west coast of Panama, where the cargo of United States origin crude oil is discharged onto a smaller vessel for a lightering operation or for passage through the Panama Canal.
>
> D. From the point of transfer envisioned in "C," above, through the Panama Canal and to a United States gulf or east coast port.

Title 46, United States Code, section 883 (46 U.S.C. 883, often called the Jones Act), in part, prohibits the transportation of merchandise by water or by land and water between points in the United States embraced within the coastwise laws, either directly or via a foreign port, or for any part of the transportation, in any vessel other than a vessel built in and documented under the laws of the United States. Title 46, United States Code, section 877, provides that "the coastwise laws of the United States shall not extend to the Virgin Islands of the United States until the President of the United States shall, by proclamation, declare that such coastwise laws shall extend to the Virgin Islands and

108606

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G6

fix a date for going into effect of same." Because no such proclamation has been issued by the President, non-coastwise-qualified vessels are not prohibited from engaging in the coastwise trade in the Virgin Islands and the waters thereof.

Merchandise which is transported by vessel or other means from a United States coastwise point to a non-coastwise point where it is manufactured or processed into a new and different product and then transported by vessel or other means, in the form of the new and different product, to another coastwise point is not considered to be transported in the coastwise trade. With regard to this interpretation of the coastwise laws, your attention is invited to section 4.80b, Customs Regulations (19 CFR 4.80b), and American Maritime Association v. Blumenthal, 590 F. 2d 1156 (1978), cert. den. 441 U.S. 943. It should be noted that the manufacturing or processing of merchandise must be done on land at the intermediate coastwise point (i.e., the merchandise must be unloaded from the vessel, if transported by vessel) to have this interpretation of the coastwise laws be applicable.

We will rule on the applicability of the coastwise laws to the voyages you describe in the order presented.

A. The applicability of the coastwise laws to this voyage depends on the destination of the crude oil after it passes through the trans-Panama pipeline. Transportation between a United States port and the west coast of Panama, by itself, would not, of course, be considered coastwise trade. If the crude oil is transported from the west coast of Panama by any means (e.g., through the pipeline and on another vessel) to another United States coastwise point without the crude oil being manufactured or processed into a new and different product at an intermediate non-coastwise point, both the pre-Panama and post-Panama transportation, if by vessel, would be considered coastwise trade. If the crude oil is not transported from Panama to a United States coastwise point, or, if transported to such a point, it is manufactured or processed into a new and different product at an intermediate non-coastwise point, the transportation of the crude oil from the United States port to the west coast of Panama would not be considered coastwise trade.

B. The applicability of the coastwise laws to this voyage depends on the destination of the crude oil if it is transported onward from the Virgin Islands and what is done to the crude oil in the Virgin Islands if it is transported onward. Transportation of the crude oil from a United States point to Panama, then through the trans-Panama pipeline, and then to the Virgin Islands, by itself, would not be considered coastwise trade because the coastwise laws do not apply to the Virgin Islands. If the crude oil is

109801

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G1

transported from the Virgin Islands to a point in the United States other than its point of origin (i.e., where it was originally loaded on the vessel for transportation to the trans-Panama pipeline), all vessel portions of the transportation would be considered coastwise trade. If the crude oil is consumed in the Virgin Islands or not transported from the Virgin Islands to a United States coastwise point, the transportation of the crude oil from its point of origin in the United States to Panama and from Pamana to the Virgin Islands, would not be considered coastwise trade. If the crude oil is manufactured or processed into a new and different product in the Virgin Islands and then transported to a United States port or anywhere else, no portion of the transportation of the crude oil and the new and different product would be considered coastwise trade.

C. See A, above. The applicability of the coastwise laws to this voyage depends on what is done with the crude oil after discharge from the vessel which transported the crude oil from Alaska to the point off Panama. If the crude oil is transported onward to a United States port, without being manufactured and processed into a new and different product at an intermediate non-coastwise point, all vessel transportation of the crude oil would be considered coastwise trade. If the crude oil is not transported onward to a United States coastwise point or, if transported to such a point, it is manufactured or processed into a new and different product at an intermediate non-coastwise point, the transportation of the crude oil would not be considered coastwise trade.

D. See C, above. Of course, both portions of this voyage between Alaska and a United States gulf or east coast port, via a point of transfer off the west coast of Panama, would be considered coastwise trade.

Sincerely,

(Signed) Kathryn C. Peterson

Aircraft - Customs Regulations Amended

Sections 6.6, 6.7, and 6.9 of the Customs Regulations, relating to documents for entry of aircraft, amended.

TREASURY DEPARTMENT
OFFICE OF THE COMMISSIONER OF CUSTOMS,
Washington, D. C.

To Collectors of Customs and Others Concerned:

TITLE 19--CUSTOMS DUTIES

CHAPTER I--BUREAU OF CUSTOMS

Part 6--AIR COMMERCE REGULATIONS

It has been found that the listing of accompanied baggage on the air cargo manifest, which is usually prepared prior to lading, is frequently inaccurate due to last minute changes in the number of pieces of such baggage presented for lading. Because of such inaccuracies, customs inspectors have been determining the number of pieces of accompanied baggage at the time of examination. For this purpose it is necessary that the customs officer have the total number of passengers and crew members on the flight. Therefore, the requirement for listing accompanied baggage on the air cargo manifest is being discontinued. Provision is being made for listing the total number of crew members on the general declaration when a crew manifest is not required.

The regulations of the Immigration and Naturalization Service (8 CFR Part 231) have been amended effective December 1, 1957, to provide for the manifesting of air passengers on individual card forms (Form I-94). As a result, there will be no passenger manifest

198773

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G9
198773

available for the use of customs; therefore, a provision is being made for listing the total number of passengers on the face of the general declaration.

To implement the foregoing, the Customs Regulations are amended as follows:

Section 6.6(a) is amended by placing a period after "aircraft" in the first sentence and deleting the remainder of that sentence.

Section 6.6(b) is amended to read as follows:

> (b) The forms described in sections 6.7 and 6.8 may be obtained from collectors of customs upon payment by the owner or operator of the aircraft. These forms may be printed or dittoed by private parties, provided the forms so printed or dittoed conform to the official forms currently in use, with respect to size, wording, arrangement, style and size of type, and paper specifications. A small quantity of each of the forms shall be set aside by collectors of customs for free distribution and official use.

198773

The first complete sentence of section 6.7(b)(1) is amended by deleting the period at the end and adding:

> but the total number of crew members shall be shown on the general declaration.

Section 6.7(b)(2) is amended to read as follows:

> (2) The total number of passengers shall be shown on the face of the general declaration. (Note: No passenger manifest is required for customs purposes. For Immigration and Naturalization Service passenger manifest requirements, see 8 CFR Part 231.)

Section 6.7(b)(4) is amended by deleting the first four sentences.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G10

Section 6.7(h) is amended by deleting the period at the end of the first sentence and adding "with merchandise or unaccompanied baggage." and by inserting the word "unaccompanied" before the word "baggage" wherever it appears in the paragraph.

Section 6.9(b) is amended by deleting ", or passengers," from the first sentence.

(R. S. 161, 251, secs. 624, 644, 46 Stat. 759, 761, sec. 7, 44 Stat. 572, as amended; 5 U. S. C. 22, 19 U. S. C. 66, 1624, 1644, 49 U. S. C. 177.)

These amendments shall become effective at 12:01 a.m. local standard time on December 1, 1957.

[illegible]

Interaal Advice concerning men's three piece suits - entireties question

Assuming that vests, trousers, and jackets are classifiable as entireties under the TSUS provision for suits when imported directly for consumption, you ask whether warehouse entry of the merchandise would affect the tariff classification under the following circumstances.

Separately packaged and invoiced parts of suits - vests, trousers, and jackets - are shipped from Korea to the United States, where they are placed in a customs bonded warehouse. Without being repackaged or otherwise manipulated, they are forwarded from the warehouse to domestic purchasers. The purchasers assemble the components and sell them as three-piece suits.

The entry of merchandise in a customs bonded warehouse constitutes an importation for tariff purposes, unless otherwise provided by law. Section 144.12 of the Customs Regulations states that "the entry shall show the value, classification, and rates of duty as approved by the district director at the time of entry. However, no deposit of estimated duties shall be required until the merchandise is withdrawn for consumption." Except as otherwise provided in statute and regulations, only the obligation to pay customs duties is postponed by the warehouse entry. In the case under consideration, the classification of merchandise as an entirety at the time of the warehouse entry will necessarily determine the classification and rate of duty at the time of its withdrawal.

Accordingly, upon withdrawal from bonded warehouses separate packages containing jackets, trousers, and vests should be classified and assessed duty in the same manner as if entered for consumption, even though the packages may be released under separate withdrawals at different times.

Regional Commissioner of Customs
San Francisco, CA

Director, Carriers, Drawback and Bonds Division

Presidential Proclamation 4538, dated November 11, 1977, "Import Fees on Sugar, Sirup, and Molasses."

You asked whether the import fees on sugar, sirup, and molasses that were imposed by Presidential Proclamation 4538, dated November 11, 1977, and incorporated into the Tariff Schedules of the United States (TSUS) as items 956.10, 956.20, 957.10, and 957.20 are subject to drawback under the provisions of 19 U.S.C. 1313.

Section 528 of the Tariff Act of 1930, as amended (19 U.S.C. 1528) provides as follows:

> No tax or other charge imposed by or pursuant to any law of the United States shall be construed to be a customs duty for the purpose of any statute relating to the customs revenue, unless the law imposing such tax or charge designates it as a customs duty or contains a provision to the effect that it shall be treated as a duty imposed under the customs laws.

The Customs Court held in Don W. Snyder v. United States, C.D. 2343, 48 C.C.R. 243 (1962) that section 528 applies to drawback.

In the headnote to Part 3 of the appendix to the TSUS (Schedule 9), Congress stated its intention to consider import fees proclaimed by the President pursuant to Section 22 of the Agricultural Adjustment Act, as amended (7 U.S.C. 624), to be import duties rather than internal revenue taxes. The same intention is stated in Section 22(c) of the Agricultural Adjustment Act.

DEC 9

[redacted]

Reference: Your letter dated January 22, 1980

Dear [redacted]

Your letter requests clarification of C.S.D. 79-461 concerning termination of a surety's liability under an antidumping bond.

You ask first why bonds were given on Customs Form 7591 as no finding was issued with respect to Portland hydraulic cement from Canada.

We have no information as to why Antidumping Bonds were issued by the surety and, apparently, accepted by the Customs Service. However, the information submitted by the inquirer indicated that these were the facts.

Secondly, you state that the meaning of the paragraph beginning "Accordingly" is unclear to you. You suggest that if a reliquidation under 19 U.S.C. 1521 is made on the last day of the two-year period and increased duties are found due, on the next day the surety on the bond is absolved from liability for the increased duties found due in that liquidation. The suggestion is not correct. A reliquidation, for any reason, vacates and is substituted for the original liquidation. The surety would remain liable under the bond until the reliquidation became final.

Sincerely,

George C. Steuart
Chief
Drawback and Bonds Branch

REPLY TO: COMMISSIONER OF CUSTOMS, WASHINGTON, D.C. 20229

213434

(T.D. 81-242)

Accelerated payment for same condition drawback

The Customs Service will allow persons who claim drawback under the recently enacted same condition drawback law, P.L. 96-609, 94 Stat.3555 (December 28, 1980), codified as 19 U.S.C. 1313(j), to obtain accelerated payment of drawback if certain conditions are met.

213434

In a ruling (file No. 212709) dated March 26, 1981, published as a legal determination, L.D. 81-0126, and which will be published in the Customs Bulletin as a C.S.D., the Customs Service noted that, by its very terms, the provisions of section 22.20a of the Customs Regulations applied to claims made under the manufacturing drawback law 19 U.S.C. 1313(a) and (b). At the time of the ruling, same condition drawback had existed for about three months, and no reason had been presented to warrant amendment of section 22.20a to expand the accelerated payment program.

The accelerated payment program was established to alleviate cash-flow problems associated with the liquidation of recurring, similar drawback claims. 37 F.R. 20951. Unlike rejected merchandise drawback under 19 U.S.C. 1313(c), and similar to manufacturing drawback under 19 U.S.C. 1313(a) and (b), same condition drawback is designed to stimulate claims for drawback on a recurring basis. This is evident from the Congressional expressions of intent contained in H. Rept. 96-1109, 17 (1980) and S. Rept. 96-999, 23 (1980). Same condition drawback was to supplement the procedures provided by the laws on temporary importations under bond, Customs bonded warehouses, and foreign-trade zones. The underlying intent of both manufacturing drawback and same condition drawback is to encourage United States business in export trade. That intent is accomplished in both instances by allowing a refund of duty if dutiable foreign merchandise is exported within specified time periods after importation.

In view of the similarities in processing claims under 19 U.S.C 1313(a) and (b) and 19 U.S.C. 1313(j) and the underlying purpose of those provisions, the Customs Service is persuaded that claimants of same condition drawback should be allowed to participate in an accelerated payment program. In order to expedite granting of this benefit the procedures set forth in section 22.20a will be used where possible. Any requirement in that section which is applicable to a claim under manufacturing drawback or same condition drawback is to be used. Requirements in section 22.20a which have relevance to claims for manufacturing drawback only are to be disregarded in processing same condition drawback claims. For example, the requirement that an applicant for accelerated payment secure its performance by posting an appropriate bond or bond rider is applicable to both types of drawback, as is the requirement for proving timely exportation. The requirement for proving that a manufacture or processing occurred applies

RELEASED TO THE

A4

only to a claim for manufacturing drawback. Further, if the Regional Commissioner of Customs determines that a claimant is delinquent or otherwise remiss in any transaction with Customs, the claimant is not eligible for accelerated payment of drawback.

Before accelerated payment for same condition drawback is approved, a claimant must satisfy the Regional Commissioner of Customs that the claimant's recordkeeping procedures will show that (1) the identity of the imported merchandise will be maintained on any merchandise which forms the basis of the claim, (2) any use of the merchandise will be recorded (for example, the recordkeeping procedures must be designed to record any movement of the merchandise in or out of storage), (3) any change in condition in the merchandise will be recorded, (4) the dates of importation, entry, and exportation of the merchandise will be recorded, and (5) the importer - exporter will satisfy the examination requirements of the importing and exporting Regions.

Unlike the situation in manufacturing drawback claims,there is no manufacturer's statement under claims for same condition drawback. In order to apply for accelerated payment under same condition drawback, a claimant must satisfy the Regional Commissioner of Customs that the claimant's recordkeeping procedures will meet the above five listed requirements. The Regional Commissioner will approve or deny the application for eligibility for accelerated payment of same condition drawback after reviewing the claimant's recordkeeping procedures. Until approval of the recordkeeping procedures is given, no claim for accelerated payment of same condition drawback can be accepted for processing in accordance with the procedure set forth in section 22.20a. With respect to each drawback claim thereafter, the Regional Commissioner of Customs must determine whether a claimant is delinquent or otherwise remiss in any transaction with Customs before approving that claim.

This procedure is to be applied to applications for permission to participate in the accelerated payment program for same condition drawback filed after the date of publication of this notice in the Customs Bulletin.

Re: [redacted]

Dear [redacted]

We have considered the material which you sent to us with regard to the proposed standards of substitution. In addition, we have contacted various other technical sources, including the author of the book "Peanuts Production, Processing, Products." That author pointed out that the statement in the book is qualified by the very next sentence to the one on which you are relying. Further, it has been brought to our attention that the U.S. Department of Agriculture is extremely concerned about the standards because the Department administers a price-support program that could be undermined by our adoption of inadequate standards. Based on all of the information available to us, we cannot approve the proposed standards for substitution.

However, the following standards satisfy the requirement that substitution be done on a same kind and quality basis, and may be adopted by your client.

Imported merchandise or drawback products to be designated as the basis for drawback on the exported products.	Duty-paid, duty-free, or domestic merchandise of the same kind and quality as that designated which will be used in the production of the exported products.
1. Peanuts certified as edible by the applicable Federal-State Inspection Certificate of the U.S. Department of Agriculture and imported under the authority of Presidential Proclamation 4807 December 14, 1981) during the period from December 4, 1980 to July 31, 1981.	1. Peanuts certified as edible by the applicable Federal-State Inspection Certificate of the U.S. Department of Agriculture.
2. Peanuts meeting the grade and wholesomeness standards in the outgoing quality regulations in the Marketing Agreements for Peanuts, No. 146 and substituted on the basis of equivalent screen sizes as shown by the applicable Federal-State Inspection Certificate of the U.S. Department of Agriculture.	2. Same as in left column.

29 JAN 1986

Jim J. Marquez, Esq.
General Counsel
U.S. Department of Transportation
400 Seventh Street, S.W.
Washington, D.C. 20590

Dear Mr. Marquez:

This is in reference to your letter dated December 12, 1985, asking for a review of Customs rulings holding that foreign merchandise brought to a foreign-trade zone is imported (e.g., ORR Ruling 76-0067, C.S.D. 83-21). You refer to our letter dated September 4, 1985, file FOR-1-CO:R:CD:D 218229, regarding this matter. At issue is the Motor Vehicle Theft Law Enforcement Act of 1984 (Pub. L. 98-547, 15 U.S.C. 2021 et seq.) (the Theft Act), under which no person, with certain exceptions, may import a motor vehicle subject thereto which fails to conform to the theft prevention standard promulgated thereunder (15 U.S.C. 2027, "Prohibited acts"). An association of direct importers, however, would like to place nonconforming foreign vehicles in foreign-trade zones in the United States and bring them into compliance there.

That foreign merchandise brought to a foreign-trade zone is imported is a fact routinely recognized by Congress in the legislative history underlying the Foreign-Trade Zones Act of 1934, as amended, 19 U.S.C. 81a-u (FTZA).

> "[A foreign-trade zone] aims to foster the dealing in foreign goods that are imported, not for domestic consumption, but for reexport to foreign markets and for conditioning, or for combining with domestic products previous to export" (emphasis added) (S. Rept. 905, 73d Cong., 2d Sess., 2, quoting the 1918 U.S. Tariff Commission report).

> "[A foreign-trade zone]...differs from adjacent territory in being exempt from the Customs laws as affecting goods destined for reexport. It means simply that, as regards Customs duties, there is freedom unless and until imported goods enter the domestic market" (emphasis added) (FOREIGN TRADE ZONES, REPORT OF A SUBCOMMITTEE OF THE COMMITTEE ON WAYS AND MEANS on H.R. 3657 and H.R. 9322 (later enacted as the FTZA) (House Committee Print), 73d Cong., 2d Sess., 1).

A8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

Also see section 146.1(e)(2), Customs Regulations (19 CFR 146.1(e)(2)).

It should also be observed in this regard that Congress, pursuant to the Theft Act, has stated that "[a]ny (applicable) motor vehicle not in compliance will be refused admission into the United States" (H. Rept. 98-1087, U.S. Code Cong. & Admin. News 4628, 4644 ["Prohibited Acts"]). Merchandise whose admission into the United States is prohibited by law cannot be admitted into a foreign-trade zone (see 19 U.S.C. 81c; 19 CFR 146.11).

Sincerely,

(Signed) Edward B. Gable, Jr.
Edward B. Gable, Jr.

Dear Sir:

Re: Internal Advice Request 130/83

Enclosed is a copy of our ruling on the internal advice request 130/83 which we received from the Customs Information Exchange on December 22, 1984. You may send a copy to the private party concerned. The ruling will be published in the Customs Bulletin.

This case was sent to us via the C.I.E. Circular MAN-1-0:D:C of December 17, 1974, requires a report to the C.I.E. on internal advice cases involving a classification and value issue. However, cases involving drawback, foreign trade zones, bonded warehouses, temporary importations under TSUS Items 864.05 through 864.75, and bonds should be sent directly to this Division, attention Drawback and Bonds Branch.

If a case involving drawback, foreign trade zones, bonded warehouses, TIB, or bonds also appears to contain a classification and value issue (as possibly was true in this case), the fact should be mentioned in the transmittal.

Sincerely,

Edward B. Gable, Jr.
Director, Carriers, Drawback

216575

ISSUES:

1. Whether cutting nonprivileged foreign status fabric in rolls into the bow tie shape of a vacuum cleaner bag is a manufacture in a foreign-trade zone?

2. Whether cutting nonprivileged foreign status fabric in rolls is governed by 19 CFR 146.13?

3. Whether 19 CFR 146.48 sets the procedure for exportation of an article made in a foreign trade zone?

4. Whether the sixth proviso to section 3 of the Foreign-Trade Zones Act of 1934, as amended (19 U.S.C. 81c) controls on the importation of an article made in a foreign trade zone from nonprivileged foreign status merchandise?

FACTS:

Foreign fabric on rolls is admitted in a zone as nonprivileged status merchandise. In the zone the fabric is cut into a bow tie shape about 38 inches in length, about 17 inches in width at the two ends, and about 14 inches in width in the middle. That article is exported from the zone to a foreign country for further processing into a vacuum cleaner bag. The finished bag will then be imported into the United States with a claim for an exemption under item 807.00, Tariff Schedules of the United States (TSUS).

LAW AND ANALYSIS:

In a decision published as C.S.D. 81-44 the Customs Service held that certain operations on pipe constituted a manufacture for drawback purposes and were a substantial transformation of the imported merchandise. The cutting of the fabric from a roll into a bow tie shape dedicates that shape to a particular use. The operation changed the fabric's use and character, if not its name. As such, the operation is a manufacture on the principles set in the case of U.S. v. International Paint Co., Inc., 35 CCPA 87, 93-95, CAD 376 (1948), and is a substantial transformation within the principles set in the case of Midwood Industries, Inc. v. U.S., 64 Cust. Ct. 499, 507, CD 4026 (1970).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

All

216575

The reliance on 19 CFR 146.13 is misplaced. The statutory basis for the provision was the amendment to section 562 of the Tariff Act of 1930 by the Customs Administrative Act of 1938. Act of June 25, 1938, Pub. L. 75-679, section 25, 52 Stat. 1077, 1088. The purpose of the amendment was to give to the Secretary of the Treasury discretion to allow manipulations to be done elsewhere than in bonded warehouses. S. Rept. 2677, 75th Cong., 8 (1938); Congressional Record, Senate, page 6019 (April 1, 1938); and an undated memorandum entitled "Amendments To Be Proposed By Treasury to H.R. 8099, Pending Before The Senate Finance Committee;" page 2. The argument has two weaknesses. The provision relied on, 19 CFR 146.13, requires compliance with the statute, 19 U.S.C. 1562 and 19 CFR 19.11. The statute expressly proscribes manufacturing. It is inconsistent to argue that the operation is a manufacture for the purpose of item 807.00, TSUS, but is not a manufacture for the purpose of 19 CFR 1562. Further, by its very terms 19 CFR 146.13 requires compliance with 19 CFR 19.11. Paragraph (e) of 19 CFR 19.11 requires that in order for merchandise to be manipulated outside of a Customs bonded warehouse the merchandise must be entered for warehouse or for consumption.

Reliance on 19 CFR 146.48 is also misplaced. That provision regulates the entry of merchandise from a zone to the Customs territory and not merchandise that is to be exported from a zone to a foreign country. Exportation of merchandise from a zone is regulated by 19 CFR 146.44.

Because the proposed manufacture is to be done in a zone, the Foreign Trade Zones Act of 1934, as amended (19 U.S.C. 81a-u), controls. The sixth proviso to 19 U.S.C. 81c provides that an article produced in a zone and exported from the zone and then later imported into the Customs territory is subject to the import laws applicable to like articles manufactured in a foreign country. The proviso makes such articles dutiable and taxable as if manufactured in a foreign country. S. Rept. 1107, 81st. Cong. (1949). The purpose of the provision is to prevent the duty avoidance scheme proposed here.

HOLDINGS:

1. Cutting fabric in rolls into a bow tie shape that is to be made into a vacuum cleaner bag is a manufacture.

RELEASED TO THE

A12

2. The provisions of 19 CFR 146.13 have no application to nonprivileged foreign status merchandise that is manufactured into another article in a foreign trade zone.

3. The provisions of 19 CFR 146.48 have no application to articles made in a zone from nonprivileged foreign status merchandise when those articles are removed from a zone for exportation.

4. The sixth proviso of 19 U.S.C. 81c controls the subsequent duty treatment of articles that are made in a zone, exported, and then imported back into the Customs territory.

Dear [redacted]

Your letter of July 20, 1984, which asks the formalities and conditions to be observed in bringing a tennis trophy into the United States for exhibition at a press conference for a period of 3 or 4 days, was not received until August 17, 1984.

All articles imported into the customs territory of the United States from outside thereof are subject to duty unless specifically exempt.

If the trophy will accompany and is for the use of a nonresident of the United States who will conduct the press conference it may be admitted temporarily free of duty under bond under item 864.50, Tariff Schedules of the United States, as professional equipment. The article must not be imported for sale or sale on approval and must be exported within 1 year from the date of importation. The bond is taken in an amount equal to 110 percent of the estimated duty that would be due if the article were entered for consumption. The procedure is set out in section 10.31, Customs Regulations, copy enclosed.

Alternatively, you may wish to use an ATA carnet, which would be issued in Belgium. A brochure describing carnets is enclosed.

If the trophy is not accompanied by a nonresident, we are aware of no provision of law under which it could be admitted without entry and payment of duty. However, if the trophy is not altered or used in any way other than exhibition it may be eligible for same condition drawback, see (9) in the enclosed "Drawback" brochure, and section 191.141, Customs Regulations. Note that Customs at the place where the article is to be exported must be given the opportunity to examine it before exportation.

Sincerely,

ISSUE:

The issue is whether soybean meal that meets the standard specifications of the rules published by the National Soybean Processors Association satisfies the fungibility requirements of the substitution same condition drawback law.

FACTS:

A manufacturer of domestic soybean meal proposes to substitute (domestic) 44% Protein Soybean Meal for imported duty-paid 44% Protein Soybean Meal and export the domestic merchandise for substitution same condition drawback. The manufacturer cites Rule 2 of the Trading Rules For The Purchase and Sale of Soybean Meal published by the National Soybean Processors Association (NSPA) and claims that substituted and imported protein soybean meal that meets either the Standard Specifications of Section 3A, 44% Protein Soybean Meal, or Section 3B, High Protein Soybean Meal, on a type for type basis, are fungible and identical for drawback purposes.

The Standard Specifications, Section 3A for 44% Protein Soybean Meal, are as follows:

Minimum Protein.....44.0%

Minimum Fat.....0.5%

Maximum Fiber.....7.0%

Maximum Moisture.....12.0%

The Standard Specifications, Section 3B for High Protein Soybean Meal, are as follows:

Minimum Protein.....47.5 to 49.0%*

Minimum Fat.....0.5%

Maximum Fiber.....3.3 to 3.5%*

Maximum Moisture.....12.0%

*(As determined by Buyer and Seller at time of sale)

31

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In addition, Section 3C provides that a non-nutritive, inert, non-toxic conditioning agent may be added not to exceed 0.5% or 10 bls. per ton by weight of the total meal product. The manufacturer also states that the substitution will be on the basis of conditioner for conditioner or no conditioner for no conditioner.

Section 5, Adjustments For Quality provides that within certain narrow ranges of variances of the specifications, a buyer must accept shipments without the right to rejections or the assessments of penalties. If the shipments exceed the variances, a buyer has various options such as negotiations, rejections or the assessments of penalties. The manufacturer further states that the substituted and designated soybean meal will not be subject to negotiations, rejections or the assessments of penalties but will fall within the accepted narrow ranges of variances.

LAW AND ANALYSIS:

For purposes of this decision, we presume that the manufacturer has met all requirements of law (19 U.S.C. 1313(j)(3)) and regulations (19 CFR 191.141(h)) for substitution same condition drawback except for the issue presented concerning fungibility.

In part, the law requires that the merchandise substituted for exportation must be fungible with the imported duty-paid merchandise and in the same condition as was the imported merchandise at the time of its importation. The term "fungible merchandise" is defined in the Customs Regulations (19 CFR 191.2(1)) as "merchandise which for commercial purposes is identical and interchangeable in all situations." See Customs Service Decision 85-52 for a full discussion concerning fungibility.

The manufacturer claims that two shipments of soybean meal that meet the specifications of the NSPA on a type for type basis, conditioner for conditioner basis, and are not subject to negotiations, rejections or penalties at the option of the buyer are for commercial purposes identical and interchangeable in all situations. The position of the manufacturer is supported by the NSPA which opined that the merchandise "is identical, totally interchangeable and fungible regardless of the origin of the raw soybean meal and is so recognized by traders and users throughout the world." The NSPA further opined that their "rules for soybean meal are the most widely used rules in domestic and international trade under which soybean meal is traded and are incorporated by reference in most transactions." We have no information that differs with the opinions of the NSPA.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

HOLDING:

Two shipments of soybean meal which meet the standard specifications of the National Soybean Processors Association on a type for type basis (i.e., 44% Protein Soybean Meal for 44% Protein Soybean Meal or High Protein Soybean Meal for High Protein Meal), on a conditioner for conditioner basis and are within the acceptable narrow variances of the rules of the Association are fungible for purposes of the substitution same condition drawback law.

Mr. D. Morgan Hackman
Productos Alimenticios Morgan S.R.L.
Calle Guido 1551 - 7° piso
Buenos Aires 1016
Argentina

Dear Mr. Hackman:

You state that you wish to ship peanuts to a foreign trade zone (FTZ) in the United States to process into peanut butter for entry into the United States while awaiting quota. You ask if this is a permissible operation.

Peanuts provided for in items 145.20, 145.31, and 145.48, Tariff Schedules of the United States (TSUS), but not peanut butter, are subject to import restrictions under item 951.00, TSUS, whenever, in any 12 month period beginning August 1 in any year, the aggregate quantity of 1,709,000 pounds has been entered.

Peanuts admitted to a FTZ are imported into the United States but are not entered and are not subject to the import restrictions unless and until they are removed from the FTZ and entered for consumption.

Except as is prohibited by law, foreign and domestic merchandise of every description maybe brought into a FTZ and stored, sold, exhibited, broken up, repacked, assembled, distributed, sorted, graded, cleaned, mixed with foreign or domestic merchandise, or be otherwise manipulated or manufactured, and be exported, destroyed, or sent into the customs territory of the United States. When sent into the customs territory of the United States it becomes subject to the laws and regulations affecting imported merchandise.

There is no prohibition against the manufacture of peanut butter from imported peanuts in a FTZ. However, you should be aware that the Foreign Trade Zones Board, pursuant to 19 U.S.C. 81o(c), may at any time order the exclusion from the FTZ of any goods or process of treatment that in its judgement is detrimental to the public interest, health, or safety.

If you intend to enter for consumption peanut butter made in a FTZ from over-quota peanuts imported into the FTZ, that action may be deemed to have the effect of circumventing a quota.

B4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

Accordingly, it is strongly recommended that you obtain clearance for the proposed operation from the Executive Secretary, Foreign Trade Zones Board, U.S. Department of Commerce, Washington, D.C. 20230.

A copy of this letter is being sent to the Foreign Trade Zones Board. For your information, a brochure generally describing foreign trade zones is enclosed.

This is an information letter within the meaning of 19 CFR 177.1(d)(2).

Sincerely,

(Signed) William G. Rosoff

Mr. Fred R. Boyett
Regional Commissioner of Customs
New York, New York 10004

Dear Mr. Boyett:

T.D. 54109-C, as amended, and particularly as amended by T.D. 66-63-A, authorizing the allowance of drawback on, among other things, chemical products and chemical intermediates manufactured under section 1313(b), title 19, United States Code, by Merck & Company, Inc., Rahway, New Jersey, at its various factories with the use of various chemicals, is hereby further amended to cover DL Acetyl Aminonitrile (Virgin), D Acetyl Aminonitrile, DL-N Acetyl Aminonitrile (Racemate), and L Acetyl Aminonitrile, manufactured under section 1313(b), by the corporation at its various factories with the use of vanillin, acetic anhydride and acetic acid glacial USP.

There is enclosed, approved, a copy of the manufacturer's supplemental statement subscribed to on May 15, 1972, requesting the foregoing action and containing the manufacturer's proposals as to the procedures it will follow and the records it will keep. Such records shall include those prescribed in section 22.5(a)(1) through (6) of the Customs Regulations, The said records shall also show the quantity of vanillin, acetic anhydride, and acetic acid glacial USP, respectively, of the same kind and quality as that designated, which was used in the manufacture of the exported products, such quantity to be distributed to these products in accordance with their relative values at the time of separation. The time of separation shall be considered to be as set forth in the statement.

The quantity of imported merchandise, or of such merchandise manufactured under drawback regulations, of the required kind and quality, which may be designated as the basis for the allowance of drawback hereunder shall not exceed a quantity of each class of merchandise, respectively, equivalent to the quantity of such

DOCUMENT MAY BE RELEASED TO THE

299585

merchandise, of the same kind and quality as that designated which was used in the manufacture of the exported articles and is attributable thereto as determined in accordance with the provisions of the preceding paragraph, as shown by an abstract of the manufacturing records which shall be filed with the drawback entry.

This rate shall be considered to be, in effect, a "single lot" rate, in that it is intended to cover only those operations which begin August 2, 1971, and terminate October 30, 1971.

Drawback may be allowed hereunder, upon compliance with the law and regulations, on the articles covered hereby which are manufactured and exported on and after August 2, 1971. Exportation shall be made within 5 years after exportation of the imported merchandise.

There is enclosed an extra copy of the manufacturer's drawback statement and of this authorization, which may be furnished with the first drawback claim filed hereunder to the special agent in charge, pursuant to section 22.4(g) of the Customs Manual.

Sincerely yours,

Manifest Discrepancy: Reporting Requirements
T Newsprint

LEGAL DETERMINATION 3135-01

OCT 17 1977

REFER TO

VES-B-01 R:E:E
304379 M

Dear

This is in reply to your letter of in behalf of , requesting that newsprint transported by that carrier from British Columbia to Honolulu be exempt from the manifest discrepancy reporting requirements set forth in section 4.12(a) of the Customs Regulations.

One of the main purposes of the Quantity Control Program instituted by T. D. 71-22, effective April 1, 1971, was to implement a uniform system for reporting and accounting for discrepancies in manifested and unladen quantities of merchandise. Prior to the institution of this program, this matter was a considerable problem for carriers, the importing public, and the Customs Service. After the program was ongoing for several years, it was recognized that the original 30 day time limitation for reporting manifest discrepancies was too restrictive and section 4.12(a) was amended by T. D. 76-81 (copy enclosed) to provide for the present time limitations of 60 days from the date of the entry of the vessel or 30 days after having been notified by Customs of the discrepancy.

We believe that the present time limitations are reasonable and can see no reason why newsprint should be exempt from the manifest discrepancy reporting requirements. For example, Customs imposes the quantity

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B8

control requirements on a shipload of general cargo, which will consist of 45,000 to 60,000 pieces of cargo. A shipload of newsprint, on the other hand, will consist of only about 4,000 to 5,000 pieces which can easily be counted.

You suggest that newsprint might be considered bulk merchandise and thus exempt from the manifest discrepancy reporting requirements by section 4.12(b) of the Customs Regulations. Section 4.12(b) provides that "a correction in the manifest shall not be required in the case of bulk merchandise if the district director is satisfied that the difference between the manifested quantity and the quantity unladen, whether the difference constitutes an overage or shortage, is an ordinary and usual difference properly attributable to absorption of moisture, temperature, faulty weighing at the port of lading, or other similar reason."

Since the quantity of large rolls of newsprint can be readily ascertained and any difference between the manifested quantity of merchandise and the quantity unladen would not ordinarily be attributable to absorption of moisture, temperature, faulty weighing at the port of lading, or other similar reasons, it is our opinion that section 4.12(b) is not applicable to large rolls of newsprint. Consequently such newsprint would be subject to the manifest discrepancy reporting requirements of section 4.12 of the Customs Regulations.

Sincerely yours,

(Signed) Harvey B. Fox

Request for Internal Advice #178-77; Dutiability of Commission paid to [redacted]

This is in reference to your memorandum of November 1, 1977, concerning the dutiability of an alleged commission paid by [redacted] to [redacted]

The record shows that [redacted] paid [redacted] a 5 percent "commission" based on the price invoiced to [redacted], allegedly, as stated in the Agency Agreement between the parties, for services rendered in connection with the placement of orders, inspection, shipments, and for preparing the necessary documents, etc. The Agreement provided that [redacted] "does not act as seller to [redacted] but acts as a buying agent for [redacted] . . . ." The manufacturer, [redacted], stated in a letter addressed to [redacted] that "our prices to customers remain the same with or without agents acting on behalf of the customers," and "Customers have the option of obtaining agents to follow up (on) necessary details."

Investigation in Hong Kong revealed that [redacted] owns 20 percent of [redacted] that all transactions between [redacted] and [redacted] were direct orders (from [redacted]; that [redacted] did not receive any rebate or commission from [redacted] and that [redacted] accepted the importer's purchase order prior to contracting with [redacted] for the manufacture of the merchandise.

Earlier shipments arriving at your port showed [redacted] as the seller on the SCI and commercial invoice. Recent shipments show [redacted] as the seller on the SCI and [redacted] as the seller on the commercial invoice.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

B10

541688

There is no evidence of any contract or purchase orders and/or confirmations running from [redacted] to [redacted].

To qualify as a bona fide buying agent, the evidence must establish that a principal-agent relationship exists between the purported agent and the United States importer and that the importer exercises control over its agent. (See B & W Wholesale Co. v. United States, C.A.D. 1010 (1971)). Services such as procuring merchandise, inspecting it, arranging for shipment, and paying for the account of the buyer are those generally performed by buying agents. (See United States v. Manhattan Novelty Corp., A.R.D. 263 (1969)). However, labels attached by the parties are irrelevant. What is important are the actual circumstances of the case. No single factor is determinative, as all factors are to be weighed and balanced so that each case will be governed by its own facts. (See Dorf International v. United States, 61 Customs Court 604, A.R.D. 245 (1968)). In this regard, a financial relationship between the alleged agent and the manufacturer invites close scrutiny as to the bona fides of a buying commission, but is not necessarily determinative of the issue. (See Tapetes Luxor, S.A., et. al. v. United States, C.A.D. 1104 (1973)).

That the merchandise was or could have been purchased without payment of the "commission" would lead to the conclusion that [redacted] had selected [redacted] and was directing the latter's actions. However, this does not accord with the evidence in this case. Thus, the record indicates that [redacted] only does business through [redacted] that [redacted] has appeared as a seller in previous transactions involving other importers, and that in some instances, the services of a different agent had been used when dealing with [redacted].

The importer claims that the invoice price from [redacted] (excluding the 5 percent payment) was higher than [redacted] price to [redacted] because of the purchase by the latter of quotas and that the cost was passed on to the United States company. This claim has not been substantiated and thus is a factor militating against the bona fides of the alleged agency, since the difference in price would appear to be an additional profit to [redacted]. Even if true, however, it would not aide the importer's cause since it would not establish that [redacted] was in fact controlled by the importer.

B11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

In conclusion, aside from the Agency Agreement, there is little evidence in the file to support the importer's assertions that a bona fide buying agency existed. It appears that [redacted] looked to [redacted] for payment and not to [redacted] Neither does the evidence demonstrate that [redacted] exercised control over the activities of the purported agent. Rather, the weight of the evidence clearly establishes that the legal relationship between [redacted] and [redacted] was that of buyer and seller, that the 5 percent "commission" was profit to [redacted] and therefore should be treated as a dutiable element of value.

Mr. James Arnold
Assistant District Director
Classification and Value Division
U.S. Customs Service
Terminal Island, California 90731

Dear Mr. Arnold:

This is in reference to your letter of November 23, 1979, concerning the current status of Headquarters Cicular PRO-1-CV, dated June 19, 1972. The subject Circular involves requests for suspension of action on protests pending resolution of a test case before the Customs Court. In view of the Circular's age and its infrequent utilization by protestants, you ask if it is no longer in force.

It is our opinion that the Circular remains in effect and the guidelines contained therein are valid. We note that as per a telephone conversation between a member of my staff and Mr. Robert Kerstein of the Los Angeles Protest Section on December 13, 1979, Headquarters would be willing to consider any proposed revisions to the Circular which your office might care to submit.

Sincerely,

[signed] Irving W. Smith, Jr.

Salvatore E. Caramagno
Director
Classification and Value Division

[redacted]

Dear [redacted]

This is in further reference to your letter of November 4, 1980, with enclosure, requesting a ruling as to whether a customhouse broker's fee can be deducted under a deductive value appraisement involving related parties.

Before addressing your question, we should point out that a transaction between related parties cannot be appraised under deductive value because section 402(d)(2)(B) provides, in pertinent part that:

> "(B) For purposes of subparagraph (A), the unit price at which merchandise is sold at the greatest aggregate quantity is the unit price at which such merchandise is sold to <u>unrelated</u> persons...(Emphasis added.)

However, since we assume that you wish us to rule generally on the status of a broker's fee under deductive value, our opinion is as follows.

Deductive value (section 402(d)) is the resale price in the United States, after importation of the goods, with certain deductions. The deductions relevant to your question are cited in section 402(d)(3)(A), which in pertinent part provides that the deductive value of the merchandise being appraised shall be reduced by an amount equal to-

> (i) any commission usually paid or agreed to be paid, or the addition usually made for profit and general expenses, in connection with sales in the United States of imported merchandise that is of the same class or kind,...
>
> ***
>
> (iii) the usual costs and associated costs of transportation and insurance incurred with respect to shipments of such merchandise from the place of importation to the place of delivery in the United States, if such costs are not included as a general expense under clause (i);

Bi4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

542267

We conclude that a customhouse broker's fee for entering imported merchandise should, as appropriate, be deducted either as a part of the addition usually made for general expenses, or as an associated cost of transportation from the place of importation to the place of delivery in the United States, if such cost is not included as a general expense.

Sincerely,

(Signed) Harvey B. Fox

Internal Advice No. 6/81; Dutiability of Commissions

The issues raised in the above-captioned matter are as follows:

(1) Where the bona fides of an agency relationship and the price actually paid or payable are established by appropriate documentation with respect to an agent and one manufacturer/seller, is it necessary to require similar documentation of each transaction involving the same agent when dealing with different manufacturers/sellers?

(2) Where a past practice existed of treating a commission as non-dutiable based on the existence of a bona fide buying agency agreement, would it be appropriate to continue this practice instead of requiring the manufacturer's/seller's invoices?

The concerned import specialist advises that under prior law, it was the practice to consider the commissions paid by the importer to the involved agent to be bona fide buying commissions and therefore non-dutiable. This non-dutiability was established solely on the basis of a buying agency agreement on file in your office.

Because of the new requirements established under the Trade Agreements Act of 1979 (TAA), the import specialist requested copies of the actual manufacturer's invoices for entries of merchandise exported after July 1, 1980. An invoice from one of the manufacturers has been submitted, and it establishes that the price actually paid to the seller does not include any amount for commissions. However, on the involved entry there are ten different actual manufacturers/sellers, and on another entry, apparently involving the same agent, eight additional manufacturers are involved. The import specialist believes that the evidence establishing the bona fides of the buying agency relationship between the agent, and the one manufacturer/seller should suffice to establish the non-dutiability of the other transactions although different manufacturers are involved.

C2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

for commission, an invoice or other appropriate document from the manufacturer/seller is required for each manufacturer and agent involved, with the caveat as noted above as provided under Operating Instruction No. 4;

(2) The evidentiary requirements under (1) above, must still be satisfied even though there existed a past practice of treating a commission as non-dutiable based on the existence of a bona fide buying agency agreement.

Harvey B. Fox

CODE AND DATE	[redacted]						
SURNAME							
CODE AND DATE							
SURNAME							

DEPARTMENT OF THE TREASURY · U S CUSTOMS SERVICE CORRESPONDENCE APPROVAL AND CLEARANCE Form 100 (11-15-73)

Further, he asks whether it would be appropriate to continue the past practice of treating a commission as non-dutiable based on the existence of a bona fide buying agency agreement instead of requiring the manufacturer's/seller's invoices. You note that in past years you have found that in certain transactions some commissionaires actually purchased for and on the order of the importers, while other commissionaires purchased and stocked the merchandise, becoming sellers when orders were received from importers.

Although you agree that the price paid or payable to the seller in the transaction under consideration is controlling, you believe that a requirement to secure the seller's invoices for each of the hundreds of separate transactions received in a series of entries in a matter of weeks would not be feasible in terms of workload and staffing.

Therefore, it is your opinion that if the invoice from the commissionaire shows the commission separately from the invoiced unit values, and if the commissionaire has previously been established as in the instant example as a buying agent for the importer in question, such qualifications spot checked periodically, the commission should not be part of dutiable value.

While our New York office agrees that the invoicing requirements under the TAA are burdensome in this regard, that office is of the opinion that verification of each agent's relationship is necessary in view of the fact that, as you note, an "agent" can wear two hats in two different transactions, i.e., as a commissionaire in one transaction and as a seller in another transaction.

There is no provision under the TAA for deducting a "buying commission" from the price paid or payable. Therefore, if such commission is part of the price paid or payable and no separate transaction is shown reflecting such separate charge, the buying commission would be dutiable.

Operating Instruction No. 4, dated August 13, 1980, essentially follows these requirements, but also provides that once it is established through appropriate documentation that the price paid or payable does not include an amount for commissions and the commissionaire is neither a seller nor controlled by, nor working for or on behalf of, a manufacturer or seller, Customs entries of this merchandise, from this seller to this buyer need not include the seller's invoice or order confirmation to re-establish the non-dutiability of the agent's fee or charge.

Under these circumstances, we conclude as follows:

(1) In order to establish, under the TAA, that a commission is bona fide and that the price actually paid or payable did not include an amount

Production of Diamond Needles by [redacted] I.A. 134/81

This is in reply to your memorandum dated July 9, 1981, concerning the subject importations. The file was forwarded to Headquarters on August 14, 1981. An additional submission was made by counsel for [redacted] on November 5, 1981.

The merchandise concerned is unfinished diamond needles purchased by [redacted] (importer) from [redacted] (exporter). The parties are unrelated to each other. The initial issue presented by the importer was whether any of the kinds of equipment or machinery identified in the incoming submission provided the exporter by the buyer constituted "tools, dies, molds and similar items used in the production of imported merchandise" or any other form of assist, as set forth in section 402(h)(1)(A) of the Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA). Our initial review of the contract disclosed that since cash payments were made according to the contract by the buyer to the seller which permitted the purchase of the machinery in question, the primary question which has to be answered under the TAA is whether this payment is part of the price "actually paid or payable" within the meaning of section 402(b)(4)(A) of the TAA. In this regard, section 402(b)(4)(A) provides:

> (A) The term 'price actually paid or payable' means the total payment (whether direct or indirect, and exclusive of any costs, charges, or expensed incurred for transportation, insurance, and related services incident to the international shipment of the merchandise from the country of exportation to the place of importation in the United States) made, or to be made, for imported merchandise by the buyer to, or for the benefit of, the seller.

Therefore, the question to be resolved became whether this payment was part of the "total payment... for imported merchandise...." within the meaning of the statute.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

cs

54 2666

Paragraph 1 of the contract between the importer and exporter provides:

> 1. [redacted] agrees to buy and [redacted] agrees to sell 995,000 natural diamond logs as described in paragraph 3 below and [redacted] agrees to buy and [redacted] agrees to sell 280,000 diamond video styli as described in paragraph 4 below during the period 1980 through January 1983 on the terms and conditions herein provided.

Paragraph 2 of the contract begins:

> 2. [redacted] acknowledges that [redacted] does not have sufficient facilities and tools necessary to supply the natural diamond logs and diamond video styli contemplated by this Agreement and, accordingly, agrees to advance to [redacted] up to 2,168,000 Dutch Guilder (Dfl.) to enable [redacted] to procure additional facilities and tools....

Paragraph (e) provides:

> E. All facilities and tools purchased shall be the property of [redacted] advances of money toward the purchase of facilities and tools are in the nature of advance payments for the natural diamond logs and and diamond video styli to be provided by [redacted] under this Agreement. The advance herein provided shall not be set off against the sales prices of schedules A and B hereof. However, [redacted] agrees that, since the facilities shall have been acquired at [redacted] expense specifically to produce natural diamond logs and diamond video styli under this Agreement, promptly after completion of the last delivery under this Agreement it should pay to [redacted] the then current value of these facilities and tools. The value of the manufacturing facility shall be the then current book value after deduction of any applicable subsidies paid to [redacted] depreciation to be calculated at the rate of three and one-third percent (3.33%) per year. The value of the tools and any movable personal property shall be the then current salvage value, but [redacted] shall have the right to direct disposition of the tools movable property in any way that would maximize the value or otherwise benefit [redacted]

Counsel in a letter dated November 5, 1981, explains that the May 1980 contract between [redacted] and [redacted] was the result of substantial negotiations between the parties. Based upon its reputed expertise in the field of diamond cutting, [redacted] was chosen by [redacted] to supply newly-developed types of diamond logs and styli for incorporation into the [redacted] Video Disco system. [redacted]

C6

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

initially rejected [redacted] proposal because it was not capable of handling such a long-term supply commitment at its then-current facilities and was not interested in expanding those facilities to support a totally unproven product. In short, [redacted] was unwilling to commit its resources to the facilitation necessary to produce a million logs for a product that had no consumer acceptance. If the product did not succeed, [redacted] did not want to be stuck with an investment in facilities it would be unable to use. Therefore, to induce [redacted] to agree to make a long-term commitment to produce the large quantities of logs and styli [redacted] agreed to fund [redacted] capital requirements for facilities and equipment expansion, to the extent necessary for such production, under the following terms:

1. [redacted] agreed to advance [redacted] up to a maximum of 2.168 million Dutch Guilders to acquire the equipment and facilities necessary for [redacted] to execute its obligations under the contract. The foregoing amount is specifically described in the contract as a maximum amount, and not a fixed obligation (paragraph 2.A. and C.). Furthermore, [redacted] was expected to use its best efforts to obtain Netherlands Government subsidies to finance its actual facilities and equipment costs, and was required to reimburse [redacted] promptly in the event, and to the extent, that facilities purchased with [redacted] advances are the subject of subsidies already received by [redacted]

2. [redacted] required [redacted] to agree that no part of the money advanced by [redacted] for [redacted] facilities and equipment costs be "... set off against the sales price of Schedules A and B ..." of the Contract (see paragraph 2.3. and Schedules A and B attached to the Contract). Schedules A and B outline all components of the sales prices of the natural diamond logs and styli to be manufactured by [redacted]. Facilities and equipment costs are not included in the Schedule A and Schedule B sales prices, nor are such costs "backed out" of the sales prices listed in those Schedules. Indeed, there is no mention in the Schedules of any reduction in the sales prices of diamond logs or styli in the event that no portion of the advance is repaid. Nor is there any provision for a price increase in the event that the facilities cost more than [redacted] maximum advance obligation.

3. [redacted] agreed (paragraph 2.E.) to repay to [redacted] promptly after completion of the last delivery under the Contract the then current value of the last acquired facilities and the current salvage value of the equipment acquired to perform its obligations under the Contract, computed in accordance with a fixed formula set forth in the foregoing paragraph.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C7

54 2666

4. After fulfilling its production obligations under the Contract and reimbursing [redacted] for the respective current and salvage values of the actual facilities and equipment, [redacted] is required to retain those new facilities and equipment for a period of two (2) years, and to use that additional capacity to provide for [redacted] a priority treatment in fulfilling any subsequent orders that [redacted] might place for the same merchandise during that additional two-year period (Paragraph 2.G.).

Under these circumstances, our review of the submitted evidence discloses that because of the agreement by the exporter to pay the importer the current value of the facilities and tools obtained, with the money advanced, at the end of the production period, this cash advance has many of the attributes of a loan. This type of advance is not tied to the payment for the imported merchandise. In fact in the words of counsel, this advancement represents a "bonus consideration", that is, the advances were given by [redacted] to [redacted] as an inducement for [redacted] to enter into the contract as a whole. The money advanced enabled the latter to build the facilities and install the equipment necessary to produce styli for the importer. This clearly represents a separate undertaking or transaction from the payment for the imported merchandise.

Accordingly, this money is not part of the "price actually paid or payable for the imported merchandise...." This distinction is in accord with section 402(b)(4) of the TAA, which provides:

> (A) The term 'price actually paid or payable' means the total payment (whether direct or indirect, and exclusive of any costs, charges, or expenses incurred for transportation, insurance, and related services incident to the international shipment of the merchandise from the country of exportation to the place of importation in the United States) made, or to be made, for imported merchandise by the buyer to, or for the benefit of, the seller.

Thus, in our opinion, payments relating to the imported merchandise would be part of the "price actually paid or payable" while payments unrelated to the imported merchandise would not be part of the "price actually paid or payable." This distinction has been alluded to in previous rulings. See for instance TAA No. 31, June 11, 1981, wherein we stated "interested payments made by the buyer to the seller that are arranged as part of the invoice transaction are part of the "total payment..."." In accord is TAA No. 43, dated December 17, 1981, wherein we stated, "...it appears to us that this type of separate financing arrangement, fully documented as being separate from the import transaction, is not part of the price actually paid or payable for the imported merchandise...."

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

C8

542666

In short, the question of whether a financial arrangement between the buyer and seller is part of the "price actually paid or payable" is a question of fact which must be determined on the basis of evidence available with regard to that particular transaction. Under the facts of this case, we find that the payments in question were not "part of the price actually paid or payable," and, therefore, are not part of the transaction value of the merchandise.

District Director of Customs
Savannah, Georgia 31401

Dear Sir:

Re: Application for Further Review of Protest No. 1703-3-000049, dated February 11, 1983

This protest was filed against your inclusion, under transaction value, of an alleged 3 percent buying commission paid on material for circuit board drills imported by Sanko Trading Co., Inc.

The only supporting document the protestant furnished is a credit dated October 26, 1982, from Sanko Ltd. in Japan to the importer for a 3 percent commission. Though the protest states that a copy of the buying agreement is attached, none is in the file.

A 1979 Importer's Premises Report (CF213) from Chicago indicates that the importer is a selling agent operating as the sales office for Sanko, Japan. The credit note supports the contention that the 3 percent commission is in fact a selling commission paid by Sanko, Japan to its agent, Sanko, U.S.A. There is no apparent reason for the importer to be paid a commission by Sanko, Japan unless it was acting on its behalf as a selling agent.

If Sanko, Japan was acting as a buying agent for Sanko, U.S.A., then no proof has been submitted to establish who was the actual manufacturer.

Pursuant to TAA #7, there is no authority for deducting the commission as a non-dutiable charge. Please deny the protest in full, and send the protestant a copy of this decision with your notice of action on the protest.

Sincerely,

[redacted]

David L. Eaton, Esq.
Schulman, Silverman & Eaton, Ltd.
19 South LaSalle Street
Chicago, Illinois 60603-1498

Dear Mr. Eaton:

This is in reference to your letter of March 17, 1986, on behalf of Bloch Lumber Company, Inc., and your follow-up letter of April 29, 1986, in which you ask whether this office will accept as an internal advice request a letter which you submitted to the District Director of Customs, Detroit, Michigan, dated July 12, 1985. The issue concerns the proper valuation of certain shipments of waferboard imported by your client from Canada.

As we understand the facts involved in this case, your client, an Illinois corporation, purchases and imports waferboard products from various unrelated sources in Canada. The terms of the purchase generally are "F.O.B. mill" and, accordingly, your client takes title at the mill and is responsible for the shipment of the merchandise from the mill to various "staging yards" in Canada where the products are sorted and consolidated. Because of the length of time between your client's placement of orders for waferboard products and the ultimate consolidation of the products at the staging yards, your client frequently is able to obtain orders for the resale of the products to unrelated United States purchasers prior to the products' consolidation at the staging yards. Your client's Chicago office invoices the United States resale customers after the goods leave the staging yards.

You contend in your July 12, 1985, letter to the District Director, Detroit, that in those situations in which your client is able to resell the merchandise prior to its consolidation at the staging yards in Canada, transaction value clearly should be based upon the sale from the mills to your client. However, in a letter to you dated February 28, 1986, the Assistant District Director (Classification and Value) advised that the resale price from your client to its United States customers should be the basis for a determination of transaction value. Moreover, the Assistant District Director denied your request for internal advice regarding this issue for the reason that "this issue has been well established by Service Headquarters in Washington, D.C."

543 746

C11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

We have enclosed for your information a copy of a ruling dated May 6, 1986 (543687), which this office recently issued concerning the appraisement of waferboard from Canada. We stated in that ruling (page 2) that:

> ... if sales for exportation to the United States actually occur from the border reload point (in Canada), and these sales are the sales that directly cause the merchandise to be exported from Canada, then transaction value would be based upon those sales.

Applying the above-quoted statement to the facts involved in your case, it is our opinion that the sales from your client to its United States customers are the sales which most directly cause the merchandise to be exported to the United States. Therefore, we agree with the view expressed by the Assistant District Director, in his letter to you of February 26, 1986, that transaction value should be based upon these sales rather than the sales from the Canadian mills to your client.

Sincerely,

(Signed) Harvey B. Fox

30 SEP 1986

CLA-2 CO:R:CV:V
543750 EGK

Area Director of Customs
Kennedy Airport Area
Jamaica, New York 11430

Dear Sir:

Re: Decision on Application for Further Review of Protest No. 1001-5-006753

The above-referenced protest was filed against your decision in the liquidation of various entries consisting of fabric imported by the Print Game Ltd., Rag International Inc., and Harbern Fabrics, Inc. (related companies, i.e., all owned by same person--hereinafter referred to as importer).

The importer contracted to purchase fabric from a foreign seller through the seller's subsidiary in the United States. A sales contract was entered into between the foreign seller and the importer, and a commercial invoice was issued by the subsidiary to the importer which showed the actual agreed-upon price. This amount was paid by the importer to the subsidiary under a domestic letter of credit. Due to free quota considerations, the foreign seller issued a commercial invoice which covered the same merchandise at a higher price. The invoice presented to Customs for entry purposes listed the "higher" of the two prices. No other invoice was submitted to Customs.

The higher price was paid by the subsidiary to the foreign parent corporation by letter of credit. Subsequent to this payment, the foreign parent corporation returned the difference between the higher and lower price to the subsidiary. This was done by an international money transfer. The importer was not involved in any way in these transactions between the foreign parent corporation and its domestic subsidiary.

All parties agree that the merchandise is to be appraised pursuant to transaction value under section 402(b), Tariff Act of 1930, as amended by the Trade Agreements Act of 1979 (TAA). However, the protestant is requesting that the entries be reliquidated and claims that the price actually paid by the importer for the merchandise represents its transaction value, rather than the higher price originally paid by the subsidiary.

543750

C13

DOCUMENT MAY BE RELEASED TO THE PUBLIC

We agree with the protesting party that the price actually paid or payable for the imported merchandise is represented by the agreed-upon contract price, i.e., the price which was actually paid by the importer. The sales contract between the importer and the foreign seller is evidence of the price actually paid or payable for the merchandise. The subsequent transactions which took place between the foreign seller and its domestic subsidiary have no bearing on the issue to be resolved. These transactions are independent of the importation between the foreign seller and importer. The agreed-upon contract price between the seller and the importer is the amount which was paid by the importer.

It must be noted that as of May 5, 1986, Customs no longer accepts documents, such as visaed invoices, which contain false information, or information inconsistent with that contained in other documents. The entry documentation in these circumstances will be returned to the importer for correction (See T.D. 86-56). However, in this case, entry and liquidation occurred prior to implementation of the T.D. Therefore, the T.D. has no effect on this decision.

It is our conclusion that the actual agreed-upon contract price between the importer and the seller represents the price actually paid or payable under transaction value. Please grant the protest in full.

Sincerely,

For (Signed) J. T. Roth

CLA-2 CO:R:CV:V
553723 EM

553723

District Director of Customs
U.S. Customs Service
120 S. Central Avenue, Rm. 408
St. Louis (Clayton), Missouri 63105

Dear Sir:

This ruling concerns your request for Internal Advice No. 19/84, on behalf of Chrysler Corporation, concerning the tariff status of certain automobile engine parts exported to Mexico for assembly into engines and returned to a foreign trade zone (FTZ) in the United States.

ISSUE:

The question raised concerns the applicability of item 807.00, Tariff Schedules of the United States (TSUS), to engines assembled in Mexico from component parts of United States origin and imported into a foreign trade zone for installation in finished automobiles.

FACTS:

Engine parts are exported to Mexico and assembled into automobile engines which are then imported into a Trade Zone as nonprivileged foreign merchandise and mounted in otherwise finished automobiles. The automobiles are then withdrawn from the zone and duty is paid on the engines at the prevailing lower rate applicable to automobiles rather than the higher rate for engines because of the claimed nonprivileged status of the imported engines. In addition, the importer claims an allowance for the assembled United States engines under item 807.00, TSUS.

Whether the engines were installed in finished automobiles or transferred into the Customs territory in the same condition as imported into the zone, the identity of the original imported engines was maintained in the inventory or production records of the zone.

D1

Assuming that the engines are installed in automobiles and transferred into the Customs territory at the lower rate of duty for automobiles, the district director's position is that the item 807.00 claim for the engines must have been made at the time of the first importation into the Customs jurisdiction of the United States or otherwise abandoned, since the exemption for item 807.00, TSUS, could only be preserved under a claim for privileged, and not nonprivileged, foreign status. The importer takes the position that articles having nonprivileged foreign status, upon being transferred from the zone for consumption, are subject to appraisement under the same classification that would apply if they were imported directly from a foreign country.

In this view, the engines would be eligible for item 807.00 tariff treatment when imported into the zone and would retain this tariff eligibility when withdrawn from the zone after having been installed in automobiles.

LAW AND ANALYSIS:

Section 146.1(c) of the Customs Regulations defines Customs territory as the territory of the United States in which the general tariff laws of the United States apply but which is not included in any zone. When work is performed on or material added to an imported article in a zone, which has effected a substantial transformation of the article into a new and different article of commerce, the article may no longer be considered an article of foreign origin when it is transferred to the Customs territory of the United States. In this respect, the United States becomes the country of origin of the automobiles upon their transfer from the zone for consumption.

[illegible] RELEASED TO THE PUBLIC

D2

557723

Generally, how merchandise is classified, appraised, and entered into the Customs territory depends on its zone status. An applicant for such status has several alternative choices for the status of goods. For example, the applicant may have his goods treated, for tariff purposes, in their condition either at the time the goods are admitted to the zone or at the time they are removed, whichever is more beneficial to him. He may even have his goods considered exported at the time of admission, allowing him to collect early drawback or timely close out a bond obligation. Or, he may preserve the non-dutiable status of domestic goods placed in the zone.

In this respect, the alternative choices for zone status create an exception to the general rule governing classification of entireties in accordance with General Headnote 10(h), TSUS. It is generally incorrect to constructively segregate imported merchandise for special treatment under different provisions of the tariff schedules. The further choice of an importer for classification of merchandise under item 807.00, TSUS, also creates an exception to the general rule governing entireties.

The choice for nonprivileged foreign merchandise, like the choice for item 807.00 tariff treatment, means that the merchandise is to be classified upon transfer from the zone to the Customs territory under the same provision of the tariff schedules that would apply if the merchandise was entered directly from a foreign country.

The imported engines were eligible for item 807.00 treatment upon entry into the zone but claims were not made therefor until the engines were installed in automobiles and subsequently transferred to the Customs territory. The identity of the engines was maintained separately on the

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D3

inventory and production records of the zone, thus predisposing the engines to later claims under item 807.00, TSUS. Accordingly, any claims arising under item 807.00, TSUS, in the given circumstances, are not lost or abandoned by failure to claim privileged foreign status for the engines. Since item 807.00, TSUS, remains a choice for imported goods or a viable option to be exercised, it can only be lost by failure to observe the rules set out in the governing headnotes of Subpart B, Schedule 8, TSUS. Any other conclusion would unduly set further limitations on the applicability of item 807.00, TSUS, beyond those expressed in the headnote provisions.

Further, whether goods entering a zone are classified in a privileged or nonprivileged status, depending upon the importer's election, this choice should have no effect on limiting substantive claims under item 807.00, TSUS, so long as the requirements of the tariff provision and applicable regulations have been met. Reliance upon zone category status cannot foreclose reliance upon item 807.00, TSUS, since both remain distinct choices upon entry of goods into a zone and subsequent entry into the Customs territory. Certainly, reliance upon item 807.00, TSUS, for imported goods would not foreclose reliance upon an importer's alternative choices for the zone status of imported merchandise. The two choices are not mutually exclusive. To this extent, therefore, any conclusions reached in C.S.D. 81-102 which appear to be at variance with those expressed herein, are modified.

CONCLUSION:

On the basis of the foregoing, allowances may be made under item 807.00, TSUS, for U.S.-made components that were assembled in Mexico into

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D4

553723

an engine which was later installed in automobiles for subsequent entry into the Customs territory of the United States, upon compliance with the regulations.

Sincerely,

Mann Road & Santa Maria
Post Office Box 3130
Laredo, Texas 78041

Dear Sir:

This ruling concerns the request for Internal Advice No. 59/85, on behalf of
concerning the assembly of disposable hospital gowns and patients' drapes in Mexico.

It is stated that hospital disposable gowns and patient drapes, which are used for surgery, are made from precut paper, cotton, and textile components that are exported to Mexico for the assembly process. During assembly of the gowns, trapezoidal-shaped sleeve panel components are first sewn to the gown body component and then sewn along a seam, described in the submission as a feld (fell) seam to form the sleeve components, and finally sewing cuff components onto the opposite sleeve ends.

The main component forming the patient drapes is a large rectangular piece of reinforced paper, to which are added side components, called wings, presumably to cover a patient's arms. During the assembly process of adding the side wing components, two slits are made by a machine blade in the main component, parallel with the drape length. Tracks of glue are applied or laid along the sides where the drape is slit and the added side components are manually laid over the glue tracks to form the added wing components.

On the basis of the samples and information submitted, allowances may be made under item 807.00, TSUS, for all those components forming the hospital drapes and gowns. Slitting the drapes and feld seaming the sleeve components after first sewing them into the gown body components and attaching the cuff components, are all considered operations that are minor in nature and necessary to facilitate the assembly process. Seaming the sleeve components is considered minor in nature on a cost comparison

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

D6

basis in addition to other factors and, therefore, is incidental to assembly. The cost of seaming the sleeves is minimal when compared with its cost as a component.

Sincerely,

(Signed) RUSSELL ARNOLD

[redacted]

Dear [redacted]

This is in further reference to your recent correspondence concerning the seizure of your son's vehicle.

This liability was incurred under the provisions of title 19, United States Code, section 1595a(a), because your son used the vehicle to aid in and facilitate the illegal importation of a quantity of hashish. The seizure of the vehicle is a civil sanction, independent of any criminal proceeding which may be associated with the case. The fact that your son was not found guilty of any criminal charges is not a bar to the civil action.

In your correspondence, you stated that the value of the vehicle should have been appraised at $2,100 rather than $1,800 as stated in our letter of June 13, 1977. Following seizure, vehicles are placed in the custody of the district director of Customs, and are appraised according to the provisions of title 19, United States Code, section 1606. At the time of seizure, Customs used the National Automobile Dealers Association, Official Used Car Guide for the region where the automobile was seized to determine the appraised domestic value. At that time, the value which Customs was using was the retail value, listed in the said guide. Today, vehicles are appraised at the wholesale value. Accordingly, we find that the vehicle was properly appraised under the appropriate provisions of law.

This matter was fully considered on its merits by the Under Secretary of the Treasury and you were furnished a decision on June 13, 1977, advising that your son was entitled to a check in the amount of $893.30. Your son has now received a check in the amount of $893.30 and we consider this matter to be closed.

Sincerely yours,

/s/ Harvey B. Fox

D8

ENF 4-02.7 R:E:M
608309 HDB

District Director of Customs
San Diego, California 92188

FEB 17 1978

Dear Sir:

Your letter of June 21, 1977, forwarded the penalty notices and seizure report for District Case No. 76-2504-01686. This case concerns the same events as those surrounding District Case No. 76-2504-01654 for which a decision dated June 10, 1977, was issued. While the petition submitted by counsel on behalf of [redacted], referred to Case No. 76-2504-01686, this case was not previously decided because the file was incompleted.

On March 26, 1976, merchandise domestically valued at $27,386.86 was seized pursuant to title 19, United States Code, section 1460 for violation of title 19, United States Code, section 1459, because petitioner failed to manifest the merchandise. A penalty in like amount was also assessed.

Petitioner does not deny this violation. It is claimed that a decision to close their Mexican plant led to strike. Work permits, which were good for one week, enabling San Diego based workers to close the plant, were issued. Petitioner, in essence, claims that the failure to manifest was the result of the necessary haste in this situation.

Merchandise domestically valued at $3,265 was seized because it was undervalued by petitioner, in violation of title 19, United States Code, section 1592. There is a loss of revenue of Petitioner claims that the statements with respect to value were made in haste, and that some of the merchandise has no value in that it is defective. Petitioner's claim that time was limited is substantiated by the record. The claim that the merchandise has no value is not substantiated.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

D9

As noted above, the present case arose out of the same set of facts for which a decision was already issued. The findings here are therefore the same. We find that petitioner failed to manifest some merchandise, in violation of title 19, United States Code, section 1459, and that this failure was the result of ordinary negligence. The forfeiture of the merchandise is remitted and the penalty is mitigated to $274.

We further find that some of the merchandise was undervalued, in violation of title 19, United States Code, section 1592, and that this violation was the result of gross negligence, in that petitioner acted with actual knowledge of or wanton disregard for the relevant facts and with indifference or disregard for its obligations under the statute. The forfeiture is remitted upon the payment of $714, provided withheld duties are also deposited.

Please notify petitioner of this decision and forward a copy of this letter with your notification.

Sincerely yours,

(Signed) Harvey B. Fox

Petition Submitted by [redacted], on Behalf of [redacted] and the [redacted], Requesting Relief From the Forfeiture of a 75-foot Shrimp Trawler [redacted], Domestically Valued at $175,000, Seized Under the Provisions of Title 19, United States Code, Section 1595a and Title 49, United States Code, Section 781 (District Case No. 79-1601-00027)

The liability was incurred when Customs patrol officers at 11:45 p.m. on April 24, 1979, spotted the vessel on the Ashepoo River in South Carolina. The vessel was forcibly brought under control by Customs boat crew. A large quantity of marihuana, 42,753 pounds, was discovered on board. The crew of eight Colombians was arrested. The vessel was seized under the provisions of title 19, United States Code, section 1595a and title 49, United States Code, section 781.

Interest in the case has been shown by the Department of State. Affidavits from the Acting Attorney General of the [redacted] and the President of the subsidiary corporation, [redacted], have been submitted in this case.

An analysis of petitioners' claims is given in detail in the attached memorandum.

The attached proposed decision remits the forfeiture without payment provided that certain equipment added to the vessel by the violators is removed. Pursuant to Departmental approval, the vessel has been released on these conditions.

Revision of the Three-Day Rule for
Issuing Seizure Notices

References: Fines, Penalties and Forfeitures Handbook (P&PM Handbook 3000-01), Pages 22 and 240 (Appendix G)

610896

1. PURPOSE

This Manual Supplement promulgates revised instructions concerning the time for issuing notices of seizure and information for claimants to seized property.

2. BACKGROUND

In October 1977 in an effort to avoid delays in the processing of seizure cases, the Customs Service established the policy that all notices of seizure and information for claimants to seized property were to be issued within three days (the so-called three-day rule). The guidelines are explicit and mandatory. The notice must be issued within three days.

Some few districts have been successful in meeting this requirement. Those which have have generally done so by having the seizing officer issue the notice at the time of the seizure. Other districts have been able to do so when the office issuing the notice (the fines, penalties and forfeitures office) receives the paperwork with information on the seizure in a timely fashion.

In most instances, however, for reasons of insufficient staffing, large numbers of seizures, and delays in receiving the supporting information concerning the seizure, the districts have not been able to issue the notices within the prescribed three days.

The rule was established to ensure that interested parties receive notice of the seizure promptly. Generally this purpose has been served. However, the inflexibility of the rule has caused Customs some administrative problems. It is apparent that the rule should be changed to add flexibility and to permit some discretion to the district director in the time he has to issue the notice.

3. ACTION

Notices of seizure and information for claimants shall be sent to all parties known to have an interest in the seized property within three working days. When circumstances make it impossible to issue the notice within this period of time, the notice shall be issued within a reasonable time thereafter.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

D13

4. EXPIRATION

This Manual Supplement will expire upon incorporation into the Fines, Penalties and Forfeitures Handbook, P&PM Handbook 3000-01, March 1979.

Dear Sir:

This is in reference to petitions filed by [redacted], requesting relief from numerous penalties incurred for failure to manifest marijuana in violation of the provisions of title 19, United States Code, section 1584. Penalties were also imposed against the various Masters and owners of vessels transporting the contraband. (District Case Nos. 81-4909-00039, 00061, 00073, 00078). Petitions were submitted by [redacted] on behalf of itself, the Masters and the owners.

The following is a list of the cases, the date of violation, the name of the vessel involved and the amount of each penalty:

Case No.	Date	Vessel	Penalty Amount
00039	Feb. 9, 1981	[redacted]	$98,800
00061	March 13, 1981	[redacted]	$1,895,200
00073	April 6, 1981	[redacted]	$148,800
00078	April 21, 1981	[redacted]	$207,200

Total aggregate liability is $2,350,000. Each penalty involves the failure to manifest a significant quantity of marijuana. All the marijuana was discovered in sealed containers.

Multiple penalties were assessed against [redacted] as vessel agent, [redacted], as vessel owner, and each Master. The provisions of section 1584 do not provide for assessment of multiple penalties for one violation. Any penalty incurred under said section may be imposed against the Master or the owner or the person responsible for the failure to manifest. Inasmuch as no evidence has been presented to implicate [redacted] or any individual Master, the penalties assessed against those parties are cancelled.

In each case, the evidence indicates that container seals were tampered with at the [redacted] facility at [redacted]. Petitioner admits that seals were changed, and insufficient documentation is presented which would explain the reason for such changes. Further, petitioner does not explain why control over the shipments was lost.

E1

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

Petitioner further states that it has taken numerous precautionary steps to avoid placement of marijuana on its vessels, but the problem is not one that is easily controlled. Evidence is presented to indicate that Jamaican port authorities were investigating the matter, and were attempting to assist [redacted] in the interdiction of marijuana.

However, presence of marijuana on [redacted] vessels is a recurring problem. The problem has not been confined to the San Juan district. The record reveals that [redacted], [redacted] agent at [redacted], has been assigned numerous seal numbers that cannot be accounted for. Further, a seal on a violative container in case no. 00073 was found to be one assigned to a [redacted] employee. Inasmuch as the seals were under the control of [redacted] agent, [redacted] must be held accountable for illegal substances found in the subject containers.

Petitioner [redacted] undoubtedly took some precautions to avoid the occurrence of this sort of violation. However, the subject violations occurred in a two and one-half month period. After the first violation, petitioner should have been alerted to the problem and satisfactory measures should have been taken. The frequency of the violations would indicate that the precautionary actions taken were inadequate. We find that petitioner was negligent in failing to detect and prevent the presence of marijuana on its vessels.

The penalties incurred in the subject cases are mitigated as follows: Case No. 00039, $988; Case No. 00051, $13,952; Case No. 00073, $1,468; and Case No. 00075, $2,072. Total aggregate liability is $23,500.

You may notify petitioners of this decision and include copies of this decision with those notifications.

Sincerely,

Donald W. Lewis
Director, Entry Procedures
and Penalties Division

[redacted]

6 MAY 1981

ENF 4-02.2 CO:R:E:C
652591 LR

District Director of Customs
Laredo, Texas 78040

Dear Sir:

This is in reference to your memorandum of February 18, 1981, concerning Laredo District Penalty Case No. 79-2304-50502. This case involves a claim for monetary penalty for $32,700.88, assessed against [redacted] for an alleged violation of title 19, United States Code, section 1592, as amended by Public Law 95-410 (Customs Procedural Reform and Simplification Act of 1978). [redacted] has submitted a petition for relief requesting that the penalty be cancelled claiming that it did not violate the statute.

The penalty notice alleges that during the period of June 5, 1973, through June 29, 1978, [redacted] entered certain merchandise assembled in Mexico into the commerce of the United States pursuant to false entry documents. The documents were false in that they erroneously indicated that various components were products of the United States and entitled to entry under item 807.00, Tariff Schedules of the United States (TSUS), when in fact the components were either foreign-made or could not be confirmed to be American-made because commingling had occurred prior to assembly. Under item 807.00, TSUS, articles assembled abroad in whole or in part of fabricated components which are products of the United States are in appropriate circumstances dutiable at the full value of the imported article less the cost or value of the products of the United States. As a result of the alleged violation, there is a reported potential loss of revenue of $16,350.44. The claim for $32,700.88, representing two times the loss of revenue, was based on the preliminary determination that the violation was attributable to negligence.

The subject merchandise consists of transmissions purchased and imported by [redacted] from the assembler, [redacted] The components which were falsely claimed to be products of the United States are included in these transmissions.

In the petition for relief, [redacted] admits that some of the components which were claimed to be products of the United States were not, and that other such components could not be shown to be products of the United States because they had been commingled with foreign-made components prior to assembly. Nonetheless, [redacted] claims that the penalty should be cancelled because the falsities are not attributable to any negligence on its part. To the contrary, [redacted] claims that it made reasonable efforts to ensure the accuracy of the entry documents.

652591

E3

[redacted] alleges that although the claims of duty-free entry of U.S. components were made on its behalf by [redacted], such information was solely within [redacted] knowledge. According to [redacted] it had no control over the sourcing or identification of the assembled parts because its relationship with [redacted] was arms-length and the latter company purchased its own component parts.

[redacted] further claims that at all times it did everything in its power to ensure that the components which were claimed to qualify for duty-free entry under item 807.00, TSUS, were actually of U.S. origin. In this regard, [redacted] notes that it was aware of the requirements for duty-free entry under this provision and that whenever it was requested by Laredo Customs to furnish information regarding the origin of parts, it did so. [redacted] also claims that it emphasized the nature and importance of complying with the requirements of item 807.00, TSUS, in its correspondence and discussions with [redacted] officials. According to [redacted] it had no reason to believe that [redacted] was handling the invoicing of claimed U.S. components incorrectly.

There is nothing in the file indicating that the transactions between [redacted] were other than arms-length. It also appears that [redacted] was in a better position to know and designate the appropriate components as of U.S. origin. We disagree with [redacted] allegation, however, that it did everything in its power to ensure the accuracy of the representations on the entry documents concerning the U.S. components.

The record reflects that during the penalty period, [redacted] wrote to [redacted] on three occasions concerning the subject importations. On July 16, 1974, it requested that [redacted] provide it with the name of the supplier and the country of origin of a particular part because Customs was questioning the claimed U.S. origin. On November 18, 1974, [redacted] requested [redacted] to provide an accurate list of U.S. components that are assembled into each transmission model. Finally, on September 22, 1975, it advised [redacted] to be sure that goods were accurately described because Customs agents were examining merchandise from Mexico where some of the component parts are of U.S. origin. Although importations continued until 1978, no further correspondence has been submitted.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

E4

658391

It is our view that these three letters and its responses to Laredo Customs do not demonstrate that [redacted] did everything possible to ensure the accuracy of the entry documents. There is no evidence that [redacted] advised [redacted] of the specific requirements of item 807.00, TSUS, or of the proper procedures to be followed (particularly as they relate to the commingling of goods). Although the last letter did emphasize the necessity of accurately characterizing the components, there is no evidence that [redacted] took any follow-up measures to ensure that [redacted] was complying with its instructions.

Section 10.24, Customs Regulations (19 CFR 10.24), pertains to the documentation required in connection with the entry of assembled articles claimed to be subject to the exemption under item 807.00, TSUS. Section 10.24(g) specifically states that subject to the civil and criminal sanctions provided by law for false or fraudulent entries, the importer has the ultimate responsibility for supplying all information needed by the Customs Service to process an entry, and for the completeness and truthfulness of such information.

In view of this responsibility, the fact that [redacted] is a knowledgeable and experienced importer, and the large number of importations involved we conclude that [redacted] was negligent in relying on the information provided by [redacted] concerning the U.S. components and in failing to take a more active role in ensuring the accuracy of the entry documents. In this regard, [redacted] should have advised [redacted] of the particular requirements for entry under item 807.00, TSUS, and monitored [redacted] adherence thereto (e.g. performing physical inspections of [redacted] operation; securing certificates of origin from the manufacturer of the component parts). We find that [redacted] failed to exercise reasonable care and competence to ensure that the statements made on the entry documents were accurate.

However, we believe that the circumstances of this case warrant mitigation. First, despite our finding that [redacted] as an experienced importer should have taken additional steps to ensure the accuracy of the entry documents, we recognize that [redacted] was in a better position to provide this information concerning the origin of the component parts and that it was the more culpable party. Second, [redacted] was extremely cooperative during the investigation. The record shows that it spent a considerable amount of time and effort in order to ascertain the true origin of the component parts and determine which were properly entitled to the benefits of item 807.00, TSUS. The

095294

ES

figures presented by Ford were ultimately used to determine the loss of revenue in this case. Third, considering the great number of entries involved in the case and the domestic value of the imported merchandise ($90,548,747), the loss of revenue is rather small.

Based on the above determinations, the monetary claim for $32,700.88 is mitigated to $20,438.05. Please notify [redacted] of this decision and provide a copy of this letter therewith.

Sincerely,

(Signed) Anthony L. Piazza

19 OCT 1983

ENF 4-02.2 CO:R:E:C
653382 LR

District Director of Custors
Houston, Texas 52790

Dear Sir:

Your office has forwarded two petitions submitted in connection with Houston District Case No. 83-5309-00154. The first was submitted by counsel on behalf of [redacted] requesting relief from a monetary penalty of $54,518, assessed against him for violation of title 19, United States Code, section 1592. The second was submitted by [redacted], requesting relief from a monetary penalty of $54,518, assessed against it for violating the same statute. The two penalty claims will be treated individually.

[redacted]

The liability was incurred because petitioner [redacted] attempted to enter a 1983 Porsche 930 Turbo automobile into the commerce of the United States by means of material and false documents. Although the DOT and EPA forms submitted with the entry stated that the vehicle was manufactured in compliance with import requirements and had the manufacturer's certification label affixed, no manufacturer's certification label was found on the vehicle. The manufacturer confirmed that the subject vehicle had not been manufactured to meet United States import specifications. The penalty notice further alleges that petitioner [redacted] filed an informal entry when in fact the vehicle was imported for resale or had previously been sold. The violations did not result in any loss of duties.

On February 14, 1983, the vehicle was seized pursuant to title 19, United States Code, section 1592(c)(3) in order to prevent the introduction of restricted merchandise into the Customs territory of the United States.

The claim for $54,518, representing the domestic value of the automobile, was based on your preliminary determination that the violation was attributable to fraud.

According to petitioner, he arranged for the purchase of the automobile from [redacted], [redacted] through [redacted] Although the imported vehicle is admittedly a European model which was not manufactured in accordance with United States import specifications, petitioner claims that the vehicle was modified to meet United States EPA and DOT requirements prior to shipment to the United States. The modifications were allegedly performed by the [redacted] from whom [redacted] purchased the automobile. For such modifications, petitioner indicates he paid [redacted] approximately $5,500.

E7

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

In support of the above allegations, the following documents have been submitted:

1. A copy of the letter of credit showing a transfer of $43,615.12 to [redacted] specifying thereon "U.S. certification" of the auto.

2. A declaration of [redacted] which states: we certify that we converted the Porsche 911 1/ Turbo Rg. Nr. [redacted] complete to a US-Model according to the [redacted]

3. The invoices of [redacted] listing the particular modifications performed.

4. An affidavit of [redacted] the Customhouse broker who handled the import transaction, which states in pertinent part: Further, [redacted] stated that he had paid for modifications to conform the car with U.S. safety and pollution regulations to be done in Germany. I noticed the price was extraordinarily high when he gave it to me. That is, his stated price of $43,615 compared to that of from $32,000 to $36,000 for similar automobiles in import transactions I had handled recently. It was from $7,000 to $11,000 higher. I seen (sic) very reasonable to me, therefore, that he had paid for the U.S. safety and pollution modifications as part of the purchase price (and still paid too much). Also, the information (telexes) we received from our German office to the effect that great difficulty has been experienced in getting the car to the airport because it had been "changed into U.S. regulation (U.S. made) and couldn't use German (leaded) gas," seemed to confirm that it was a U.S. conforming car.

The record further indicates that upon submission of the petition for relief, Import Specialist John Little and Special Agent James G. Kuester examined the seized automobile to determine whether the requisite modifications had in fact been performed. Both individuals are of the opinion that they had.

Based on a review of the above evidence, we conclude that petitioner did in fact arrange to have the subject vehicle brought into conformity with U.S. EPA and DOT requirements by a [redacted] before shipping and that he reasonably believed that the work had been performed.

Nonetheless, there is a violation in that petitioner falsely certified upon entry that the vehicle bears a certification label affixed by its original manufacturer. As petitioner readily admits, this statement is false and he knew it was false when he so certified. Although petitioner

1/A representative of a [redacted] sales force told Customs officials that the designations 911 Turbo and 930 Turbo are interchangeable terms and are both used for the same type and model Porsche (Report of Investigation, page 3).

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

E8

653382

attributes this falsity to a misunderstanding on the part of his broker, petitioner is ultimately responsible for all statements made upon entry. A lot of confusion would have been avoided if petitioner initially told Customs that the vehicle, although not manufactured for the U.S. market, was subsequently brought into compliance.2/ We find that petitioner was negligent in failing to use due care to ensure that the statements made on the EPA/DOT forms, upon which Customs was to rely, were accurate.

In addition to the false certifications, the penalty notice alleges that petitioner improperly filed an informal entry. A formal entry was allegedly required due to the fact that the vehicle was imported for resale or had previously been sold. Although petitioner states that he had originally intended to assist a U.S. buyer in the purchase of the subject auto prior to its importation (and had so informed the broker), approximately two weeks before importation, the would be buyer, [redacted] refused to follow through with his intended purchase. Petitioner then decided to import the auto for his own use. He said nothing to his broker about the change in circumstances because he was not aware it was relevant to the entry documentation. Petitioner further states that his broker prepared an informal entry because of her mistaken understanding of the requirements for formal vs. informal entries. She mistakenly believed that an informal entry was appropriate for a conforming vehicle. Petitioner asserts that he did not instruct his broker which type of entry to file.

Although information developed by the seizing inspectors originally indicated that the seized vehicle was to be sold by [redacted] to a [redacted] prior to its arrival in the United States, attached to the petition is a statement of [redacted] disclaiming any interest in the seized vehicle. During an interview with Customs officials on May 19, 1983, [redacted] confirmed that he originally arranged for the purchase of a Porsche 930 through petitioner, but subsequently advised that he was no longer interested in it. According to [redacted], he never paid petitioner any money for the car. There is no evidence in the record refuting [redacted] statements.

Petitioner's claim with regard to his broker's misunderstanding concerning the filing of an informal entry is substantiated by the affidavit of [redacted] attached to the petition.

Upon review of the record, we believe that a penalty for the filing of an informal entry is inappropriate. First, the mere use of an informal entry rather than a formal entry does not in our view constitute either a false statement or a material omission within the meaning of title 19, United States Code, section 1592(a)(1)(A). Second, the evidence does not establish that the importation was commercial as the penalty notice alleges.

However, in light of our finding that petitioner violated the provisions of title 19, United States Code, section 1592 by negligently certifying that the automobile was covered by a manufacturer's certification label, a penalty

2/Customs investigation commenced upon learning from [redacted] that model 930 Turbo automobiles had not been manufactured by [redacted] to meet U.S. specifications since 1979.

E9

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

653382

is warranted. Because no loss of revenue occurred and the violation is not considered to seriously affect enforcement, the penalty claim is mitigated to $250 and the seizure is remitted provided petitioner files a formal entry for the car, posts an EPA/DOT compliance bond, and pays the seizure costs. In lieu of posting the compliance bond, petitioner may export the vehicle under Customs supervision.

[redacted]

A separate claim for $54,518 was assessed against [redacted] for allegedly attempting to enter [redacted] 930 Porsche into the United States in a manner contrary to law. According to the penalty notice, [redacted] presented an informal entry for the release of the vehicle with full knowledge that the shipment was commercial in nature and that a formal entry was required by the Customs Regulations. The notice further states that the violation was the result of fraud.

Petitioner [redacted] claims that there was no attempt to fraudulently circumvent the law by filing an informal entry. The reason for filing an informal entry was its belief that this was the proper procedure for a conforming vehicle. Petitioner claims that it was unaware that a formal entry was required if the vehicle was pre-sold. Petitioner further points to the fact that it was extremely cooperative with Customs during the investigation, making its files readily available for inspection.

We do not believe that assessment of a penalty against [redacted] under title 19, United States Code, section 1592 is appropriate in the circumstance of this case. First, as indicated above, the mere use of an informal entry rather than a formal entry does not constitute either a false document or material omission within the meaning of title 19, United States Code, section 1592(a)(1)(A). Second, absent evidence of bad faith, a broker's misunderstanding concerning the proper type of entry to be filed does not warrant the imposition of a penalty. Finally, as indicated above, the evidence does not establish that this was a commercial importation as stated in the penalty notice. Accordingly, the $54,418 penalty claim against [redacted] is cancelled.

Please notify petitioners of these decisions, enclosing a copy of this letter therewith.

Sincerely,

[redacted]

/S/ DWL

653570

18 MAY 1984

ENF 4-02.2 CO:R:E:C
653570 BLS

District Director of Customs
Chicago, Illinois 60607

Re: Chicago Seizure Cases 83-3901-00017, 83-3901-00018 and 83-3901-00019; [redacted]

Dear Sir:

This is in reference to the memorandum from the Acting District Director dated April 12, 1984, regarding the above-captioned matter. Three Mercedes Benz automobiles were seized under title 19, United States Code, section 1592 for the reason that false statements were made in connection with DOT and EPA certifications. The seizures were made to prevent the introduction of restricted merchandise into the United States.

While the submitted petition deals with all three vehicles, your office requests that we issue a decision only with respect to two of the vehicles (Nos. 00017 and 00018), since the owner of the third vehicle had not petitioned as of the date of the Acting District Director's letter. The remaining two vehicles are reported to have a domestic value of $40,000 and $50,000.

CASE NO. 83-3901-00017

The record shows that this vehicle had been modified in conformity with EPA and DOT standards prior to the date of seizure (May 13, 1982). Thus, appropriate certifications were obtained from those agencies on April 28 and April 29, 1982, releasing [redacted] from all obligations under its bond. Therefore, the seizure was improper as there was no violation with respect to this vehicle.

CASE NO. 83-3901-00018

In general, pursuant to title 19, United States Code, section 1592(b)(1), if the appropriate Customs officer has reasonable cause to believe that a violation has occurred, and that further proceedings are warranted, he shall issue a pre-penalty notice, as described therein, with opportunity for representations by the person concerned. A penalty claim shall be subsequently issued if the officer determines that a violation has occurred. (Section 1592(b)(2).) A notice of seizure must also be issued if merchandise has been seized pursuant to section 1592(c)(5).

E11

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

65357D

In the instant case, only a seizure notice was issued, and therefore [redacted] has not been accorded the rights to the procedures set forth under the statutory scheme. Under the circumstances, you should expeditiously issue a pre-penalty notice pursuant to section 1592(b)(1)(A). Since you have recommended a monetary penalty of $5,000, based upon a finding of negligence with mitigating factors, it appears that the proposed maximum monetary penalty should reflect that amount. The submitted response to the seizure notice, may, at [redacted] option, be used as the response to the pre-penalty notice, and to the penalty notice, if so issued.

The same procedures are applicable with respect to Case No. 83-3901-00019, if only a seizure notice was also issued with respect to that vehicle.

Sincerely,

/S/ Edward T. Rosse

18 MAY 1984

ENF 4-02.2 CO:R:E:C
653582 SLG

[redacted]

Dear [redacted]

This is in response to your letter dated May 10, 1984, on behalf of [redacted] with regard to Baltimore District Case No. 83-1303-00017, which involves a monetary penalty in the amount of $27,500, and a seizure of one 1982 300 D Mercedes Benz vehicle. Please be advised that a decision by Customs Headquarters on your client's original petition, was forwarded to the District Director, Baltimore by letter dated May 3, 1984.

In case you have not received a copy of the above decision from the District Director, Baltimore, please be further advised that the penalty and seizure were remitted upon payment by your client of the amount of $14,850, plus storage charges. Your client may obtain release of the above vehicle at any time upon payment of the mitigated penalty.

In the Headquarters decision, you will note from the discussion concerning the seized vehicle's compliance with Environmental Protection Agency (EPA) standards, that the alleged false statement was not simply that the vehicle complied with the standards, but that the vehicle already was covered by a certificate of conformity issued by EPA. It was impossible for the vehicle to have been covered by an EPA certificate of conformity if it had not yet been tested. Hence, it is irrelevant to the false statements made by your client that the vehicle involved in the [redacted] case (Baltimore District Case No.83-1303-00023) passed the testing for compliance with EPA standards after it was released from Customs.

In addition to fact that your client now may obtain release of the vehicle upon payment of the mitigated penalty of $14,850, your client always could have elected not to proceed with an administrative disposition of the seizure of his vehicle by requesting a prompt referral of the matter to the Department of Justice for institution of judicial forfeiture proceedings. Your client, however, through counsel, waived immediate referral of the matter to the Department of Justice for institution of judicial forfeiture proceedings with specific request for a review of his petition in an administrative proceeding. In

E13

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

653582

submitting the above waiver your client expressed an understanding that a request for referral of the matter for judicial forfeiture still could be made at any time thereafter. This waiver was submitted by your client, through counsel, as recently as October 5, 1983 (copy enclosed). Consequently, we do not believe that the Customs Service has violated [redacted] rights to due process of law by proceeding with a requested administrative disposition of the seizure, rather than immediate forfeiture proceedings.

If after reviewing this letter and the May 3, 1984 decision, [redacted] still wishes to make additional claims for relief from the penalty and seizure, you may file on its behalf, a supplemental petition for relief pursuant to title 19, Code of Federal Regulations, section 171.33.

E14

05 JUN 1984

ENF 4-02.2 CO:R:E:C
653586 SLG

Area Director of Customs
Newark, New Jersey 07114

Dear Sir:

This is in reference to an informal inquiry received by our office from Inspector Robert E. Segall of your Fines, Penalties and Forfeiture Office, concerning possible violations of title 19, United States Code, section 1592. A report of investigation on [redacted], [redacted] dated January 25, 1984 (NK08FH32700), was forwarded for our review.

Inspector Segall has submitted that [redacted] actions described in the above report of investigation primarily present a classification issue, one not properly the basis for establishing a penalty claim under title 19, United States Code, section 1592. Based upon our review of the report of investigation (ROI) and attached exhibits forwarded therewith, we essentially agree with Inspector Segall's conclusion that the actions alleged to represent a violation of section 1592, presents a case of an incorrect classsification instead of a misdescription of the goods.

Under cover of 22 consumption entries, [redacted] is reported to have entered typewriters, duty-free, under item 676.05, Tariff Schedules of the United States (TSUS) as "electronic" typewriters, when in fact they were properly classifiable under item 676.07 (TSUS) as automatic typewriters, dutiable at the rate of 4.5 percent ad valorem. In addition, [redacted] allegedly failed to declare the auxiliary memory units on one of the models (51) imported. As a consequence of the incorrect classification there is a total loss of duties in the amount of $152,808.

Our review of the company brochures attached as Exhibit 3 to the report of investigation, reveals that the typewriters were described therein as "electronic". There, however, is no reported evidence that establishes that prior to the date of the Notice of Action (August 16,1982), [redacted] was aware that typewriters were classifiable under item 676.07 (TSUS), which itself merely refers to typewriters "other" than "nonautomatic with hand-operated keyboard". More important, in our view, is the fact that it appears that the commercial invoices presented with the shipments (three copies attached as Exhibit 5 to ROI) truthfully described the products by trade name, model and serial numbers, eg., [redacted] Top Tronic Office Typewriters, 9296, Madeleine 51/8K".

653586

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

In these circumstances, we believe that Customs cannot claim to have reasonably relied upon the descriptions in the commercial invoices in accepting, as correct, the importer's tariff classification of the typewriters. A request for information issued after the first or second entries, which were filed within two months of one another, most probably would have resulted in Customs determining the correct classification prior to suffering any unrecoverable loss of duties. Moreover, even without a response to a request for information, Customs could have ascertained from the invoices for some of the typewriters that they consisted of more than ordinary electric typewriters. As previously stated, for example, some of the invoices reflected the description of the name, "Madeleine 51/8K". We have been advised that the description, "8K", designates some type of memory capacity, which itself should have alerted Customs to the fact that they consisted of more than plain electric typewriters. Finally, the fact that the issue of the classification of typewriters under either item 676.05(TSUS) or item 676.07(TSUS), represents a legal classification determination, is demonstrated by the ORR Ruling 069065 attached as Exhibit 4 to the ROI, where Headquarters ruled on whether the Canon AP 400 and AP 500 electronic typewriters were classifiable under either item 676.07 (TSUS) or under item 676.05(TSUS). In that case, each model was ruled to be classifiable under a different tariff item because of the features asociated therewith.

Generally, unless 1) there is evidence of the importers actual knowledge of the correct tariff classification of the imported goods or 2) the description of the merchandise in the invoices is misleading although not completely false, Headquarters does not support the issuance of a section 1592 penalty claim based solely upon misclassification by the importer. This is in accordance with Customs longstanding position that while it is the importer's duty to describe merchandise accurately on the invoices presented to Customs, it is Customs duty to classify the imported merchandise.

With respect to the auxiliary memory units to the [redacted] Model 51 typewriters alleged to have not been declared, on one of the commercial invoices for this model, the following description appears after the listing of the Model 51 typewriters included in the shipment:

> "Options: 225 Units HX-10/040, Micro Floppy Disk Nos:....[list of numbers]."

If this was noted on all of the invoices for the Model 51 typewriters, then although no separate prices seemed to have been stated therefor, it hardly can be alleged that the auxiliary units on the Models 51 were "not declared".

653556

F2

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

If, however, the above description was not presented on the invoices for all of the Model 51 typewriters imported, a material omission under section 1592 can be alleged for either the failure to file an entry for these goods in accordance with section 1484, or the failure to include these items in the description of the Model 51 typewriters in accordance with the requirement under section 1481(a)(3), to provide a "detailed description of the merchandise, including the name by which each item is known,....", eg., "Micro Floppy Disk". In this situation, the loss of revenue attributable to the auxiliary memory units could be recovered under section 1592(d). Section 1497, however, which is limited to failures to declare articles on baggage declarations, would not apply to these entries.

In sum, our views on this matter based on the facts submitted are as follows:

1) With the exception of the single entry filed by [redacted] after the Notice of Action was issued on August 16, 1982, we do not recommend that a penalty claim under section 1592 be issued for the incorrect tariff classification entered by Hermes for the subject typewriters.

2) We do not believe that any actual loss of revenue on the first 21 entries could be recovered under section 1592(d), inasmuch as no violation of section 1592 was committed.

3) It is not recommended that a penalty be issued under section 1592 for the auxiliary units on the basis of a material omission, unless the invoices for the remaining entries for the auxiliary units to the Model 51 typewriters do not present a description similar to that shown on the sample invoice for Model 51, attached to the ROI.

Sincerely,

/S/ Donald W. Lewis

ENF-4-02.2 CO:R:E:C
653594 CR

District Director of Customs
Dallas, Forth Worth, Texas 75261

Dear Sir:

This is in response to your memorandum dated June 1, 1984, forwarding a petition dated October 6, 1983, submitted by [redacted] on behalf of [redacted] The petition seeks relief from a seizure and claim for a monetary penalty in the amount of $52,159 assessed against [redacted] for a violation of title 19, United States Code, section 1592, in your Dallas/Ft. Worth District Case No. 83-5501-00146.

A petition has also been filed by [redacted] on behalf of [redacted] claiming that the bank is the lienholder on the vehicle which is the merchandise the subject of this case, and holds a security interest in the vehicle. [redacted] requests the vehicle be released either to [redacted] or the bank so that the vehicle may be sold and funds applied to the debt of $65,000 owed by [redacted] to the bank. Documentation furnished by the bank substantiates its interest.

The penalty claim arose when [redacted] introduced into the commerce of the United States a 1983 Porsch 930, [redacted], on Informal Entry No. 23081882 on December 8, 1982, by means of false and material entry documents. The entry documents were false in that the vehicle was misdescribed as a Porsche 911 SC, and the declarations were false in that they stated that the vehicle conformed to EPA and DOT specifications when in fact it did not.

As we understand the facts, on December 8, 1982, [redacted] a friend of [redacted] entered the vehicle as importer of record on behalf of [redacted] to take advantage of a promotion offered by [redacted] A ticket holder on [redacted] would be allowed to import a vehicle at approximately 30 percent of the actual shipping cost. Because [redacted] was already importing another car for his own use pursuant to this promotion, [redacted] apparently was promised a free trip to Germany by [redacted] In return, [redacted] agreed to use his plane ticket to take advantage of the promotion with the understanding that the vehicle [redacted] imported belonged to [redacted] and was for [redacted] personal use.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

F4

653594

[redacted] informed Customs agents that [redacted] had all of the documents in Munich, West Germany completed in [redacted] name, and that [redacted] supplied the advice on how the EPA/DOT forms were to be completed by the importer. [redacted] stated that he did not complete the forms, but did sign then. The vehicle was released at the Dallas/Ft. Worth Airport after [redacted] signed the EPA/DOT compliance forms.

On August 11, 1983, Customs agents seized [redacted] 1983 Porsche 930 from the establishment of [redacted], where allegedly, it was undergoing EPA/DOT conversion.

Counsel for [redacted] presents a "compromise offer", dated October 6, 1983, which we do not consider to be a formal compromise of the government's claims pursuant to 19 U.S.C. 1617. Rather, we view this submission as a petition seeking relief from a seizure and claim for a monetary penalty pursuant to 19 U.S.C. 1618.

Counsel for petitioner recites generally the facts of this case and offers as evidence a [redacted] showing there is a lien on the vehicle held by [redacted] Counsel also submits a letter dated August 31, 1983, from [redacted] confirming that the vehicle was seized and estimating that the conversion work could be completed in approximately 10 days. Counsel also submits a letter dated September 1, 1983, from [redacted] who advises that the conversion work can be completed in approximately 10-15 working days.

Counsel for petitioner states, that petitioner was dilatory in having the vehicle in question converted to EPA/DOT standards, and indicates that part of the delay occurred when counsel, upon learning that there was an on-going investigation of petitioner, advised petitioner to take no action. After some period of delay, petitioner decided to have the EPA/DOT conversion work completed at [redacted], and the vehicle was seized there.

Counsel for petitioner suggests that in order to settle this matter, petitioner will agree to post a bond or letter of credit and agree to have the car completely converted to meet EPA/DOT standards within 60 days of the car being released. By letter dated November 28, 1983, counsel for petitioner advises that petitioner has obtained an Immediate Delivery and Consumption Entry Bond to expedite this matter.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

FS

653594

We consider the suggestions of counsel for petitioner for resolving this matter to be unsatisfactory. The petition fails to address the seriousness of this penalty claim.

The following documentary evidence filed with Informal Entry No. 23081882 on behalf of petitioner were false and material:

1. A commercial invoice describing the vehicle as a Porsche 911SC (a conforming vehicle made for the U.S. market as well as the German market) instead of a Porsche 930 Turbo (a non-conforming vehicle not made for the U.S. market);

2. An EPA Form 3520-1 declaring that the falsely described Porsche 911SC conformed to EPA clean air standards; and

3. A DOT Form 7 declaring that the falsely described Porsche 911SC conformed to U.S. safety standards.

We conclude that by introducing the Porsche 930 into the commerce of the United States by means of these material and false entry documents, petitioner, [redacted] violated title 19, United States Code, section 1592.

Evidence in the file clearly indicates that petitioner, [redacted] has extensive experience in importing foreign vehicles into the United States, and knows well the customs laws and regulations, and requirements necessary to conform a vehicle to EPA and DOT specifications. [redacted] had actual knowledge of the proper method of completing the entry documents, especially the DOT and EPA forms. [redacted] simply used [redacted] to commit the violation. [redacted] had actual knowledge that the vehicle did not conform to EPA and DOT requirements at the time of entry because he misdescribed the vehicle as another model which conforms to the U.S. market. [redacted] subsequently took the vehicle to [redacted] so that the conforming changes could be made.

We conclude that the weight of the evidence establishes in a clear and convincing manner that petitioner acted in a fraudulent manner, deliberately with intent to violate the laws regarding the admission of a nonconforming vehicle into the United States.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC ____

F6

For purposes of mitigation, we consider this to be a noncommercial importation. Petitioner offers no factors which can be taken into consideration to mitigate the penalty claim.

In light of the above discussion concerning the violation of title 19, United States Code, section 1592, the level of culpability of fraud, and our national guidelines applicable to this violation, we conclude the penalty claim be mitigated to $36,242. The vehicle is to be released only when this mitigated penalty amount is paid, and a bond is posted to ensure compliance with EPA and DOT requirements, and storage charges by Customs are paid.

Please notify petitioner, [redacted] that he has 30 days to comply with the above conditions. If [redacted] does comply, he must also execute a Hold Harmless Agreement with Customs prior to release of the vehicle. It will be necessary that you provide the bank advance notice of the date and time of release of the vehicle to [redacted]

[redacted] has a valid security interest in the vehicle. Therefore, if [redacted] fails to comply, please notify the Bank that it has 30 days to comply with the above conditions. If the bank does comply, it also must execute a Hold Harmless Agreement with Customs prior to release of the vehicle. It will be necessary that you provide similar notice to [redacted] of the release of the vehicle to the bank.

In the event the neither party complies with the decision, the matter should be referred to the Department of Justice for appropriate action.

Please notify both petitioners of this decision and enclose a copy of this letter with your notifications.

Sincerely,

(Signed) Edward T. Rosse

[redacted]

Dear [redacted]

This is in response to your letter dated July 9, 1984, whereby you filed a supplemental petition on behalf of [redacted] ("petitioner"). Petitioner seeks total remission of the penalty assessed in the amount of $27,500, and the seizure of one 1982 300 D Mercedes Benz vehicle, incurred for violation of title 19, United States Code, section 1592 (Baltimore District Case No. 83-1303-00017).

The above penalty was assessed and seizure was made because petitioner, allegedly as a result of fraud, attempted to enter the above-described vehicle into the commerce of the United States on November 29, 1982, by means of the material false statements that the vehicle complied with all Department of Transportation (DOT) safety standards and that it was covered by a certification of conformity issued by the Environmental Protection Agency (EPA). Also allegedly resulting from fraud, petitioner falsely declared that the vehicle bore a DOT certification label affixed by its original manufacturer and that it bore an EPA certification label or tag.

By decision dated May 3, 1984, the foregoing penalty and seizure were remitted upon payment of the amount of $14,850, plus storage charges, with the proviso that the corrected DOT and EPA forms be completed if the vehicle is imported into the United States. The foregoing decison was based upon the following findings and facts and conclusions of law: 1) The statements made regarding the vehicle's compliance with the requirements of the Department of Transportation (DOT) and Environmental Protection Agency (EPA) were false; 2) The false statements were material in that they had the potential to alter the status of admission of the vehicle into the United States; and 3) The material false statements were made as a result of fraud in that petitioner acted with intent to import the vehicle into the United States without complying with EPA and DOT emission and safety standards.

While not addressing the merits of the fraudulent violation of section 1592 committed by petitioner, the sole contention on supplemental is that by not having referred the instant seizure

F8

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

for institution of judicial forfeiture proceedings, Customs has deprived petitioner of property without Fifth Amendment rights to due process of law.

We disagree with this contention and accordingly, deny your supplemental petition for further relief from the penalty and seizure. Moreover, we believe that support for our position that there was no unreasonable delay by Customs in the instant penalty/seizure case can be found in the recent decision by the Supreme Court in United States v. Eight Thousand Eight Hundred and Fifty Dollars, ___U.S.___, 103 S.Ct. 2005 (1983).

In United States v. Eight Thousand Eight Hundred and Fifty Dollars, supra, the Supreme Court held on facts presented, that the 18-month delay by the Government in filing a civil proceeding for forfeiture of seized currency, did not violate the claimant's right to due process of law. In noting that "unlike the situation where due process requires a prior hearing, there is no obvious bright line dictating when a post-seizure hearing must occur", the Supreme Court found that the following four factors should be weighed in determining whether the Government's delay was reasonable: 1) the length of the delay, 2) the reason for the delay [which can include a pending administrative petition], 3) the claimant's assertion of his right to a judicial hearing, and finally, 4) prejudice to the claimant caused by the delay, i.e., whether the delay affected the claimant's "ability to defend the propriety of the forfeiture on the merits." We believe that based upon the foregoing factors Customs delay was reasonable.

As we advised in our letter to you dated May 18, 1984, your client as late as October 5, 1983, waived immediate referral of this seizure for judicial forfeiture action, with the express understanding that the waiver could be withdrawn at any time. Had this waiver not been granted, Customs could have referred the matter to judicial forfeiture at least by that date. Moreover, although a petition for relief had been filed and was then pending, at no time prior to executing the waiver on October 5, 1984, nor at any time prior to your letter to us dated May 10, 1984 [after the date of the decision by Headquarters on this matter], did petitioner request that the seizure be referred for immediate judicial forfeiture proceedings. As was the case in Eight Thousand Eight Hundred and Fifty Dollars, supra, during the period that elapsed since the date of the seizure, petitioner made inquiry regarding the results of its petition for remission, rather than a request for referral of the matter to the Department of Justice for judicial forfeiture proceedings.

65 3614

F9

653614

In connection with the claim of an unreasonable delay by Customs, you submit that the continued seizure of the vehicle has prevented petitioner from showing that the modification work performed on the vehicle in Germany, in fact, did meet the EPA specifications. Apparently, there still is a misunderstanding of the nature of the violation committed by petitioner.

In our letter to you dated May 18, 1984, we explained that the fact that the vehicle ultimately complies with EPA standards after testing for such has been performed is no defense to the violation committed by petitioner. Petitioner's violation relating to the vehicle's compliance with EPA standards consisted of the false claims that upon importation, the vehicle already was covered by a certificate of conformity issued by EPA. This false claim had the potential of circumventing the Customs procedures for ensuring that the vehicle did comply with EPA standards, in that when such certification in fact has been granted by EPA before the vehicle is imported, there is no requirement to have the vehicle tested after importation. Petitioner has not claimed that the delay has prevented it from contesting the above. Hence, in our view, the continued seizure of the vehicle has not "hampered [petitioner] in presenting a defense on the merits". See Eight Thousand Eight Hundred and Fifty Dollars, supra.

In addition to the foregoing, petitioner was advised by seizure notice dated December 20, 1982, of the fact that it could have obtained immediate release of the vehicle upon payment of the penalty amount provided in the prepenalty notice. As was the Customs practice of which petitioner's then counsel most probably was aware, a letter of credit drawn in the amount of the penalty for an appropriate period, could have been deposited in lieu of actual cash. Instead, petitioner chose to await the conclusion of the administrative proceeding rather than deposit any amount to obtain release of the vehicle.

In accordance with the foregoing determinations, the supplemental petition is denied. We have advised the District Director to refer the instant case to the Department of

20 NOV 1984

ENF 4-02.2 CO:R:E:C
653687 SLG

653687

District Director of Customs
Houston, Texas 52790

Dear Sir:

This is in reply to your referral of the case involving a penalty assessed in the amount of $35,000, against [redacted] and the seizure of one 1980 Mercedes Benz vehicle for violation of title 19, United States Code, section 1592 (Houston District Case No. 84-5301-00086). Although no petition for relief from the penalty claim actually has been filed, you have advised counsel for [redacted] ("petitioner") that his prepenalty response would be treated as a formal petition for mitigation upon Customs receipt of a power of attorney and a waiver of the right to prompt referral of the seizure for judicial enforcement. Both an executed waiver form and a power of attorney subsequently were supplied by petitioner's counsel.

The penalty was assessed and the seizure was made because on May 9, 1984, petitioner, allegedly as a result of fraud, attempted to enter the 1980 Mercedes Benz vehicle duty free under item 812.30, Tariff Schedules of the United States (TSUS) by means of the false claims that this represented his first importation of a vehicle into the United States and that the value thereof was $8,000. It subsequently was discovered, however, that within the previous year, petitioner had filed two entries covering vehicles with the same claim that they were intended for his personal use. Upon being confronted with the foregoing, petitioner reportedly admitted to entering the two vehicles previously and to selling those vehicles. Petitioner also reportedly admitted at this time that the true value of the vehicle in this case was $17,000, instead of $8,000, as declared. Although not specified in the seizure notice, in view of petitioner's status as a nonresident with no place of business in the United States indicated on the entry documents, seizure of the vehicle was necessary to protect the revenue.

We, however, are unable to agree that there is a potential loss of revenue. Notwithstanding the false statements as to the value of the vehicle and the previous importations, there is insufficient evidence that petitioner was not importing the subject vehicle for his personal use. Petitioner, whom the records reflect was a citizen of Holland visiting the United States at the time of the violations, still would have been entitled to enter the subject vehicle under item 812.30 (TSUS)

F12

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

if this importation was being made for his personal use. Thus, in order for there to exist a potential loss of revenue in this case, there must be evidence that the present attempted importation did not qualify for entry under item 812.30 (TSUS). We find no such evidence in the facts presented.

With respect to the merits of the penalty claim, petitioner, through counsel, essentially claims as follows: 1) The false statements resulted from a misunderstanding of the language; petitioner misunderstood the term "imported" when he disclaimed having made any previous importations of vehicles; and the declared value of $8,000, represented the average price for the subject vehicle in Europe without the extras, which he declared in accordance with European practice. 2) Even assuming arguendo that the false statements were intentionally misleading, they were not "material" under section 1592, since the previous importations by petitioner would not have precluded his entry of the subject vehicle under item 812.30 (TSUS) and since, regardless of the value of the vehicle, the entry was duty-free under that tariff item.

We find that both of the false statements in this case were material under section 1592. Although there may not have existed sufficient facts to deny petitioner's claim to right of entry under item 812.30 (TSUS), had the true facts regarding petitioners previous importations been known to Customs at the time of the subject entry, Customs most probably would have required in connection with the subject entry, the filing of a formal entry and a bond to ensure petitioner's compliance with the conditions applicable to duty-free entries under item 812.30 (TSUS) as well as with the terms for exemption from the EPA and DOT requirements stated on the forms executed by petitioner. Moreover, the falsely declared value of the vehicle was material because of its potential to affect the appraisement of the vehicle. If the discovery of facts prior to importation had revealed that the vehicle was not intended for petitioner's personal use (eg., the discovery of an intended sales transaction), the falsely declared value could have been used as the basis of appraisement. In addition, even if the vehicle had been released under item 812.30 (TSUS), and subsequently sold within one-year, "the duty which would have been payable at the time of entry" would be required to be paid, and the falsely declared value most probably would have been used for determining the amount of duties in such instance. (See Part 2, Subpart A, Headnote to Schedule 8 (TSUS).)

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

653687

F13

We also find no merit in petitioner's claims that the false statements regarding his previous importations, resulted from his misunderstanding of the term "imported". Petitioner repeatedly denied to Customs Officials any previous importations into the United States, although two importations had been made by him within the last year. It stands to reason that upon such repeated inquiry by Customs, petitioner himself, should have inquired as to what was meant by the questions regarding previous "importations" by him, before stating categorically to Customs orally and on the C.F. 3299 executed by him, that this was the first time that he imported a vehicle into the United States. Thus, we find that the false statement that he never before had imported vehicles into the United States, was made deliberately by petitioner with intent to violate the laws requiring that the true facts be provided to Customs.

With respect to the falsely declared value of $8,000, the question on the C.F. 3299, pertaining to such did not precisely request that the price paid for the vehicle be declared, but rather requested declaration of the "value or or costs of repairs." Although a value other than the price paid would be considered a false value, it is not clear that such false value was deliberately made under the circumstances in which this information was solicited on the C.F. 3299. Moreover, the circumstances of petitioner's admission to undervaluing the subject vehicle is not established sufficiently in the record for purposes of sustaining a finding that the false value resulted from either fraud or gross negligence. Hence, we find that the falsely declared value in this case resulted from petitioner's failure to exercise due care to ascertain his obligations under the laws with respect to reporting the value of the subject vehicle.

In accordance with the foregoing determinations, and the national guidelines applicable to noncommercial violations of section 1592, by arriving travellers, the instant penalty claim and seizure are remitted upon payment of the amount of $8,500. In light of petitioner's past importations of vehicles for personal use, which he reportedly admitted were sold, a formal entry and a bond should be required in the event petitioner elects to proceed with the attempted importation of the subject vehicle. An executed bond in the proper amount will provide some protection against any failure by petitioner to comply with the requirements for duty-free treatment under item 812.30 (TSUS) as well as the requirement stated on the EPA and DOT form, that the vehicle would be exported within a period of one year from the date of entry.

G1

21 DEC 1984

653760

ENF 4-02.2 CO:R:E:C
653760 RJP

Area Director of Customs
Newark, New Jersey 07114

Dear Sir:

The petition submitted by counsel on behalf of [redacted] (petitioner), requesting relief from a claim for monetary penalty of $41,701.80, assessed under title 19, United States Code, section 1592, has been considered (Newark Area Case No. 84-4601-00444.

The liability was incurred because petitioner entered or caused to be entered six Mercedes Benz automobiles into the commerce of the United States, by means of material false statements. On EPA/DOT forms accompanying Immediate Delivery Entries filed with Customs, the automobiles were described as being in conformity with EPA/DOT standards, when in fact they were not. Because the vehicles were non-conforming, and therefore considered prohibited or restricted merchandise, Customs seized the subject automobiles, and assessed the instant claim for monetary penalty. Subsequently, the cars were brought into compliance with EPA/DOT standards and were released from Customs custody. (It should be noted that because the appropriate duties were paid with respect to the subject automobiles, the penalty action before us is a non-revenue loss case.)

Petitioner maintains that the individuals involved in the purchase of the automobiles contracted for and paid a foreign concern to perform the necessary EPA/DOT conversion work. Further, petitioner states that the Customhouse broker responsible for handling the import transaction was instructed to enter the vehicles as non-conforming, inasmuch as the U.S. purchasers had not had an opportunity to view the automobiles to determine whether or not the conversion work had been adequately performed. Petitioner goes on to state that the broker entered the vehicles as conforming with EPA/DOT standards without the consent or knowledge of the U.S. purchasers. Consequently, petitioner contends that neither he nor any of the other U.S. purchasers intended or knew that the vehicles in question were entered as conforming to Government standards.

The record in this case establishes that the subject automobiles were presented for entry accompanied by documentation which indicated that the conversion work had been performed in West Germany, when in fact, only superficial work had been performed on the vehicles (i.e., insufficient to bring them into compliance with Government standards). Moreover, the investigative report contains evidence which contradicts petitioner's contention

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G2

653760

that the broker had been instructed to enter the vehicles as non-conforming. Also, the file indicates that petitioner arranged the purchase and importation of the subject automobiles, and that there was an attempt to make it appear that the vehicles had been sold while in transit to the United States rather than after the vehicles had been landed. The evidence of record contains two bills of sale for each vehicle. The first bill of sale for each car is dated June 10, 1984 (prior to the vehicle's arrival at the port of entry), and the second bill of sale for each automobile is dated June 18, 1984 (after the date of importation of the vehicles). Both bills of sale for each automobile indicate petitioner as the seller and the aforementioned U.S. parties as buyers (except in the case of petitioner's own automobile for which the bills of sale indicate that petitioner's attorney is the seller and petitioner is the buyer). The bills of sale dated prior to the date of importation support the conclusion that the petitioner attempted to relieve himself of liability for the non-conforming imported vehicles.

In view of the above, we find that the collective evidence in this case demonstrates that the false statements made upon entry of the subject automobiles constitute grossly negligent violations of title 19, United States Code, section 1592, in that petitioner acted with actual knowledge of or wanton disregard for the relevant facts and with indifference or disregard for his obligations under the statute. Therefore, in accordance with national mitigation guidelines involving this type of violation, the claim for monetary penalty will be remitted upon payment of $41,701.80 (which represents an amount equivalent to 40 percent of the dutiable value of the vehicles).

Please notify petitioner (through counsel) of this decision, enclosing a copy of this letter with your notification.

Sincerely,

/s/ Donald W. Lewis

G3

19 APR 1985

ENF 4-02.2 CO:R:E:C
653794 CR

653794

District Director of Customs
Houston, Texas 77052

Dear Sir:

This is in response to your memorandum dated January 17, 1985, forwarding a petition dated November 29, 1984, submitted by [redacted] on behalf of [redacted]. The petitioner seeks relief from a seizure and a claim for a monetary penalty in the amount of $26,400, assessed against petitioner for a violation of title 19, United States Code, section 1592, in your Houston District Case No. 85-5301-00011.

The penalty claim arose under section 1592 on the basis that petitioner attempted to introduce into the commerce of the United States a 1983 Mercedes Benz 300D, [redacted], by means of false and material entry documents. The entry documents were false because it was indicated therein that the Mercedes Benz 300D was being imported by a nonresident in connection with the arrival of the nonresident to be used in the United States only for the transportation of the nonresident and such incidental carriage of articles as may be appropriate to his personal use of the conveyance in accordance with item 812.30 and Schedule 8, Part 2, Subpart A, Headnote 1.(b), Tariff Schedules of the United States (TSUS), (19 U.S.C. 1202), whereas the vehicle was actually imported for commercial resale. The vehicle did not conform to Department of Transportation (DOT) nor Environmental Protection Agency (EPA) compliance standards. Furthermore, the entry documents were false because petitioner undervalued the vehicle by declaring the value to be $3,920, rather than the foreign value of $7,000. As a result, the Government suffered a loss of revenue of $189.

As we understand the facts, on October 25, 1984, petitioner presented entry documents for the release of the above-referenced Mercedes Benz. Specifically, petitioner presented documentation including:

1. Customs Form 3299, "Declaration for Free Entry of Unaccompanied Articles", which indicated that the vehicle was being imported by petitioner for personal use under item 812.30, TSUS.

2. EPA Form 3520-1, wherein block No. 5 was designated by petitioner declaring thereby that the importer or consignee is a nonresident of the United States

G4

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

importing such vehicle for personal use for not more than one year from the date of entry, and the vehicle will not be sold in the United States.

3. DOT Form, HS Form 7, wherein block No. 5 was designated by petitioner declaring thereby that he is a nonresident of the United States importing the merchandise for personal use for a period not to exceed one year from the date of entry and he will not sell it within the United States.

653794

It is reflected in the file that at the time of inspection, petitioner advised a Customs officer that he was a nonresident, was visiting the United States for about 6 months, and had brought the vehicle with him. Petitioner further stated that the vehicle had been badly damaged and had paid only 12,000 deutschmarks for it. The inspector specifically asked petitioner if he had ever previously imported a vehicle into the United States. The petitioner replied negatively. A Customs check revealed that petitioner did, in fact, import a car previously, and it had been sold.

An examination of documents in the possession of petitioner revealed a bill of sale for the previously imported vehicle, as well as several hand-written advertisements for the sale of the Mercedes Benz 300D. The Customs inspector examined the vehicle and observed that it did not comply with EPA/DOT standards, but was in excellent condition. The vehicle was seized pursuant to title 19, United States Code, section 1592, and title 18, United States Code, sections 542 and 545.

The Search/Arrest/Seizure Report, Customs Form 151, reflects that the 1983 Mercedes Benz 300D had a declared value of $3,920, a foreign value of $7,000, a domestic value of $26,400, and a loss of revenue of $189.

On November 8, 1984, a prepenalty notice was issued to petitioner in the amount of $26,400, the domestic value of the vehicle, with a tentative determination of fraud as the level of culpability. On November 29, 1984, petitioner filed a response. After considering that response, on January 17, 1984, a penalty notice was issued for $26,400 with a determination of fraud as the level of culpability. On January 28, 1985, Charles D. Ressin, a member of my staff, telephoned counsel for petitioner and advised him that petitioner had the right to make an additional submission in response to the penalty notice. Counsel was advised that in the absence of an additional submission, we would rely on the November 29, 1984, submission.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

65

653794

By letter dated March 7, 1985, counsel advised that petitioner's valuation of the $3,920 value of the vehicle was based upon the sum of money that he actually paid for the vehicle. The purchase of the vehicle was "as is" in its damaged condition.

In a telephone conversation with Mr. Ressin, counsel requested an appointment to make an oral presentation. On April 4, 1984, counsel and Mr. Ressin met and discussed the case. Counsel also presented the following:

1) a picture of the damaged vehicle;

2) purchase contract reflecting a sales price of DM 4,000;

3) estimate of repair costs of DM 26,200.93; and

4) a translated letter dated March 8, 1985, of petitioner reflecting that he paid DM 4,000 for the vehicle, and he did the repair work which cost DM 7,000, and that the car cost a total of DM 11,000 or $3,920.

We note this March 8, 1985, letter contradicts the March 7, 1985, letter because the March 7, 1985, letter indicated that the $3,920 was the sum of money paid for the vehicle, whereas the March 8, 1985, letter stated that this amount was for the purchase price and cost of repairs.

Petitioner claims: his lack of understanding of the English language places doubt on the admissibility of any statement or admission made by him and runs counter to any intent to defraud; he did not intend to import any vehicle for the purpose of a sale and denies any knowledge of having made a false material statement; he is unaware that he made any statement relative to his having previously imported a vehicle; and he insists that the vehicle had suffered extensive damage to the right front area, thereby justifying the declared value of $3,920.

Petitioner requests that if a penalty is in order, consideration be given to the following facts: that his vacation was ruined; he spent five days in jail under a great deal of apprehension due to his lack of knowledge of the English language; he was forced to spend substantial sums of money; and he is of very ill health. Petitioner asserts that under no circumstances would he ever attempt to import a vehicle

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

for any purpose. Petitioner advises that upon release of the vehicle from Customs custody, the vehicle will be returned to Germany.

Item 812.30, TSUS, provides in pertinent part for duty-free treatment of automobiles imported in connection with the arrival of a nonresident provided the automobile is to be used in the United States only for the transportation of such person and such incidental carriage of articles as may be appropriate to his personal use of the conveyance. Schedule 8, Part 2, Subpart A, Headnote 1(b) provides that if any article which has been exempted from duty under item 812.30, TSUS, is sold within 1 year after the date of importation, without prior payment to the United States of the duty which would have been payable at the time of entry if the article had been entered without the benefit of this item, such article, or its value (to be recovered from the importer), shall be subject to forfeiture. These statutory provisions have been added to the Customs Regulations as sections 148.45 and 148.46 (19 CFR 148.45, 148.46). Sections 12.73 and 12.80, Customs Regulations (19 CFR 12.73, 12.80), set forth requirements of EPA and DOT respectively relating to motor vehicle compliance standards.

Upon review of petitioner's submission and the entire file, we are unpersuaded by petitioner's claims. Concerning petitioner's claim that the vehicle was damaged, thereby justifying the lower value, we note that petitioner repaired the vehicle prior to exportation. The Customs officer examined the vehicle and found it be in excellent condition at the time of importation. Therefore, for Customs valuation purposes, we find that the appraised value of $7,000 is correct.

Petitioner states that he was unaware that he made any statement on October 25, 1984, relative to his having previously imported a vehicle. However, two Customs officers indicate that petitioner expressly stated he did not previously import a vehicle. Petitioner does concede that he did previously import a vehicle, but due to the financial hardship of his daughter, was forced to sell that vehicle. Petitioner contends that it was his understanding that his daughter and the new purchaser would report the sale. Nevertheless, Customs records indicate that petitioner had imported a vehicle into the United States and it had been sold.

Petitioner stated that he was visiting the United States for six months, entered the vehicle under item 812.30, TSUS, and denies any intent to import the Mercedes Benz 300D for the purpose of sale. However, it is reflected in the file that petitioner stated to a Customs officer that he planned

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G1

653794

653794

to import a vehicle every six months to sell for a profit, take a vacation, and return home. Furthermore, several handwritten advertisements, found in the possession of the petitioner, states:

For Sale
Mercedes Benz 300D
Year: 1983
5 Cylinder
18,000 KM
Address:

Customs Form 58 "Vehicle/Vessel/Aircraft Inventory and Receipt", reflects the following data about the seized vehicle:

Mercedes Benz 300D
Year: 1983
5 Cylinder
18,176 KM

We believe that the weight of the evidence establishes in a clear and convincing manner that petitioner intended to sell the vehicle and, therefore, he acted in a fraudulent manner, deliberately with intent to violate the Customs laws and the laws regarding the admission of a non-conforming vehicle into the United States. (Furthermore, we believe petitioner negligently undervalued the vehicle by declaring the value at $3,920). Therefore, it is our decision that the filing of false and material entry documents constitute a fraudulent violation of title 19, United States Code, section 1592. There are no Customs mitigating factors offered by petitioner which can be taken into consideration to afford the petitioner additional relief. In accordance with our national guidelines concerning this violation and DOT/EPA requirements, we conclude that the penalty claim be mitigated to $7,000, an amount equal to the dutiable value of the Mercedes Benz 300D.

The vehicle shall not be released from seizure unless the mitigated penalty amount, the loss of revenue, and storage charges incurred by Customs are paid, and petitioner agrees to export the vehicle under Customs supervision.

Please notify petitioner, through counsel, of this decision and enclose a copy of this letter with your notification. If petitioner fails to make payment timely and comply with the

G8

conditions of this decision, summary forfeiture proceedings under title 19, United States Code, section 607, (as amended by Pub. L. 98-573, October 30, 1984), should be instituted.

Sincerely,

/s/ Edward T. Rosse

Re: Petition and Offer in Compromise of [redacted] Requesting Relief from a Monetary Penalty of $153,000, Assessed Under Title 19, United States Code, Section 1592; Petitions also Filed by [redacted] and [redacted] Claiming Security Interests in Several or All Five of the Seized Vehicles

Dear Sir:

This is in reference to your memorandum dated May 13, 1985, and subsequent correspondence, concerning the above-captioned matter. The penalty was assessed for the reason that petitioner [redacted] entered five (5) vehicles with the use of entry documents which were false. The submitted invoices reflected a purchase by [redacted] company), [redacted] or a member of his family, when in fact this petitioner was not the purchaser but rather the importer and consignee. Further, petitioner falsely certified on EPA and DOT forms that the vehicles would not be sold or offered for sale prior to proper compliance with DOT/EPA requirements. In fact, the automobiles were offered for sale prior to such compliance and satisfaction of the appropriate bond. The vehicles, two (2) Mercedes-Benz automobiles and three (3) Porsches, were seized as restricted merchandise. While the false declarations and certifications reflect violations of EPA and DOT requirements, there is also a reported loss of revenue of $954.37.

On May 6, 1985, [redacted] entered into a plea agreement with the United States Attorney's Office, Middle District of Florida in connection with a criminal proceeding involving importation of these five (5) vehicles. Pursuant to the Agreement, [redacted] pled guilty to one count of conspiracy to violate title 18, United States Code, section 545.

Under the stipulation of facts, [redacted] advised that in July of 1983, he and [redacted], a German national, agreed that they would cause to be imported certain automobiles, primarily Porsches and Mercedes', into the United States for the purpose of resale, the profits to be divided between them. During the next few months at least eight (8) vehicles were imported from Germany through southern Florida. In each instance, documents were filed reflecting that the automobiles

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G10

were sold by a foreign party to persons related to the petitioner or sold to the petitioner's business. In fact, there were no actual sales between the described sellers and buyers. As stipulated, importation was effected in this manner to permit application to be made to the EPA for a once in a lifetime personal exemption allowing the importation of a foreign automobile for personal use and not for resale, without the necessity of incurring the expense of conforming the vehicles to EPA pollution standards.

[redacted] stated that this scheme was intended to facilitate the domestic sale of the vehicles. He indicated [redacted] had provided the false information to Customs and that he had instructed his agent to file information concerning the importations that would conform to the false information contained in the documents, including invoices, provided to Customs by [redacted] The latter also provided the financial resources necessary to acquire the vehicles. However, [redacted] did obtain a $60,000 loan from a bank in Pinellas County secured by two of the vehicles in order to cover the expenses of the importations.

OFFER IN COMPROMISE

In his letter of September 6, 1985, petitioner [redacted] characterizes himself as an innocent pawn in the scheme concocted by [redacted] and one [redacted] He claims that while the vehicles were offered for sale, he believed that they had been properly conformed to EPA/DOT requirements in Europe, although he began sending the cars to a domestic concern for appropriate modifications. Of the $60,000 borrowed from the [redacted], $20,000 was expended on readying the vehicles for sale and $40,000 was handed over to [redacted]

Petitioner advises that since the seizure, another case out of Miami relating to eight (8) additional automobiles has been initiated. In addition, he faces a lawsuit from the bondholder in Miami, and there is also a lawsuit pending against [redacted] by [redacted] That lawsuit has been initiated by [redacted] through [redacted]

Under the circumstances, a settlement is proposed as follows:

1. Petitioner will admit to negligence and petitioner or the proper party will be responsible for all storage costs on the five automobiles in the amount of $1.00 per day, the total of which (at this time) is approximately $1,800;

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G11

653915

65 3915

2. [redacted] and/or the proper party will be responsible for and will pay scheduled penalties for the loss of revenue;

3. [redacted] and/or the proper party will be responsible for and will pay the revenue lost as a result of the violation; and

4. Customs will release to [redacted] and/or [redacted] the five (5) automobiles. These vehicles will be conformed to EPA/DOT requirements before being offered for sale.

Regardless of the above agreement [redacted] will continue to cooperate with Customs authorities.

While the record reflects that this petitioner may not have been the initiator of the scheme, it is apparent, based on the evidence and established by the criminal conviction and stipulation of facts, that petitioner was well aware that the entry documents submitted were false, and of the consequences of such action, i.e., to evade DOT and EPA requirements. The evidence clearly demonstrates that the violation was intentional, in order to avoid the substantial expense of conforming the vehicles to United States safety and clean air standards. In this regard, we note that even if certain work had been performed on the cars in Europe, in furtherance of EPA/DOT requirements, without additional certifications in the United States such work alone would not be sufficient to satisfy these standards.

Petition of [redacted]

This petitioner, a German national now residing in the United States, claims that in June and September of 1983 she gave [redacted] and [redacted] about $180,000 for the purchase of Mercedes and Porsche automobiles. The vehicles were to be conformed to United States standards and then shipped to Florida for sale. [redacted] was promised a substantial gain on her investment.

Petitioner claims she had nothing to do with the actual importations, and was unaware of any violation of Customs law or regulation. However, she subsequently became suspicious of [redacted] and [redacted] and hired a German attorney. His investigation disclosed that there was no company called [redacted] at the address reflected on the company documents, and that the sole owner and manager was [redacted]

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC _____

G12

[redacted] initiated a civil suit in the German courts against [redacted] and came to the United States to pursue her case here. She claims an unrecorded purchase money security interest in all of the vehicles and requests that the automobiles be released.

Petition of [redacted]

This company claims that it has title to the five (5) vehicles and that title was never transferred to [redacted] that the same was admitted by [redacted] and that release of the vehicles, if made, should not be to [redacted] or [redacted] This petitioner acknowledges a certain degree of negligence in furnishing incorrect information on the entry documents, but places the primary blame for such violations upon [redacted] Further, this petitioner also claims that all of the automobiles were conformed to EPA and DOT standards in Europe. (A civil suit filed against [redacted] and [redacted] is pending in [redacted]

Petition of [redacted]

By letter dated August 20, 1985, petitioner [redacted] claims an interest in the two Porsches', as lien holder, based on promissory notes executed with security agreements dated November 4 and December 15, 1983, in the amounts of $38,529.12 and $38,582,40, respectively. This petitioner claims that petitioner [redacted] and [redacted] defaulted on the notes with remaining balances of $26,719.15, and $28,058.83.

Determination

While there is evidence that petitioner [redacted] through its agent or agents was intimately involved in the scheme to defraud the United States, we will not attempt in this forum to unscramble the legal and/or equitable rights of the parties to the vehicles. The only Customs violator of record is [redacted], and our decision regarding the penalty (and settlement offer) will only affect [redacted]

In this regard, the evidence clearly demonstrates that petitioner [redacted] was engaged in a fraudulent scheme the primary purpose of which was to evade EPA and DOT requirements. While there is a loss of revenue, we are treating the case as a non-revenue loss offense since the EPA/DOT violations were the primary reason for the scheme.

THIS DOCUMENT MAY BE RELEASED TO THE PUBLIC

G13

65 3915

653915

In cases of fraud, and a non-revenue loss violation, normal disposition under our guidelines provides for a penalty of 50 to 80 percent of dutiable value. In this case normal disposition would be $75,312, based upon a dutiable value for the five (5) vehicles of $94,140. Since [redacted] offer falls far short of this amount, it is rejected.

Accordingly, the monetary penalty is mitigated to $75,312. The vehicles will be released to [redacted] upon payment of this sum, the loss of revenue, storage costs and other expenses of seizure, and certifications from EPA and DOT to the effect that the vehicles have been conformed to the requirements of these agencies. However, you should also notify the [redacted], and [redacted] of the date, time, and place of release so that these parties may pursue their legal remedies prior to release of the vehicles.

If [redacted] fails to comply with our decision, the matter should be forwarded without delay to the Department of Justice for judicial forfeiture proceedings. (In this regard, administrative forfeiture proceedings would not be in the best interests of the Government due to the various competing interests.) Similarly, all of the interested parties should be notified of this referral so that they may assert their interests in a judicial forum.

Please advise each of the petitioners of this decision and include a copy with your notice.

Sincerely,

/s/ Edward T. Rasse
